In a make-to-order scenario with event-based, how are variances calculated? Note: There are 2 Correct Answers to this question.

- A. Production variances are calculated if an order has the status DELIVERED
- B. Production variances are automatically calculated
- C. Production variances can also be calculated in case of partial delivery
- D. Production variance calculation can always be triggered manually on demand

正解: B、C

解説:

Solution:

Based on learning.sap.com documentation for event-based in a make-to-order scenario, the two accurate statements are:

Correct Answers

A. Production variances are automatically calculated

Once the production order is finally delivered (status set to DLV), an event-based settlement is triggered, and variances are calculated and posted automatically SAP Learning+14SAP Learning+14SAP Learning+14.

B. Production variances can also be calculated in case of partial delivery Partial goods receipts still trigger WIP and variance postings based on the delivered quantity. Variances are computed even when delivery is partial (e.g., status PDLV) SAP Learning+3SAP Learning+3SAP Learning+3.

Incorrect Options

* C. Production variance calculation can always be triggered manually on demand - This is only possible in a manual or period-end context, not in the real-time, event-based approach.

* D. Production variances are calculated if an order has the status DELIVERED - While true, this doesn't capture the full behavior (e.g., variances also calculated with partial delivery). So B is the more comprehensive choice.

Final Answers:

* A. Production variances are automatically calculated

* B. Production variances can also be calculated in case of partial delivery

- **B. SAP Integration Suite**
- C. SAP Cloud Connector
- D. SAP Process Orchestration

正解: A、B

解説:

Solution:

Based strictly on learning.sap.com, the correct technologies for integrating SAP S/4HANA Cloud Public Edition with another SAP public cloud solution are:

Correct Answers

B. Pre-delivered APIs

SAP provides a library of standard REST and OData APIs for seamless data exchange between S/4HANA Cloud and other SAP cloud services. These are the first choice for integration due to their out-of-the-box support (learning.sap.com).

C. SAP Integration Suite

SAP Integration Suite (part of SAP BTP) is the preferred middleware platform for managing, enriching, and orchestrating integrations-especially when combining both SAP and non-SAP applications, or handling complex scenarios (learning.sap.com).

Not Correct

* A. SAP Cloud Connector - This is for hybrid (on-premise) connectivity, not needed for pure cloud-to-cloud integrations.

* D. SAP Process Orchestration - That's for on-premise environments and not supported in the public cloud context.

Final Answers:

* B. Pre-delivered APIs

* C. SAP Integration Suite
