ACD201 Exam Dumps Can 100% Guarantee Pass ACD201 Exam

DOWNLOAD the newest PassCollection ACD201 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1a48Fnk8bBfeVJMtoahJU1zZlID8sPGQ9

The Appian modern job market is becoming more and more competitive and challenging and if you are not ready for it then you cannot pursue a rewarding career. Take a smart move right now and enroll in the Appian Senior Developer (ACD201) certification exam and strive hard to pass the Appian Senior Developer (ACD201) certification exam. The Appian Senior Developer (ACD201) certification exam offers you a unique opportunity to learn new in-demand skills and knowledge.

PassCollection is a professional IT certification sites, the certification success rate is 100%. This number is proved by candidates through practice. Because PassCollection has a strong IT team of experts, they are committed to study exam questions and answers, and serve the vital interests of the majority of candidates. They use their own professional mind and experience to meet the needs of the candidates. According to the needs of the candidate, they consider the issue from all angles, and manufacturing applicability exam training materials. This material is Appian ACD201 Exam Training materials, which including questions and answers.

ACD201 New Dumps Free & ACD201 Exam Brain Dumps

PassCollection has launched the ACD201 exam dumps with the collaboration of world-renowned professionals. Appian ACD201 exam study material has three formats: ACD201 PDF Questions, desktop Appian ACD201 practice test software, and a ACD201 web-based practice exam.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 2	• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 3	• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

Topic 4	• Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.

Appian Senior Developer Sample Questions (Q17-Q22):

NEW QUESTION # 17
A recent Health Check report of your application indicates an increased risk of large context size in the interfaces.
What are two possible contributors to this risk? (Choose two.)

- A. The load variable has a web service response as JSON.
- B. Multiple local variables hold duplicate data.
- C. Data transformation is performed inside the interface rather than delegated to the source system.
- D. Local variables are set to refresh every five minutes.

Answer: B,C

Explanation:
Performing data transformation inside the interface can increase the amount and size of context data stored, raising context size risk.
Multiple local variables holding duplicate data unnecessarily inflate the interface's memory footprint, contributing to large context size.

NEW QUESTION # 18
You're maintaining a client's case management system.
The client needs you to review the performance of one of their interfaces as it is perceived to be quite slow The interface is a start form that users use to edit party records in the system. They can edit these party records either through the participant view of the case record or directly through the party record.
Given a party record may consist of many attributes, Custom Data Types (CDT) have been used for the purpose of writing to the database, while record types have been used to retrieve data.
What might be a potential cause for this issue, and what should you do?

- A. CDTs are an inefficient method for writing to the database Hence, you should refactor the entire process to utilize records only
- B. The queries may no! be performant due to unexpected indexing conditions or be casting to the incorrect CDT. Hence, you should review the queries and adjust accordingly.
- C. The user should only query and edit the attributes they are intending to edit. Hence, you should restrict editing through the case record and users should only edit the party through the party record

Answer: B

NEW QUESTION # 19
You're redesigning user interfaces to achieve more efficient space usage.
Which layout component is the best choice for displaying an interface with a vertical meaningful order of components?

- A. a!sideBySideLayout()
- B. a!columnsLayout()
- C. a!cardLayout()

Answer: B

Explanation:
a!columnsLayout() is best for organizing and displaying components in a vertical order with efficient space usage, as it supports arranging items in structured, responsive columns.

NEW QUESTION # 20

You need to configure a process model that runs every day at 10:00 AM. The process should start only at the specified time even when a newer version of the process model is published.

A Boolean type constant needs to be configured in the process model. The intended flow of the process should be executed only when the constant is True.

Which three steps should you perform? (Choose three.)

- A. Add a timer event in the start node.
- B. Add an expression-based condition in the start node timer event to check for the constant to be True.
- C. Add a XOR Gateway just after the start node to check for the constant to be True.
- D. Add a timer event just after the start node to check for the specific time.
- E. Add an expression-based condition in the start node timer event to check for the specific time.

Answer: A,C,E

Explanation:

Add a timer event in the start node to schedule the process to start at 10:00 AM every day.

Add a XOR Gateway after the start node to check the Boolean constant and control the flow based on its value.

Add an expression-based condition in the start node timer event to ensure the process starts only at the specified time.

NEW QUESTION # 21

An insurance company's product details are currently distributed across numerous database tables, encompassing over 60 to 70 fields.

You need to implement a product comparison tool for business users to compare up to three insurance products simultaneously, with all the product details in a tabular format.

Refer to the following sample format:

Which object should be used to transform the data into the required format?

- A. Stored procedure
- B. Record type with relationships
- C. VCCCiews

Answer: C

Explanation:

Database views are ideal for transforming complex, distributed product data into a single, flattened structure tailored for reporting or comparison. In this case, a view can pivot the 60-70 fields and organize them by attribute (e.g., Name, Type, Premium) across multiple product columns, enabling a tabular comparison layout like the one shown. Views also optimize performance and reduce transformation overhead in the interface layer.

NEW QUESTION # 22

......

Now you do not need to worry about the relevancy and top standard of PassCollection Appian Senior Developer (ACD201) exam questions. These Appian ACD201 dumps are designed and verified by qualified Appian Senior Developer (ACD201) exam trainers. Now you can trust PassCollection Appian Senior Developer (ACD201) practice questions and start preparation without wasting further time.
