## SAP C\_S4CS\_2302 Premium Files & C\_S4CS\_2302 Vce Exam

Our SAP C\_S4CS\_2302 practice exam simulator mirrors the SAP C\_S4CS\_2302 exam experience, so you know what to anticipate on Certified Application Associate - SAP S/4HANA Cloud public edition - Sales day. Our SAP C\_S4CS\_2302 practice test software features various question styles and levels, so you can customize your SAP C\_S4CS\_2302 Exam Questions preparation to meet your needs.

Free PDF Quiz 2023 SAP C\_S4CS\_2302: Certified Application Associate - SAP S/4HANA Cloud public edition - Sales Marvelous Examcollection Questions Answers

In fact, passing C-S43-2601 certification exam is just a piece of cake! But in realistic society, some candidates always say that this is difficult to accomplish. Therefore, C-S43-2601 certification has become a luxury that some candidates aspire to. When the some candidates through how many years attempted to achieve a goal to get C-S43-2601 Certification, had still not seen success hope, candidate thought always depth is having doubts unavoidably bog: can I get C-S43-2601 certification? When can I get C-S43-2601 certification? In this a succession of question behind, is following close on is the suspicion and lax.

Do you want to have a new change about your life? If your answer is yes, it is high time for you to use the C-S43-2601 question torrent from our company. As the saying goes, opportunities for those who are prepared. If you have made up your mind to get respect and power, the first step you need to do is to get the C-S43-2601 Certification, because the certification is a reflection of your ability. If you have the C-S43-2601 certification, it will be easier for you to get respect and power. Our company happened to be designing the C-S43-2601 exam question.

## SAP C-S43-2601 Exam Questions-Shortcut To Success

Nowadays the competition in the society is fiercer and if you don't have a specialty you can't occupy an advantageous position in the competition and may be weeded out. Passing the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) test certification can help you be competent in some area and gain the competition advantages in the labor market. If you buy our C-S43-2601 Study Materials you will pass the test smoothly. With a high pass rate as 98% to 100%, you will know that our C-S43-2601 practice engine can provide you with the best pass percentage.

## **SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q10-Q15):**

### **NEW QUESTION # 10**

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- \* Display the automatically created Inspection Lot
- \* Record Inspection Results
- \* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
  - Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

### **Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- \* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- \* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- \* Verify the Following Data :
- \* Material : T-PM1100
- \* Plant : 1010
- \* Inspection Lot Origin : 89 (Miscellaneous)
- \* Group : CL-DE-00
- \* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- \* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- \* Select the Lot : Enter your inspection lot number and click Execute .
- \* Record Results :
- \* Enter the inspection values for each characteristic listed in the checklist.
- \* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- \* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- \* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

### **NEW QUESTION # 11**

Task: 5

Configure and create a Maintenance Notification

The project team evaluates during the implementation project the Maintenance Notifications in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Configure and create a Maintenance Notification
- \* Assign catalog specific data to a Maintenance Notification
- \* Create a Maintenance Notification and save it. Use the following information:
- \* Assign the following data to the just created notification:

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 5 Overview

The project team is evaluating Maintenance Notifications in SAP S/4HANA Asset Management. This task involves creating a notification and assigning catalog-specific data to it.

Step 1: Create the Maintenance Notification

In this step, you will record a technical problem in the system.

\* Access the Transaction : Use transaction code IW21 (Create Maintenance Notification) in the SAP GUI or the corresponding Fiori app.

\* Initial Screen :

\* Notification Type : Enter Z1 .

\* Press Enter .

\* Enter General Data :

\* Description : Enter Pump is leaking .

\* Priority : Select High .

\* Equipment : Enter T-PA48 .

\* Save : Click the Save (floppy disk) icon to generate a notification number.

Explanation : Creating a notification is the first step in the maintenance process. It documents the "what" (leaking pump), the "how critical" (high priority), and the "where" (Equipment T-PA48).

Step 2: Assign Catalog Specific Data

Now you must assign technical codes to describe the damage precisely for future reporting and analysis.

\* Access the Transaction : Use transaction code IW22 (Change Maintenance Notification) to open your recently created notification.

\* Navigate to Item Data : Go to the Items tab or the relevant section for damage and causes.

\* Enter Damage Details :

\* Damage Code Group : PMP-100 .

\* Damage Code : 1000 .

\* Description : Leaking .

\* Enter Object Part Details :

\* Object Part Code Group : PMP-Z48 .

\* Object Part Code : 1001 .

\* Description : Inlet/Outlet .

\* Enter Cause Details :

\* Cause Code Group : PMP-248 .

\* Cause Code : 2000 .

\* Description : Material fatigue .

\* Save : Click the Save icon to finalize the notification.

Explanation : Assigning catalog data categorizes the issue using standardized codes. This allows the company to run "Bad Actor" reports later to see, for example, how many pumps are failing due to "Material fatigue" versus "Operator error".

□

**NEW QUESTION # 12**

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

\* Transaction : Enter IP02 (Change Maintenance Plan).

\* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

\* Scheduling Parameters Tab :

\* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

\* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

\* Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

\* Transaction : Enter IP10 (Schedule Maintenance Plan).

\* Maintenance Plan : Enter your plan number and press Enter .

\* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start ).

\* Enter the "Start Date" / "Completion Date" :

\* The Rule : You must use Today's date minus 4 weeks .

\* Example: If today is April 19, enter March 22.

\* Press Enter . The system will calculate the next calls.

\* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

\* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

\* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

\* Check the following three items :

\* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

\* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

\* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

**NEW QUESTION # 13**

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

\* Assign a class to a Technical Object

\* Assign characteristic values to a class

\* Assign class EQ11 value to Technical Object T-PA## .

\* Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

\* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

\* Equipment : Enter T-PA48 .

\* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

\* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

\* Class Assignment :

\* Class Type : Ensure this is set to 002 (Equipment Class).

\* Class : Enter EQ11 .

\* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

\* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

\* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

\* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.

\* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

\* Action : Click the Save (floppy disk) icon.

\* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

#### NEW QUESTION # 14

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400 ). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the

SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (###)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ### in all instructions.

How to find your number:

\* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

\* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

\* System : T41

\* Client : 400

\* User Name/ID : S43900-### (e.g., if your group number is 10, use S43900-10)

\* Password : Welcome1

Connection Methods:

\* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

\* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

\* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

\* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

\* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.
