の面が完璧です。

EC-COUNCIL EC-Council Certified CISO (CCISO) 認定 712-50 試験問題 (Q310-Q315):

質問 # 310

Which of the following methods are used to define contractual obligations that force a vendor to meet customer expectations?

- A. Key Performance Indicators (KPI)
- B. Terms and Conditions
- C. Statements of Work
- **D. Service Level Agreements (SLA)**

正解: D

質問 # 311

The remediation of a specific audit finding is deemed too expensive and will not be implemented. Which of the following is a TRUE statement?

- A. The audit finding is incorrect
- **B. The asset being protected is less valuable than the remediation costs**
- C. The asset is more expensive than the remediation
- D. The remediation costs are irrelevant; it must be implemented regardless of cost.

正解: B

質問 # 312

Which of the following is a common technology for visual monitoring?

- **A. Closed circuit television**
- B. Open circuit television
- C. Blocked video
- D. Local video

正解: A

解説:

Closed Circuit Television (CCTV) is the most common technology used for visual monitoring. It is widely employed in security systems for surveillance in both private and public settings. CCTV systems transmit video signals to specific monitors for observation and recording, making them "closed" in nature, as opposed to open systems accessible to a broader audience. Options like "Open circuit television" or "Blocked video" are incorrect as they do not refer to standard technologies.

質問 # 313

A newly-hired CISO needs to understand the organization's financial management standards for business units and operations. Which of the following would be the best source of this information?

- A. The Chief Financial Officer (CFO)
- **B. The managers of the accounts payables and accounts receivables teams**
- C. The external financial audit service
- D. The internal accounting department

正解: B

解説:

The Chief Financial Officer (CFO) is the best source for understanding the organization's financial management standards. The CFO

oversees the financial strategies, policies, and compliance frameworks of the organization, making them the most authoritative source. While the internal accounting department (A) and audit services (C) provide specific insights, they lack the overarching strategic perspective of the CFO.
Managers of accounts payable/receivable teams (D) focus on transactional aspects rather than comprehensive financial standards.

質問 # 314

Which of the following is the MOST effective approach to secure physical hardware?

- A. Configure hypervisors for maximum protection
- B. Distribute management by location
- **C. Centrally manage assets and controls**
- D. Assign clusters of administrators

正解: C

解説:

Comprehensive and Detailed Explanation (250-350 words)

According to EC-Council CCISO documentation, the most effective approach to securing physical hardware is to centrally manage assets and security controls.

Centralized management enables consistent enforcement of physical security standards, asset tracking, access control, monitoring, and incident response. CCISO materials emphasize that centralized oversight reduces gaps, improves accountability, and supports enterprise-wide risk management.

Configuring hypervisors (Option A) addresses virtual environments, not physical hardware. Assigning administrator clusters (Option C) and distributing management by location (Option D) increase complexity and reduce visibility.

CCISO governance guidance stresses that centralized asset and control management is foundational to effective physical security programs.

Therefore, Option B is correct.

質問 # 315
