In every area, timing counts importantly. With the advantage of high efficiency, our Professional-Cloud-Developer practice materials help you avoid wasting time on selecting the important and precise content from the broad information. In such a way, you can confirm that you get the convenience and fast. By studying with our Professional-Cloud-Developer Real Exam for 20 to 30 hours, we can claim that you can get ready to attend the Professional-Cloud-Developer exam.

Google Professional-Cloud-Developer Exam is a certification that validates a developer's expertise in building and deploying applications on the Google Cloud Platform (GCP). Google Certified Professional - Cloud Developer certification is ideal for software developers who want to demonstrate their proficiency in Google Cloud technologies, including App Engine, Compute Engine, Kubernetes Engine, and Cloud Functions. By passing the exam, developers can demonstrate their ability to design, develop, deploy, and manage scalable and reliable cloud applications on GCP.

Quiz Google - Pass-Sure Valid Professional-Cloud-Developer Braindumps

The pass rate is 98.75%, and we can ensure you pass the exam successfully if you buy Professional-Cloud-Developer exam braindumps from us. Most candidates can pass the exam just one time. And we ensure you that if you can't pass the exam, you just need to send us the failure scanned, we will refund your money. We can ensure you that your money can receive rewards. In addition, we have three versions for Professional-Cloud-Developer Training Materials, and you can buy the most suitable in accordance with your own needs.

Google Certified Professional - Cloud Developer Sample Questions (Q349-Q354):

NEW QUESTION # 349

Wendell explains that his iPhone X is dropping calls. Which of the following is an open question that would best help you further evaluate the issue with Wendell?

- A. Are you in an elevator or a parking garage when the iPhone drops the calls?
- **B. Could you please tell me about the situations when your iPhone drops calls?**
- C. Do you find that you are driving in a car when these dropped calls occur?
- D. How is the rest of your experience with the iPhone, aside from the dropped calls?

Answer: B

NEW QUESTION # 350

You need to migrate an internal file upload API with an enforced 500-MB file size limit to App Engine. What should you do?

- A. Use FTP to upload files.
- B. Change the API to be a multipart file upload API.
- C. Use CPanel to upload files.
- **D. Use signed URLs to upload files.**

Answer: D

Explanation:

NEW QUESTION # 351

You deployed a new application to Google Kubernetes Engine and are experiencing some performance degradation. Your logs are being written to Cloud Logging, and you are using a Prometheus sidecar model for capturing metrics. You need to correlate the metrics and data from the logs to troubleshoot the performance issue and send real-time alerts while minimizing costs. What should you do?

- A. Create custom metrics from the Cloud Logging logs, and use Prometheus to import the results using the Cloud Monitoring REST API.
- B. Export the Cloud Logging logs and stream the Prometheus metrics to BigQuery. Run a recurring query to join the results, and send notifications using Cloud Tasks.
- **C. Export the Prometheus metrics and use Cloud Monitoring to view them as external metrics. Configure Cloud Monitoring to create log-based metrics from the logs, and correlate them with the Prometheus data.**
- D. Export the Cloud Logging logs and the Prometheus metrics to Cloud Bigtable. Run a query to join the results, and analyze in Google Data Studio.

Answer: C

Explanation:

https://cloud.google.com/stackdriver/docs/solutions/gke/prometheus#viewing_metrics

NEW QUESTION # 352

Your company recently modernized their monolith ecommerce site to a microservices application in GKE. Your team uses Google Cloud's operations suite for monitoring and logging. You want to improve the logging indexing and searchability in Cloud Logging across your microservices with the least amount of effort. What should you do?

- **A. Update your microservices code to emit logs in JSON format.**
- B. Ask the SRE team to enable Managed Service for Prometheus on your GKE cluster.
- C. Instrument your microservices code with OpenTelemetry libraries.

- D. Reconfigure your applications to write logs to an emptyDir volume. Configure a sidecar agent to read the logs and send them to the Cloud Logging API.

Answer: A

Explanation:

JSON-formatted logs are structured logs that make indexing and searching easier in Cloud Logging. Cloud Logging can automatically parse JSON logs, which allows for better indexing, querying, and filtering capabilities. By emitting logs in JSON format, you improve the searchability and organization of logs across your microservices with minimal code changes, as JSON logs provide structure to log entries without requiring additional services or configurations.

Options like enabling Managed Service for Prometheus or instrumenting with OpenTelemetry are useful for monitoring and metrics, but they don't specifically improve log indexing and searchability in Cloud Logging.

NEW QUESTION # 353

You are designing a Node.js-based mobile news feed application that stores data on Google Cloud. You need to select the application's database. You want the database to have zonal resiliency out of the box, low latency responses, ACID compliance, an optional middle tier, semi-structured data storage, and network-partition-tolerant and offline-mode client libraries. What should you do?

- A. Configure Cloud SQL and use the Google Client Library for Cloud SQL in the app.
- B. Configure Bigtable and use the Bigtable client in the app.
- C. Configure BigQuery and use the BigQuery REST API in the app.
- **D. Configure Firestore and use the Firestore client library in the app.**

Answer: D

Explanation:
