- A. It must be Outbound because it is traffic that is generated from the WLC.
- B. To have the complete list of options, the CPU ACL must be created only by the CLI.
- **C. It must be Inbound because traffic goes to the WLC.**
- D. Packet direction has no significance; it is always Any.

**Answer: C**

- C. WPA2 passkey
- D. preauthentication ACL

**Answer: A**

#### NEW QUESTION # 274

After looking in the logs, an engineer notices that RRM keeps changing the channels for non-IEEE 802.11 interferers. After surveying the area, it has been decided that RRM should not change the channel. Which feature must be enabled to ignore non-802.11 interference?

- **A. Avoid Persistent Non-WIFI Interference**
- B. Avoid Foreign AP Interference
- C. Avoid Cisco AP Load
- D. Avoid Non-802.11 Noise

**Answer: A**

Check the Avoid Non-802.11a (802.11b) Noise check box to cause the controller's RRM algorithms to consider noise (non-802.11 traffic) in the channel when assigning channels to lightweight access points, or uncheck it to disable this feature. For example, RRM may have access points avoid channels with significant interference from nonaccess point sources, such as microwave ovens. The default value is selected.

Check the Avoid Persistent Non-WiFi Interference check box to configure the controller to stop ignoring persistent non-Wi-Fi interference in new channel calculation. The persistent non-Wi-Fi interference is considered during the metric calculation for channels.
