The company is preparing for the test candidates to prepare the FCP_FGT_AD-7.6 exam guide professional brand, designed to be the most effective and easiest way to help users through their want to get the test FCP_FGT_AD-7.6 certification and obtain the relevant certification. In comparison with similar educational products, our FCP_FGT_AD-7.6 Training Materials are of superior quality and reasonable price, so our company has become the top enterprise in the international market. Our FCP_FGT_AD-7.6 practice materials have been well received mainly for the advantage of high pass rate as 99% to 100%.

Fortinet FCP_FGT_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	VPN: This section of the exam measures the skills of network security engineers and covers the configuration and deployment of Virtual Private Network (VPN) solutions. Candidates are required to implement SSL VPNs to grant secure remote access to internal resources and configure IPsec VPNs in either meshed or partially redundant topologies to ensure encrypted communication between distributed network locations.
Topic 2	Routing: This section of the exam measures the skills of firewall administrators and covers the configuration of routing features on FortiGate devices. It includes defining and applying static routes for directing traffic within and outside the network, as well as setting up Software-Defined WAN (SD-WAN) to distribute and balance traffic loads across multiple WAN connections efficiently.

Topic 3	Deployment and system configuration: This section of the exam measures the skills of network security engineers and covers essential tasks for setting up a FortiGate device in a production environment. Candidates are expected to perform the initial configuration, establish basic connectivity, and integrate the device within the Fortinet Security Fabric. They must also be able to configure a FortiGate Cluster Protocol (FGCP) high availability setup and troubleshoot resource and connectivity issues to ensure system readiness and network uptime.
Topic 4	Content inspection: This section of the exam measures the skills of network security engineers and covers the setup and management of content inspection features on FortiGate. Candidates must demonstrate an understanding of encrypted traffic inspection using digital certificates, identify and apply FortiGate inspection modes, and configure web filtering policies. The ability to implement application control for monitoring and regulating network application usage, configure antivirus profiles to detect and block malware, and set up Intrusion Prevention Systems (IPS) to shield the network from threats and vulnerabilities is also assessed.
Topic 5	Firewall policies and authentication: This section of the exam measures the skills of firewall administrators and covers the implementation and management of security policies. It involves configuring basic and advanced firewall rules, applying Source NAT (SNAT) and Destination NAT (DNAT) options, and enforcing various firewall authentication methods. The section also includes deploying and configuring Fortinet Single Sign-On (FSSO) to streamline user access across the network.

FCP_FGT_AD-7.6 Test Labs - Hot FCP_FGT_AD-7.6 Questions

There are a lot of experts and professors in or company in the field. In order to meet the demands of all people, these excellent experts and professors from our company have been working day and night. They tried their best to design the best FCP_FGT_AD-7.6 certification training materials from our company for all people. By our study materials, all people can prepare for their FCP_FGT_AD-7.6 Exam in the more efficient method. We can guarantee that our FCP_FGT_AD-7.6 study materials will be suitable for all people and meet the demands of all people, including students, workers and housewives and so on.

Fortinet FCP - FortiGate 7.6 Administrator Sample Questions (Q62-Q67):

NEW QUESTION # 62

An administrator wanted to configure an IPS sensor to block traffic that triggers a signature set number of times during a specific time period.

How can the administrator achieve the objective?

- A. Use IPS filter, rate-mode periodical option.
- B. Use IPS packet logging option with periodical filter option.
- C. Use IPS group signatures, set rate-mode 60.
- D. Use IPS filter, rate-mode periodical option.

Answer: A

Explanation:

The IPS filter with the rate-mode set to "periodical" allows the administrator to block traffic that triggers a signature a specified number of times within a defined time period, meeting the requirement.

NEW QUESTION # 63

FortiGate is integrated with FortiAnalyzer and FortiManager.

When creating a firewall policy, which attribute must an administrator include to enhance functionality and enable log recording on FortiAnalyzer and FortiManager?

- A. Policy ID
- B. Log ID

- C. Universally Unique Identifier
- D. Sequence ID

Answer: C

NEW QUESTION # 64

Refer to the exhibits.

Network diagram

Source IP address Remote-User2: 201.0.114.23
Destination IP address: 203.0.113.22
Destination port: 80

Source IP address Remote-User1: 203.0.115.23
Destination IP address: 203.0.113.22
Destination port: 80

Firewall policy configured with virtual IP of webserver

External IP/Address Range	203.0.113.22
Mapped IP Address/Range	10.0.1.10

10.0.1.10 Webserver

LAN(port3) 10.0.1.254 FortiGate

WAN(port1) 203.0.113.10

Firewall address object

Edit Address

Name: Deny_IP

Color: Change

Type: Subnet

IP/Netmask: 201.0.114.23/32

Interface: WAN (port1)

Static route configuration: ☐

Comments: Deny web server access. 23/255

Firewall policies

ID	Name	Source	Destination	Schedule	Service	Action
WAN (port1) → LAN (port3) 2						
4	Deny	Deny_IP	all	always	ALL	DENY
3	Allow_access	all	Webserver	always	ALL	ACCEPT

The exhibits show a diagram of a FortiGate device connected to the network, and the firewall configuration.

An administrator created a Deny policy with default settings to deny Webserver access for Remote-User2.

The policy should work such that Remote-User1 must be able to access the Webserver while preventing Remote-User2 from accessing the Webserver.

Which two configuration changes can the administrator make to the policy to deny Webserver access for Remote-User2? (Choose two.)

- A. Enable match-vip in the Deny policy.
- B. Set the Destination address as Deny_IP in the Allow_access policy.
- C. Disable match-vip in the Deny policy.
- D. Set the Destination address as Webserver in the Deny policy.

Answer: A,D

Explanation:

In this scenario, the FortiGate uses a Virtual IP (VIP) to map the external IP 203.0.113.22 to the internal web server 10.0.1.10.

When using VIPs, firewall policies must be configured carefully to match the translated destination address.

The external users (Remote-User1 and Remote-User2) connect to 203.0.113.22, which is the VIP for the web server.

By default, firewall policies match pre-NAT addresses (the original destination before VIP translation).

To make the deny policy recognize traffic destined for the VIP-mapped address, the match-vip option must be enabled.

The destination in the Deny policy should explicitly be the Webserver (the VIP object), so FortiGate correctly identifies the target.

NEW QUESTION # 65

Refer to the exhibit.

```
config system global
    set av-failopen one-shot
end
config ips global
    set fail-open enable
end
```

Based on this partial configuration, what are the two possible outcomes when FortiGate enters conserve mode? (Choose two.)

- A. Administrators must restart FortiGate to allow new session.
- B. FortiGate drops new sessions requiring inspection.
- C. FortiGate skips quarantine actions.
- D. Administrators cannot change the configuration.

Answer: B,C

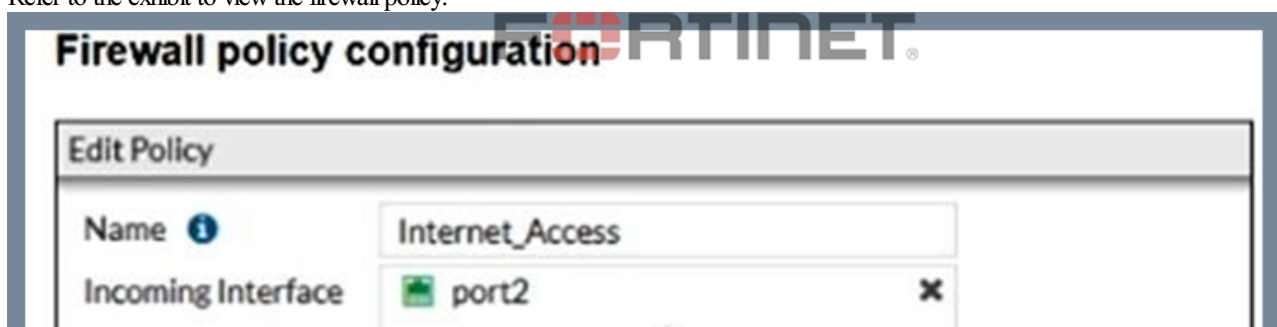

Explanation:

In fail-open mode, FortiGate skips quarantine actions to maintain traffic flow despite IPS or antivirus failures.

FortiGate drops new sessions that require inspection when in conserve mode and fail-open is enabled, to protect the network from potentially harmful traffic.

NEW QUESTION # 66

Refer to the exhibit to view the firewall policy.

Outgoing Interface	port1	X
	+	
Source	all	X
	+	
Destination	all	X
	+	
Schedule	always	
Service	DNS X FTP X HTTP X HTTPS X +	
Action	☒ ACCEPT ☐ DENY	
Inspection Mode	☒ Flow-based ☐ Proxy-based	
Firewall/Network Options		
NAT	☒	
IP Pool Configuration	☒ Use Outgoing Interface Address ☐ Use Dynamic IP Pool	
Preserve Source Port	☐	
Protocol Options	☒ default	
Security Profiles		
AntiVirus	☒ ☒ AV default	
Web Filter	☐	
DNS Filter	☐	
Application Control	☐	
IPS	☐	
File Filter	☐	
SSL Inspection	☒ certificate-inspection	

Why would the firewall policy not block a well-known virus, for example eicar?

- A. The firewall policy does not apply deep content inspection.
- B. The action on the firewall policy is not set to deny.
- C. Web filter is not enabled on the firewall policy to complement the antivirus profile.

- Answer: A**

Because of this, FortiGate cannot perform deep content inspection, which is required for antivirus to detect and block threats such as the EICAR test virus within encrypted HTTPS sessions.
