The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

What Business Architecture concept is most related to an information Map?

- A. Heat Map
- **B. Business Capability Map**
- C. Value Stream Map
- D. Organization Map

Answer: B

Explanation:

An information map is most closely related to a Business Capability Map in the sense that both are tools used to visualize and understand different aspects of an enterprise's architecture. While an information map focuses on the relationships and flow of information within the organization, a Business Capability Map outlines the abilities and capacities the business possesses. Both are used to analyze and design architectures that support the business's objectives.

NEW QUESTION # 17

Which of the following Business Architecture concepts should the architect examine and search for when developing the Architecture Vision?

- A. Architecture Principles, Business Goals
- **B. Organization Map, Business Capabilities**
- C. Implementation Factor Catalog, Business Value Assessment Matrix
- D. Architecture Continuum, Architecture Repository

Answer: B

Explanation:

In developing an Architecture Vision within TOGAF, the architect should examine and search for foundational Business Architecture concepts to ensure that the enterprise architecture is aligned with the organization's strategy and delivers value to stakeholders. Here's a detailed breakdown of the relevant Business Architecture concepts that need to be examined in this context:

* Business Capabilities Business Capabilities represent the core abilities or capacities of an organization that allow it to achieve specific purposes or outcomes. In TOGAF, identifying and analyzing Business Capabilities helps architects understand the organization's functional strengths and gaps. This examination provides insight into which capabilities are critical for achieving strategic goals and how they may need to evolve to support the target architecture.

* Value Streams Value Streams depict the end-to-end processes that deliver value to customers, stakeholders, or end users. By identifying Value Streams, the architect can understand how value is created and delivered, ensuring that architecture decisions support these value-generating processes.

Value Streams in TOGAF are integral to identifying areas where improvements, efficiencies, or innovations can be applied, enhancing the organization's ability to meet its strategic objectives.

* Organization Maps Organization Maps outline the relationships between various entities within the enterprise, including internal departments, partners, and stakeholders. These maps provide a structural overview, showing the formal and informal relationships that influence how work is conducted across the organization. In the Architecture Vision phase, Organization Maps help architects understand organizational dependencies, stakeholder concerns, and potential alignment issues between business units.

Application in the Architecture Vision Phase:

By examining these concepts-Business Capabilities, Value Streams, and Organization Maps-the architect can gain a comprehensive understanding of the current state of the business and how it is structured to deliver value. This analysis is essential for setting a realistic and strategically aligned vision that addresses core business needs and prepares the organization for future growth and transformation.

TOGAF References:

* TOGAF Standard, Architecture Vision Phase

* TOGAF Business Architecture guidelines on Business Capabilities, Value Streams, and Organization Mapping

NEW QUESTION # 18

Consider the following descriptions of deliverables consumed and produced across the TOGAF ADM cycle.

□ Complete the sentence. Deliverable 1 Is an output from the _____, deliverable 2 is a companion to the _____

- A. Phase A, Request for Architecture Work
- **B. Phase A, Architecture Principles**
- C. Preliminary Phase, Architecture Definition Document
- D. Preliminary Phase, Architecture Requirements Specification

Answer: B

NEW QUESTION # 19

Consider the following Business Capability Example:

□ Which of the following are A and C?

- A. Organization. Data.
- B. Actors, Actions.
- C. Who. What.
- **D. Roles, Information.**

Answer: D

Explanation:

According to the TOGAF Business Capabilities Guide V2, a business capability is defined as "the expression or the articulation of the capacity, materials, and expertise an organization needs in order to perform core functions"⁵. A business capability can be decomposed into four elements: roles, information, processes, and technology⁵. In the given example, A represents roles and C represents information.

In the context provided in the image, 'A' refers to the roles involved in the recruitment management process, which in this case is the 'User: Recruiter' and the 'Stakeholders: Manager, Candidate Employee'. 'C' refers to the information or data aspects of the process, which includes 'Candidate/Applicant Details', 'Position Descriptions', 'Recruitment Agency Data', and 'Industry Standard Role Definitions'. Thus, 'A' corresponds to 'Roles' and 'C' to 'Information'.

NEW QUESTION # 20

Complete the sentence. The architecture domains that are considered by the TOGAF standard as subsets of an overall enterprise architecture are Business, Technology,

- A. Information and Data
- B. Capability and Segment
- C. Logical and Physical
- **D. Application and Data**

Answer: D

Explanation:

In the TOGAF framework, the architecture domains considered as subsets of an overall enterprise architecture are Business, Technology, Application, and Data. Here's a detailed explanation:

* TOGAF Architecture Domains:

* Business Architecture: Describes the business strategy, governance, organization, and key business processes.

* Data Architecture: Defines the structure of an organization's logical and physical data assets and data management resources.

* Application Architecture: Provides a blueprint for the individual applications to be deployed, their interactions, and their relationships to the core business processes of the organization.

* Technology Architecture: Describes the logical software and hardware capabilities that are required to support the deployment of business, data, and application services.

* Importance of Each Domain:

* Business Architecture: Aligns the architecture with the business strategy and goals.

* Data Architecture: Ensures that data is structured and managed to support business processes and decisions.

* Application Architecture: Ensures that applications are designed and integrated to support business processes.

* Technology Architecture: Provides the technology infrastructure needed to support applications and data management.

* TOGAF References:

* Phase B: Business Architecture: Focuses on developing the Business Architecture.

* Phase C: Information Systems Architectures: This phase includes both Data Architecture and Application Architecture.

* Phase D: Technology Architecture: Focuses on developing the Technology Architecture.

In summary, the TOGAF standard considers Business, Technology, Application, and Data as the architecture domains that are subsets of an overall enterprise architecture.
