If you didn't pass Order-Management-Administrator exam, we guarantee you will get full refund.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q94-Q99):

NEW QUESTION # 94

A customer wants to change the layout of the out of the box Order Summary Lightning Record Page to three columns instead of two. How can an administrator satisfy this requirement?

- **A. Edit the Lightning Record Page and change the Template to Three Regions**
- B. Create a new Lightning Record Page and select the Three Regions template
- C. Add another column component to the existing Lightning Record Page
- D. Change the page layout template to Three Regions in the layout editor

Answer: A

Explanation:

The best way for the administrator to satisfy this requirement is to edit the Lightning Record Page and change the Template to Three Regions. A Lightning Record Page is a type of page that displays details and related information about a specific record in Lightning Experience or Salesforce mobile app. A Lightning Record Page can be customized using the Lightning App Builder, which is a tool that allows administrators to drag and drop components onto a page layout. A Template is a predefined layout that determines how components are arranged on a page. A Three Regions template is a type of template that divides the page into three columns or regions. The administrator can edit the Lightning Record Page for the Order Summary object, and change the Template to Three Regions in the Lightning App Builder. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.lightning_app_builder_customize_lex_pages.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.lightning_app_builder_templates.htm&type=5

NEW QUESTION # 95

An administrator is encountering errors when reusing a composite API call to load test orders via the Workbench. What are three possible causes of this issue?

- **A. The number of subrequests in the JSON query exceeds the 20 subrequest limit**
- B. The Administrator has logged into the wrong environment in Workbench
- **C. The administrator has duplicate Product SKUs in the JSON query**
- **D. Record IDs used within the request are incorrect**
- E. The administrator is creating multiple objects in a single JSON query

Answer: A,C,D

Explanation:

Three possible causes of this issue are:

The administrator has duplicate Product SKUs in the JSON query. A Product SKU is a unique identifier for a product that is used to track inventory and sales. A Product SKU must be unique within an org, and it cannot be duplicated in a composite API call. If the administrator has duplicate Product SKUs in the JSON query, it will cause an error when loading test orders via the Workbench.

The number of subrequests in the JSON query exceeds the 20 subrequest limit. A subrequest is a single HTTP request that is part of a composite API call. A composite API call can contain up to 20 subrequests in a single JSON body. If the administrator has more than 20 subrequests in the JSON query, it will cause an error when loading test orders via the Workbench.

Record IDs used within the request are incorrect. A record ID is a unique identifier for a record that is used to reference and manipulate data in Salesforce. A record ID must be valid and exist in the org, and it must match the data type and format of the corresponding field. If the administrator has incorrect record IDs in the JSON query, such as using 15-character IDs instead of 18-character IDs, or using IDs from a different org, it will cause an error when loading test orders via the Workbench.

NEW QUESTION # 96

An administrator is creating a flow to manage order fulfillment. The administrator creates a fault path to handle a possible error. What object record should the administrator create in the fault path to notify users of an error?

- A. Order Summary Exception
- **B. Process Exception**
- C. Fulfillment Error
- D. Order Error

Answer: B

Explanation:

The object record that the administrator should create in the fault path to notify users of an error is Process Exception. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. Verified Reference:

https://help.salesforce.com/s/articleView?id=sf.order_management_process_exception.htm&type=5

NEW QUESTION # 97

An administrator needs to import Order Summary records containing historical data but does not want them to be actioned on by Order Management. Which feature supports this use case?

- A. Custom checkbox
- B. Order Management Type Picklist
- C. Order Life Cycle Type Picklist
- **D. Unmanaged Order Checkbox**

Answer: D

Explanation:

The feature that supports this use case is the Unmanaged Order Checkbox. This is a standard field on the Order Summary object that indicates whether the order is managed by Order Management or not. If this field is checked, then the order is not actioned on by Order Management, and it does not trigger any flows or processes. The administrator can use this field to import Order Summary records containing historical data without affecting the order lifecycle. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.order_management_order_summary.htm&type=5

NEW QUESTION # 98

A customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management. Later, the customer returns one of the products. Which objects will be created in Order Management?

- A. The Order Summary object and Change Order object
- **B. A Return Order object and Change Order object**
- C. A Cancel Order object and Return Order object
- D. A Change Order object and Cancel Order Object

Answer: B

Explanation:

The objects that will be created in Order Management when a customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management, and then returns one of the products are:

A Return Order object. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.

A Change Order object. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type, status, date, etc. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.order_management_return_order.htm&type=5
