## AWS Certified Advanced Networking – Specialty (ANS-C00) Exam Guide

### Introduction

The AWS Certified Advanced Networking – Specialty (ANS-C00) is intended for individuals who perform complex networking tasks. This examination validates advanced technical skills and experience in designing and implementing AWS and hybrid IT network architectures at scale.

It validates an examinee's ability to:

- Design, develop, and deploy cloud-based solutions using AWS
- Implement core AWS services according to basic architectural best practices
- Design and maintain network architecture for all AWS services
- Leverage tools to automate AWS networking tasks

### Recommended AWS Knowledge

- Professional experience using AWS technology
- AWS Security best practices
- AWS storage options and their underlying consistency models
- AWS networking nuances and how they relate to the integration of AWS services

### Recommended General IT Knowledge

- Advanced networking architectures and interconnectivity options (e.g., IP VPN, MPLS/VPLS)
- Networking technologies within the OSI model, and how they affect implementation decisions
- Development of automation scripts and tools
  - Routing architectures (including static and dynamic)
  - Multi-region solutions for a global enterprise
  - Highly available connectivity solutions (e.g., DX, VPN)
- CIDR and sub-netting (IPv4 and IPv6)
- IPv6 transition challenges
- Generic solutions for network security features, including WAF, IDS, IPS, DDoS protection, and Economic Denial of Service/Sustainability (EDoS)

### Exam Preparation

These training courses and materials may be helpful for examination preparation:

- AWS Cloud Computing Whitepapers ([aws.amazon.com/whitepapers/](https://aws.amazon.com/whitepapers/))
- AWS Documentation ([aws.amazon.com/documentation/](https://aws.amazon.com/documentation/))

### Exam Content

#### Response Types

There are two types of questions on the examination:

- **Multiple-choice:** Has one correct response and three or four incorrect responses (distractors).
- **Multiple-response:** Has two or more correct responses out of five or more options.

## AWS-Advanced-Networking-Specialty Study Center - AWS-Advanced-Networking-Specialty Exam Pass Guide

You can use your smart phones, laptops, the tablet computers or other equipment to download and learn our AWS-Advanced-Networking-Specialty learning dump. Moreover, our customer service team will reply the clients' questions patiently and in detail at any time and the clients can contact the online customer service even in the midnight. The clients at home and abroad can purchase

our AWS-Advanced-Networking-Specialty Certification Questions online. Our service covers all around the world and the clients can receive our AWS-Advanced-Networking-Specialty study practice guide as quickly as possible.

To earn the AWS-Advanced-Networking-Specialty Certification, candidates must pass a rigorous 170-minute exam that consists of multiple-choice and multiple-response questions. AWS-Advanced-Networking-Specialty exam is designed to test the candidate's ability to design and implement complex networking solutions on AWS, as well as their ability to troubleshoot and optimize network performance. Candidates who pass the exam will receive the AWS Certified Advanced Networking Specialty certification, which is valid for three years and demonstrates their expertise in advanced networking on the AWS platform.

## Amazon AWS Certified Advanced Networking Specialty (ANS-C00) Exam Sample Questions (Q18-Q23):

### NEW QUESTION # 18

You have to set up an AWS Direct Connect connection to connect your on-premises to an AWS VPC. Due to budget requirements, you can only provision a single Direct Connect port. You have two border gateway routers at your on-premises data center that can peer with the Direct Connect routers for redundancy.

Which two design methodologies, in combination, will achieve this connectivity? (Select two.)

- A. Provision two VGWs for the VPC and create one Direct Connect private VIF per VGW.
- **B. Create one Direct Connect private VIF for the VPC with two customer peer IPs.**
- C. Terminate the Direct Connect circuit on any of the one routers, which in turn will have an IBGP session with the other router.
- D. Create two Direct Connect private VIFs for the same VPC, each with a different peer IP.
- **E. Terminate the Direct Connect circuit on a L2 border switch, which in turn has trunk connections to the two routers.**

**Answer: B,E**

### NEW QUESTION # 19

You have a three-tier web application with separate subnets for Web, Applications, and Database tiers. Your CISO suspects your application will be the target of malicious activity. You are tasked with notifying the security team in the event your application is port scanned by external systems.

Which two AWS Services cloud you leverage to build an automated notification system? (Select two.)

- A. Internet gateway
- B. VPC Flow Logs
- **C. AWS CloudTrail**
- **D. Lambda**
- E. AWS Inspector

**Answer: C,D**

### NEW QUESTION # 20

Your organization has a newly installed 1-Gbps AWS Direct Connect connection. You order the cross-connect from the Direct Connect location provider to the port on your router in the same facility. To enable the use of your first virtual interface, your router must be configured appropriately.

What are the minimum requirements for your router?

- A. IPsec Parameters, Pre-Shared key, Peer IP Address, BGP Session with MD5
- **B. 1-Gbps Single Mode Fiber Interface, 802.1Q VLAN, Peer IP Address, BGP Session with MD5.**
- C. 1-Gbps Multi Mode Fiber Interface, 802.1Q VLAN, Peer IP Address, BGP Session with MD5.
- D. BGP Session with MD5, 802.1Q VLAN, Route-Map, Prefix List, IPsec encrypted GRE Tunnel

**Answer: B**

### NEW QUESTION # 21

A company's web application is deployed on Amazon EC2 instances behind a public Application Load Balancer. The application flags malicious requests and uses an AWS Lambda function to add the offending IP addresses to the network ACL to block any further request for 24 hours. Recently, the application has been receiving more malicious requests, which causes the network ACL to reach its limit of allowed entries.

Which action should be taken to block more IP addresses, without compromising the existing security requirements?

- A. Update the AWS Lambda function to remove blocked entries from the network ACL after 2 hours.
- B. Update the AWS Lambda function to block malicious IPs in security groups rather than the network ACL.
- C. Update the AWS Lambda function to add an additional network ACL to the subnets once the limit for the previous ones has been reached.
- D. Update the AWS Lambda function to block malicious IPs in AWS WAF attached to the Application Load Balancer.

**Answer: D**

### NEW QUESTION # 22

You need to create a baseline of normal traffic flow in order to implement some security changes to your organization. What two items would be best to use? Choose the 2 correct answers:

- A. An IDS
- B. CloudWatch
- C. Wireshark
- D. CloudTrail

**Answer: B,C**
