Certification Salesforce Mule-101 Test Questions & Mule-101 Latest Exam Pass4sure

Salesforce Mule-101 Exam Questions just focus on what is important and help you achieve your goal. With high-quality Mule-101 guide materials and flexible choices of learning mode, they would bring about the convenience and easiness for you. Every page is carefully arranged by our experts with clear layout and helpful knowledge to remember.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q19-Q24):

NEW QUESTION # 19

According to MuleSoft, which system integration term describes the method, format, and protocol used for communication between two systems? 4

- **A. Interface**
- B. Interaction
- C. Component
- D. Message

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

The Interface: In system integration and MuleSoft terminology, the Interface is the contract that defines how two systems communicate. It specifies:

Protocol: How data is transmitted (e.g., HTTP, FTP, AMQP).

Format: The structure of the data (e.g., JSON, XML, CSV).

Method: The specific action (e.g., GET, POST).

Why other options are incorrect:

Message: This refers to the actual data payload (the content) being sent, not the rules of communication.

Component: This usually refers to a specific building block within the Mule flow (like a Logger or a Database connector) or a software module, not the communication definition itself.

Interaction: This describes the act of communicating, not the definition of the standard used.

NEW QUESTION # 20

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load.

- A. Down
- B. Vertical
- C. Horizontal
- D. Diagonal

Answer: C

Explanation:

Horizontal Scaling (Scale Out): This involves adding more instances (replicas/nodes) of a resource to handle increased load. In a Kubernetes or Runtime Fabric context, when the controller adds another "pod replica," it is strictly defined as horizontal scaling.

Vertical Scaling (Scale Up): This would involve increasing the size (CPU or RAM capacity) of an existing single instance/pod, rather than adding more copies of it.

Context: MuleSoft's Runtime Fabric (RTF) runs on Kubernetes and leverages this horizontal auto-scaling capability to maintain performance under high traffic.

NEW QUESTION # 21

What are two reasons why a typical Mulesoft customer favors a Mulesoft-hosted Anypoint platform runtime plane over a customer-hosted runtime for its Mule application deployments?

- A. Reduced IT operations effort
- B. Reduced time-to-market for the first application
- C. Increased application throughput
- D. Reduced application latency
- E. Increased application isolation

Answer: A,B

Explanation:

MuleSoft-Hosted Runtime (CloudHub): This is an Integration Platform as a Service (iPaaS) model where MuleSoft manages the infrastructure.

Reduced IT Operations Effort (Option A): Because MuleSoft manages the physical servers, operating system updates, and patching, the customer's IT team does not need to maintain the hardware or VM infrastructure.

Reduced Time-to-Market (Option D): With a pre-configured environment ready for deployment, teams can deploy applications immediately without waiting for the provisioning of on-premises servers, load balancers, or network configurations.

NEW QUESTION # 22

An integration architect is designing an API that must accept requests from API clients for both XML and JSON content over HTTP/1.1 by default.

- A. GraphQL
- B. gRPC

- C. SOAP
- **D. REST**

Answer: D

Explanation:

REST (Representational State Transfer): REST is an architectural style that allows resources to be represented in multiple formats (Media Types)5555.

Versatility: Unlike SOAP (which is strictly XML), a RESTful API can easily support both JSON and XML representations of the same resource, often determined by the Accept or Content-Type headers.

Why others are incorrect:

SOAP: Strictly uses XML.

GraphQL: Typically uses JSON for both queries and responses.

gRPC: Uses Protocol Buffers (binary), not human-readable JSON/XML by default.

NEW QUESTION # 23

What is a core pillar of the MuleSoft Catalyst delivery approach?

- A. Process thinking
- B. Technology centralization
- **C. Business outcomes**
- D. Scope reduction

Answer: C

Explanation:

MuleSoft Catalyst Pillars: The Catalyst methodology is built on three core pillars designed to drive successful digital transformation:

Business Outcomes: Defining clear KPIs and aligning technology with business goals6.

Technology Delivery: The actual implementation (Anypoint Platform).

Organizational Enablement: Building the C4E and training the team.

The Answer: "Business outcomes" is the only option listed that corresponds to one of these

NEW QUESTION # 24
