CPC-CDE-RECERT Test Sample Online - CPC-CDE-RECERT Reliable Exam Vce

The price of CyberArk CPC-CDE-RECERT updated exam dumps is affordable. You can try the free demo version of any CyberArk CPC-CDE-RECERT exam dumps format before buying. For your satisfaction, It-Tests gives you a free demo download facility. You can test the features and then place an order.

CyberArk CDE-CPC Recertification Sample Questions (Q12-Q17):

NEW QUESTION # 12

Before installing the Privilege Cloud Connector using Connector Management, which network rules should be in place?

- A. VaultConnectivity: Privilege Cloud backend Port 1858
TunnelConnectivity: Secure Tunnel Port 22
CustomerPortalConnectivity: Port 3389
- B. TunnelConnectivity: Secure Tunnel Port 443
CustomerPortalConnectivity: Port 5589
- C. VaultConnectivity: Privilege Cloud backend Port 1858
TunnelConnectivity: Secure Tunnel Port 443
CustomerPortalConnectivity: Port 443
- D. VaultConnectivity: Privilege Cloud backend Port 1858
TunnelConnectivity: Secure Tunnel Port 5589

Answer: C

Explanation:

CyberArk's Connector Management prerequisites check defines the exact network connectivity rules that must pass before installation:

- * VaultConnectivity # Connect to the Privilege Cloud backend on TCP 1858
- * TunnelConnectivity # Connect to the Secure Tunnel on TCP 443
- * CustomerPortalConnectivity # Connect to the service backend URL on TCP 443 This matches option A exactly.

NEW QUESTION # 13

Your customer is using Privilege Cloud Shared Services. What is the correct CyberArk Vault address for this customer?

- A. carkvlt-<subdomain> privilegecloud.cyberark.cloud
- **B. vault-<subdomain>.privilegecloud.cyberark.cloud**
- C. carkvault-<subdomain>.privilegecloud.cyberark.cloud
- D. v-<subdomain>.privilegecloud.cyberark.cloud

Answer: B

Explanation:

For customers using CyberArk Privilege Cloud Shared Services, the correct format for the CyberArk Vault address is:

* vault-<subdomain>.privilegecloud.cyberark.cloud (Option B). This format is used to access the vault services provided by CyberArk in the cloud environment, where <subdomain> is the unique identifier assigned to the customer's specific instance of the Privilege Cloud.

Reference: CyberArk's Privilege Cloud documentation provides details on how to access various services, including the vault. The standard naming convention for accessing the vault services in the cloud typically follows this format.

NEW QUESTION # 14

During CPM hardening, which locally created users are granted Logon as a Service rights in the local group policy? (Choose 2.)

- A. CPMSERVICEACCOUNT
- **B. PasswordManagerUser**
- **C. ScammerUser**
- D. PasswordManager
- E. PluginManagerUser

Answer: B,C

Explanation:

<https://docs.cyberark.com/privilege-cloud-standard/latest/en/content/pas%20inst/cpm-hardening-task-descriptions.htm?highlight=cpm%20hardening%20accounts#AdduserstoLocalgroupolicySecuritysettings>

NEW QUESTION # 15

A support team has asked you to provide the previous password for an account that had its password recently changed by the CPM. In which tab within the account's overview page can you retrieve this information?

- A. Details
- B. Overview
- **C. Versions**
- D. Activities

Answer: C

Explanation:

To retrieve the previous password for an account that had its password changed by the CPM, you should look under the Versions tab within the account's overview page. This tab maintains a history of password changes, including previous passwords, along with other historical data points that allow for tracking changes over time. This feature is critical for auditing and rollback purposes in environments where knowing past credentials is necessary for troubleshooting or compliance.

NEW QUESTION # 16

Before you can delete a Safe, you must first delete all of its content (accounts and files) permanently. What else must also be achieved before the Safe can be successfully deleted?

- A. The version retention period has expired for all files.
- B. The "Save account versions for a period of:" has been set to 0 within the Safe version retention settings.
- C. The associated CPM user has been removed from the Safe.
- D. The Safe owners have been removed from the Safe membership.

Answer: A

Explanation:

CyberArk states that a Safe can be deleted only after its contents are deleted permanently, and (critically) objects are only deleted permanently after their retention/versions retention has passed. In the Privilege Cloud Safe management documentation, it notes that accounts are deleted permanently only after their retention period has passed, which is why deletion can be blocked by "non-expired" objects.

The underlying Vault/PACLI behavior is also explicit: "It is only possible to delete a Safe after the version retention period has expired for all files contained in the Safe." So, beyond deleting the content, the version retention period must have expired for all files # B.

NEW QUESTION # 17

.....

If you buy online classes, you will need to sit in front of your computer on time at the required time; if you participate in offline counseling, you may need to take an hour or two of a bus to attend class. So even if you are a newcomer, you don't need to worry that you can't understand the contents. Industry experts hired by CPC-CDE-RECERT Exam Questions also explain all of the difficult professional vocabulary through examples, forms, etc. You can completely study alone without the help of others.
