Free PDF 2026 PL-400: Microsoft Power Platform Developer –High-quality New Exam Experience

As we all know, a lot of efforts need to be made to develop a PL-400 learning prep. Firstly, a huge amount of first hand materials are essential, which influences the quality of the compilation about the PL-400 actual test guide. We have tried our best to find all reference books. Then our experts have carefully summarized all relevant materials of the PL-400 exam. Also, annual official test is also included. They have built a clear knowledge frame in their minds before they begin to compile the PL-400 Actual Test guide. It is a long process to compilation. But they stick to work hard and never abandon. Finally, they finish all the compilation because of their passionate and persistent spirits. So you are lucky to come across our PL-400 exam questions. Once you choose our products, you choose high-efficiency exam preparation materials which will help you pass exam for sure. We are absolutely responsible for you. Stop hesitation!

Microsoft Power Platform Developer Sample Questions (Q346-Q351):

NEW QUESTION # 346
You are developing a model-driven app for the purchasing department of an organization. You provision a new test environment and

a security role. You select users to test the apps and assign the users to a security group named TestSG.

If the tests succeed, a manager will perform additional testing in the production environment and then publish the app for the organization's purchasing department.

You need to ensure that the test and production environments are configured correctly.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Scenario	Security artifact
Ensure that only test users can access the test environment.	▼ Set the test environment security group to TestSG. Assign the test users the app security role. Set the test environment security group to TestSG and assign test users the app security role.
Ensure that only the manager can access the app in production.	▼ Set the production environment security group to TestSG. Assign the manager the app security role. Add the manager to the TestSG security group and grant the manager the app security role.
Ensure that test users can access the app in production.	▼ Set the production environment security group to TestSG. Assign the test users the app security role. Set the production environment security group to TestSG and assign test users the app security role.
Ensure that purchasing department users can access the test environment.	▼ Remove the security group TestSG associated with the test environment. Assign all users the app security role. Add all users in the department to the TestSG security group.

Answer:

Explanation:

Scenario	Security artifact
Ensure that only test users can access the test environment.	▼
	Set the test environment security group to TestSG.
	Assign the test users the app security role.
	Set the test environment security group to TestSG and assign test users the app security role.
Ensure that only the manager can access the app in production.	▼
	Set the production environment security group to TestSG.
	Assign the manager the app security role.
	Add the manager to the TestSG security group and grant the manager the app security role.
Ensure that test users can access the app in production.	▼
	Set the production environment security group to TestSG
	Assign the test users the app security role.
	Set the production environment security group to TestSG and assign test users the app security role.
Ensure that purchasing department users can access the test environment.	▼
	Remove the security group TestSG associated with the test environment.
	Assign all users the app security role.
	Add all users in the department to the TestSG security group.

Explanation:

Scenario	Security artifact
Ensure that only test users can access the test environment.	▼
	Set the test environment security group to TestSG.
	Assign the test users the app security role.
	Set the test environment security group to TestSG and assign test users the app security role.
Ensure that only the manager can access the app in production.	▼
	Set the production environment security group to TestSG.
	Assign the manager the app security role.
	Add the manager to the TestSG security group and grant the manager the app security role.
Ensure that test users can access the app in production.	▼
	Set the production environment security group to TestSG.
	Assign the test users the app security role.
	Set the production environment security group to TestSG and assign test users the app security role.
Ensure that purchasing department users can access the test environment.	▼
	Remove the security group TestSG associated with the test environment.
	Assign all users the app security role.
	Add all users in the department to the TestSG security group.

Box 1: Set the test environment security group to TestSG and assign test users the app security role.
PowerApps apps use role-based security for sharing. The fundamental concept in role-based security is that a security role contains privileges that define a set of actions that can be performed within the app. All app users must be assigned to one or more predefined or custom roles.
Box 2: Assign the manager the app security role.

Box 3: Set the production environment security group to TestSG
Box 4: Add all users in the department to the TestSG security group.

NEW QUESTION # 347

You need to implement a reusable solution to encapsulate the parameterized Dataverse queries.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Create a custom process action that uses a custom workflow activity to perform the Dataverse queries.	
Define the input parameters for the Dataverse queries.	
Create a real-time workflow that uses a custom workflow activity to perform the Dataverse queries.	
Run the real-time workflow by using the Dataverse connector.	
Run the custom process action by using the Dataverse connector.	

Answer:

Explanation:

Actions	Answer Area
Create a custom process action that uses a custom workflow activity to perform the Dataverse queries.	Create a real-time workflow that uses a custom workflow activity to perform the Dataverse queries.
Define the input parameters for the Dataverse queries.	Run the real-time workflow by using the Dataverse connector.
Create a real-time workflow that uses a custom workflow activity to perform the Dataverse queries.	Run the custom process action by using the Dataverse connector.
Run the real-time workflow by using the Dataverse connector.	
Run the custom process action by using the Dataverse connector.	

NEW QUESTION # 348

You need to identify why employees are not receiving notification that nine customers are checked in and waiting in the repair area.
Which components should you test for each step? To answer, drag the appropriate components to the correct steps. Each component may be used once, more than once, or not at all.
You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Components	Step	Component
action	outbound text	
condition	nine customers in the store	
expression	number of customers in the store	
data operation		

Answer:

Explanation:

Explanation:

Scenario: A text alert must be sent to employees scheduled to assist in the repair area of the retail store if the number of repair check-ins exceeds eight.

Box 1: action
Box 2: condition
Box 3: data operation

NEW QUESTION # 349

You are creating a new page for a Power Apps portal.
You need to display data from Microsoft Dataverse on the page.
What should you use?

- A. iFrame
- B. Bootstrap
- C. CSS
- D. Liquid

**Answer: D**

Explanation:
Explanation
Liquid is an open-source template language that is integrated natively into Microsoft Power Apps portals. It acts as a bridge between Dataverse and the HTML or text output that is sent to the browser. Liquid can be used to add dynamic content to pages and to create a variety of custom templates. Additionally, Liquid provides access only to the data and operations that are explicitly allowed by the portals.
Reference:
https://docs.microsoft.com/en-us/learn/modules/liquid-template-language/

NEW QUESTION # 350

A JavaScript function on a Contact form alerts users to what they need to type, as shown in the JavaScript Code exhibit. (Click the JavaScript Code tab.)

```javascript
if (typeof (JSnameSpace) - - "undefined")
{JSnameSpace = {}; }

JSnameSpace.tools = {
    snowMsgOnField: function (exContext where
sMessage) {
        try {
            var whereField =
exContext.getEventSource();
            var formContext
exContext.getFormContext[];
            var msgld = where = "id";

    formContext.getControl(where).setNotification
(sMessage. msgld);

    fromContext.ul.setFormNotification(sMessage,
'INFO', msgld);
            window.setTimeout(function ()
{formContext.ui.clearFormNotification(msgld); },
3000):
        }
        catch (e){
            alert('showMsgOnField > > ' +
e.description):
        }
    }
}
```

The Business Phone field has the OnChange event handler defined as shown in the Event Handler exhibit. (Click the Event Handler tab.)

Users report that there is incorrect wording on the Contact page, as shown in the Contact exhibit. (Click the Contact tab.)
