Salient Features of Salesforce Identity-and-Access-Management-Architect Web-Based Practice Test Software

We believe that the greatest value of Identity-and-Access-Management-Architect study materials lies in whether it can help candidates pass the examination, other problems are secondary. And at this point, our Identity-and-Access-Management-Architect study materials do very well. We can proudly tell you that the passing rate of our Identity-and-Access-Management-Architect Study Materials is close to 100 %. That is to say, almost all the students who choose our products can finally pass the exam. We are not exaggerating because this conclusion comes from previous statistics.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q135-Q140):

NEW QUESTION # 135

Universal containers (UC) has an e-commerce website while customers can buy products, make payments, and manage their accounts. UC decides to build a customer Community on Salesforce and wants to allow the customers to access the community for their accounts without logging in again. UC decides to implement ansp-Initiated SSO using a SAML-BASED complaint IDP. In this scenario where salesforce is the service provider, which two activities must be performed in salesforce to make sp-Initiated SSO work? Choose 2 answers

- A. Set up my domain
- B. Configure SAML SSO settings.
- C. Create a connected App
- D. Configure Delegated Authentication

Answer: A,B

NEW QUESTION # 136

Which two are valid choices for digital certificates when setting up two-way SSL between Salesforce and an external system. Choose 2 answers

- A. Use a trusted CA-signed certificate for salesforce and a trusted CA-signed cert for the external system
- B. Use a trusted CA-signed certificate for salesforce and a self-signed cert for the external system
- C. Use a self-signed certificate for salesforce and a trusted CA-signed cert for the external system
- D. Use a self-signed certificate for salesforce and a self-signed cert for the external system

Answer: C,D

Explanation:
Explanation
Two-way SSL is a method of mutual authentication between two parties using digital certificates. A digital certificate is an electronic document that contains information about the identity of the certificate owner and a public key that can be used to verify their signature. A digital certificate can be either self-signed or CA-signed. A self-signed certificate is created and signed by its owner, while a CA-signed certificate is created by its owner but signed by a trusted Certificate Authority (CA). For setting up two-way SSL between Salesforce and an external system, two valid choices for digital certificates are:
Use a self-signed certificate for Salesforce and a self-signed certificate for the external system. This option is simple and cost-effective, but requires both parties to trust each other's self-signed certificates explicitly.
Use a self-signed certificate for Salesforce and a trusted CA-signed certificate for the external system.
This option is more secure and reliable, but requires Salesforce to trust the CA that signed the external system's certificate implicitly.

NEW QUESTION # 137

An architect has successfully configured SAML-BASED SSO for universal containers. SSO has been working for 3 months when Universal containers manually adds a batch of new users to salesforce. The new users receive an error from salesforce when trying to use SSO. Existing users are still able to successfully use SSO to access salesforce. What is the probable cause of this behaviour?

- A. The Federation ID field on the new user records is not correctly set
- B. The new users do not have the SSO permission enabled on their profiles.

- C. The my domain capability is not enabled on the new user's profile.
- D. The administrator forgot to reset the new user's salesforce password.

Answer: A

Explanation:
Explanation
The Federation ID field on the new user records is not correctly set is the probable cause of this behavior. The Federation ID is an additional field contained in the Salesforce interface that allows admins to pick whatever username or username format they want to pass to Salesforce from their user directory for single sign-on. This field does not appear on the user page layout editor or on the user record page by default, and it must be populated with a unique value that matches the identity provider's assertion for each user. If the Federation ID is missing or incorrect, the SSO will fail. The administrator does not need to reset the new user's Salesforce password, as SSO bypasses the password authentication. The My Domain capability is not enabled on the new user's profile, but on the org level, so it does not affect individual users. The new users do not have the SSO permission enabled on their profiles is not a valid option, as there is no such permission in Salesforce.
References: Certification - Identity and Access Management Architect - Trailhead, Federation ID field on User detail page is not visible, What is the purpose of Salesforce SSO by federation ID?

NEW QUESTION # 138
Universal containers wants to set up SSO for a selected group of users to access external applications from salesforce through App launcher. Which three steps must be completed in salesforceto accomplish the goal?

- A. Associate user profiles with the connected Apps.
- B. Complete single Sign-on settings in security controls.
- C. Create namedcredentials for each external system.
- D. Complete my domain and Identity provider setup.
- E. Create connected apps for the external applications.

Answer: A,D,E

Explanation:
To set up SSO for a selected group of users to access external applications from Salesforce through App Launcher, UC must complete the following steps in Salesforce:
* Associate user profiles with theconnected apps. A connected app is a framework that enables an external application to integrate with Salesforce using APIs and standard protocols, such as SAML, OAuth, and OpenID Connect3. To access a connected app, usersmust have the appropriate permissions assigned to them, either through their profile or a permission set4. UC can associate user profiles with the connected apps to control which users can access which apps.
* Complete My Domain and identity provider setup. My Domain isa feature that lets UC create a custom domain name for their Salesforce org. It is required for setting up SSO with external identity providers.
An identity provider is a trusted system that authenticates users for other service providers. UC must set up an identity provider that supports SSO protocols such as SAML or OpenID Connect and configure it to communicate with Salesforce.
* Create connected apps for the external applications. UC must create connected apps for each external application that they wantto access from Salesforce through App Launcher. A connected app defines the attributes of the external application, such as its name, logo, description, and callback URL4. It also specifies the SSO protocol and settings thatare used to authenticate users and grant access tokens4.

[Identity Providers and Service Providers]

NEW QUESTION # 139
A technology enterprise is setting up an identity solution with an external vendors wellness application for its employees. The user attributes need to be returned to the wellness application in an ID token.
Which authentication mechanism should an identity architect recommend to meet therequirements?

- A. JWT Bearer Token Flow
- B. Web Server Flow
- C. User Agent Flow
- D. OpenID Connect

Answer: D

Explanation:
OpenID Connect is an authentication protocol that allows a service provider to obtain user attributes in an ID token from an IdP.
The other flows areOAuth 2.0 flows that are used for authorization, not authentication.
References: Configure an Authentication Provider Using OpenID Connect, Integrate Service Providers as Connected Apps with OpenID Connect

NEW QUESTION # 140
......

According to the survey, the candidates most want to take Salesforce Identity-and-Access-Management-Architect test in the current IT certification exams. Of course, the Salesforce Identity-and-Access-Management-Architect certification is a very important exam which has been certified. In addition, the exam qualification can prove that you have high skills. However, like all the exams, Salesforce Identity-and-Access-Management-Architect test is also very difficult. To pass the exam is difficult but VerifiedDumps can help you to get Salesforce Identity-and-Access-Management-Architect certification.
