If you just want to test yourself, you can conceal it, after you finish it, you can see the answers by canceling the conceal. It's quite convenient and effective.

SAP Certified Associate - Security Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which of the following allow you to control the assignment of table authorization groups? Note: There are 2 correct answers to this question.

- A. SSM_CUST
- B. V_BRG_54
- C. PRGN_CUST
- D. V_DDAT_54

Answer: B,D

Explanation:

In SAP systems, table authorization groups are controlled using views V_DDAT_54 and V_BRG_54.

V_DDAT_54 is a maintenance view that allows administrators to assign tables to authorization groups, defining which groups protect specific tables and ensuring that access is restricted to authorized users.

V_BRG_54 is another view used to manage table authorization groups, particularly for assigning and maintaining group definitions that link to authorization objects like S_TABU_DIS. These views enable granular control over table access, supporting data security and compliance. PRGN_CUST is a customizing table for role and authorization settings, not specifically for table authorization groups, and SSM_CUST is related to system settings, not table access control. By using V_DDAT_54 and V_BRG_54, SAP provides a structured approach to managing table authorizations, ensuring that sensitive data in tables is protected against unauthorized access while allowing efficient administration of access controls.

NEW QUESTION # 46

Which tool can you use to modify the entities schema content across multiple repositories?

- A. SAP Business Application Studio
- **B. SAP Cloud Identity Services Schemas app**
- C. SAP Cloud Identity Services Transformation Editor
- D. SAP BTP Account Explorer

Answer: B

Explanation:

The SAP Cloud Identity Services Schemas app is the tool used to modify entities schema content across multiple repositories in SAP's identity management framework. This app provides a centralized interface for defining and managing schema attributes, such as user or group properties, ensuring consistency across different identity repositories. Administrators can use it to customize schemas to meet specific organizational needs, supporting integration with various SAP and non-SAP systems. The SAP BTP Account Explorer is used for managing accounts and subaccounts, not schema modifications. The SAP Cloud Identity Services Transformation Editor focuses on data transformations during provisioning, not schema management. SAP Business Application Studio is a development environment for building applications, not for managing identity schemas. The Schemas app's ability to handle schema content across repositories ensures unified identity data structures, enhancing interoperability and security in SAP Cloud Identity Services, making it the ideal tool for this purpose.

NEW QUESTION # 47

In SAP HANA Cloud, who has access to a database object?

- **A. The creator and the schema owner**
- B. The user DBADMIN and the group owner
- C. The user SYSTEM and the creator
- D. The owner and the SAP-owned users

Answer: A

Explanation:

In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework, ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.

NEW QUESTION # 48

Which cryptographic libraries are provided by SAP? Note: There are 2 correct answers to this question.

- A. Cryptlib
- **B. SecLib**
- C. CommonCryptoLib

- **D. SAPCRYPTOLIB**

Answer: B,D

NEW QUESTION # 49

What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- **B. The field delivered with content was changed but the old value was retained.**
- C. Field values have not been changed.
- D. Field values were unchanged and no new authorization was added.

Answer: B

NEW QUESTION # 50

.....
