

AB-900시험대비덤프데모문제 - AB-900시험준비공부

PassTIP은 여러분이 빠른 시일 내에 Microsoft AB-900 인증 시험을 효과적으로 터득할 수 있는 사이트입니다. Microsoft AB-900 인증 자격증은 일상생활에 많은 개편을 가져올 수 있는 시험입니다. Microsoft AB-900 인증 자격증을 소지한 자들은 당연히 없는 자들보다 연봉이 더 높을 거고 승진 기회도 많아지며 IT 업계에서의 발전도 무궁무진합니다.

Microsoft AB-900 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Understand data protection and governance tasks for Microsoft 365 and Copilot: This domain explains how Microsoft Purview protects and governs organizational data through classification, sensitivity labels, retention, and compliance tools. It also covers how Copilot accesses data, follows permissions, and how administrators monitor risks, alerts, and oversharing.
주제 2	<ul style="list-style-type: none"> Perform basic administrative tasks for Copilot and agents: This domain focuses on managing Copilot and agents, including licensing, feature controls, and usage monitoring. It also covers creating agents, managing prompts, configuring user access, and monitoring agent activity through admin centers.
주제 3	<ul style="list-style-type: none"> Identify the core features and objects of Microsoft 365 services: This domain covers the main Microsoft 365 objects such as users, groups, licenses, mailboxes, SharePoint sites, and Teams. It also focuses on managing organization settings, roles, authentication, authorization, and core security features using Microsoft Entra and Microsoft Defender.

시험패스에 유효한 최신버전 AB-900시험대비 덤프데모문제 최신 덤프모음집

경쟁율이 치열한 IT업계에서 아무런 목표없이 아무런 희망없이 무미건조한 생활을 하고 계시나요? 다른 사람들이 모두 취득하고 있는 자격증에 관심도 없는 분은 치열한 경쟁속에서 살아남기 어렵습니다. Microsoft인증 AB-900시험패스가 힘들다한들PassTIP덤프만 있으면 어려운 시험도 쉬워질수 밖에 없습니다. Microsoft인증 AB-900덤프에 있는 문제만 잘 이해하고 습득하신다면Microsoft인증 AB-900시험을 패스하여 자격증을 취득해 자신의 경쟁율을 업그레이드하여 경쟁시대에서 안전감을 보유할수 있습니다.

최신 Microsoft 365 Certified AB-900 무료샘플문제 (Q35-Q40):

질문 # 35

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

정답:

설명:

Explanation:

The correct selections are No, Yes, Yes . Statement 1 is No because Microsoft states that if an organization has a Microsoft 365 Copilot license and at least one user is assigned to a Copilot license, SharePoint administrators automatically get access to the SharePoint Advanced Management features required for Copilot deployment. Microsoft does not say that all users in the organization must have Microsoft 365 Copilot licenses for administrators to use SharePoint Advanced Management. Statement 2 is Yes because Microsoft documents SharePoint Advanced Management features such as Restricted Content Discovery and Restricted SharePoint Search , which can limit whether content from specific SharePoint sites appears in Microsoft 365 Copilot and organization-wide search experiences. Statement 3 is Yes because Microsoft explicitly states that organizations can purchase a standalone SharePoint Advanced Management license for each user in the organization. That means it is available even for organizations that do not have Microsoft 365 Copilot.

질문 # 36

A user is blocked from signing in and the admin suspects Conditional Access or a risky sign-in detection. Which two tools in the Microsoft Entra admin center should the administrator use first to identify the exact sign-in failure and which policy caused it? (Select TWO)

- A. Sign-in logs and Troubleshoot and support in Microsoft Entra ID
- B. Microsoft Entra ID Application proxy
- C. Exchange Online Message Trace
- D. Conditional Access What If tool
- E. Microsoft 365 Service Health dashboard

정답: A,D

설명:

Option A: This tool allows the administrator to simulate a sign-in for a specific user under specific conditions (e.g., location, device state) to determine which Conditional Access policies would apply and whether they would result in a grant or a block. This is ideal for pre-emptively troubleshooting a suspected Conditional Access block.

Option C: The Sign-in logs are the definitive source of truth for all sign-in attempts, providing the outcome, the reason for failure (including block by Conditional Access or ID Protection), and the policy name that was applied. The Troubleshoot and support blade often provides targeted troubleshooting flows for sign-in and access issues.

질문 # 37

A user named User5 navigates to <https://myapps.microsoft.com> . After entering their username and password, User5 receives the displayed message on their mobile device.

Use the drop-down menus to select the answer choice that completes the statement based on the information presented in the graphic.

정답 :

설명:

□ Explanation:

the Microsoft Authenticator app

The correct answer is the Microsoft Authenticator app . The image shows the familiar Microsoft MFA prompt that says "Are you trying to sign in?" and "Enter the number shown to sign in." Microsoft documents this as number matching in Authenticator push notifications , which is part of Microsoft Entra multifactor authentication using the Microsoft Authenticator app . Microsoft explains that number matching is a security improvement for Authenticator push approvals and is used when the default sign-in method is Authenticator push notifications.

The other choices do not match the experience shown. Email OTP would involve a one-time code sent by email. SMS would send a text message code to a phone number. Temporary Access Pass is a time-limited passcode used for onboarding or recovery scenarios, not the mobile push screen shown in the image. Because the graphic specifically shows a mobile approval prompt with number matching, the MFA method is clearly the Microsoft Authenticator app .

질문 # 38

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE Each correct selection is worth one point

□

정답 :

설명:

□ Explanation:

The correct selections are Yes, Yes, Yes . For statement 1, Microsoft Support explains that if you are not a site owner, you might still be able to invite other people to the site , although the invitation can generate an access request that a site owner approves or declines. Microsoft also states that site users have the opportunity to invite other people to collaborate on sites , unless that feature is disabled. That makes the statement true.

For statement 2, Microsoft Learn states that in SharePoint you can give people permissions to a site by adding individual users, security groups, or Microsoft 365 groups to one of the three SharePoint groups, including the Members group. That directly supports the statement.

For statement 3, Microsoft documents that site ownership and membership can be managed by adding or removing owners, members, site owners, site members, and site visitors . For group-connected sites, Microsoft also documents that owners can manage group ownership and remove owner status. Therefore, a site owner can remove another site owner, provided at least one owner remains.

질문 # 39

Your organization has a Microsoft 365 E5 subscription. You create a Microsoft Purview sensitivity label named Label1 . You need to ensure that users can apply Label1 to files in Microsoft 365. What should you use?

- A. a retention label policy
- **B. a sensitivity label policy**
- C. a trainable classifier
- D. an auto-labeling policy

정답 : B

설명:

The correct answer is D. a sensitivity label policy . In Microsoft Purview, creating a sensitivity label by itself does not make it available to users. Microsoft Learn states that after you create sensitivity labels, you must publish them by creating a label policy so that users and groups can see and apply those labels in Microsoft
