Salesforce Certified Omnistudio Consultant Vce Torrent & Plat-Con-201 Test Practice Engine & Salesforce Certified Omnistudio Consultant Latest Test Engine

Having a good command of professional knowledge for customers related to this Plat-Con-201 exam is of superior condition. However, that is not certain and sure enough to successfully pass this exam. You need efficiency and exam skills as well. Actually, a great majority of exam candidates feel abstracted at this point, wondering which one is the perfect practice material they are looking for. To make things clear, we will instruct you on the traits of our Plat-Con-201 real materials one by one. Here we recommend our Plat-Con-201 guide question for your reference.

Salesforce Certified Omnistudio Consultant Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which two functions can be performed by DataRaptors?

Choose 2 answers

- A. Transform data
- B. Read and write data to external systems
- C. Read and write data to Salesforce
- D. Combine requests into a single response

Answer: A,C

Explanation:

DataRaptors are OmniStudio data tools that can perform various functions on data, such as reading, writing, transforming, and validating. They can work with Salesforce data and external data sources. The two functions that can be performed by DataRaptors are:

- * Transform data: DataRaptors can use transformation rules to manipulate data, such as changing the format, applying calculations, mapping values, etc.
- * Read and write data to Salesforce: DataRaptors can use SOQL or SOSL queries to read data from Salesforce objects and fields, and use DML operations to insert, update, delete, or upsert data to Salesforce.

The functions that cannot be performed by DataRaptors are:

- * Combine requests into a single response: DataRaptors cannot aggregate multiple requests from different sources into one response. This can be done using Integration Procedures, which can orchestrate multiple DataRaptors or REST calls into a single process.

- * Read and write data to external systems: DataRaptors cannot directly access external systems or APIs.

They need to use Integration Procedures or REST elements to invoke external services and pass the data to or from DataRaptors.

NEW QUESTION # 49

A business wants to display customer 360° information in a console for their call center agents. The customer information will come from a variety of sources, and the information should be grouped together logically.

The agents will need to take different actions depending on the context of each group of information.

Which tool should a consultant recommend to meet this requirement?

- **A. FlexCards**
- B. Lightning web components
- C. Visualforce Page
- D. Omniscript

Answer: A

Explanation:

The tool that the consultant should recommend to meet this requirement is Lightning web components.

Lightning web components are custom HTML elements built using HTML and modern JavaScript. They can be used to create rich and interactive user interfaces that display data from various sources and allow users to take actions. In this case, a Lightning web component can be used to display customer 360° information in a console using FlexCards, OmniScripts, or other components.

Omniscript is not a tool, but a type of component that can be used to create guided interactions. Visualforce Page is not suitable for this requirement, as it is a legacy technology that uses server-side rendering and does not support modern web standards. FlexCards are not a tool, but a type of component that can be used to display contextual data on record pages.

NEW QUESTION # 50

A company is designing a new console for contact center agents. The cards in the console need to display the following:

* "Open" cases with case description, case open date, case type, assigned to and priority fields. Open should be highlighted with a red border.

* "Awaiting Closure" cases with case description, last action taken date, resolution, approval reason for closure, and assigned to fields. These cases should be highlighted with a grey border.

* "Closed" cases with case description, resolution, case closed date fields with a link to duplicate cases.

All cases will be fetched using a single DataRaptor.

How should the consultant design the FlexCard solution to meet these requirements?

- A. Using card filter and a single FlexCard with multiple flyouts
- **B. Using card filter and multiple FlexCards**
- C. Using card session variables and a single FlexCard with multiple flyouts
- D. Using card session variables and multiple FlexCards

Answer: B

Explanation:

The consultant should design the FlexCard solution using card filter and multiple FlexCards to meet these requirements. A card filter is a property that determines which records are displayed in a FlexCard based on certain criteria. The consultant can use card filter

to display only the cases with a specific status, such as Open, Awaiting Closure, or Closed. A FlexCard is a tool that can display data and actions in a card format.

The consultant can create multiple FlexCards for each case status, and customize the fields and actions accordingly. The consultant can also use custom style to apply different borders for each case status

NEW QUESTION # 51

A business wants to transform an existing process into a digital interaction using OmniScript. The process includes several steps. Some steps apply to all users, and other steps only apply to users depending on their responses to certain questions. The business does not want all users to have to go through all the steps.

Which OmniScript feature should the consultant recommend to meet this requirement?

- A. User Roles
- B. Script Configuration
- C. Conditional Views
- D. Script Profiles

Answer: C

Explanation:

The OmniScript feature that should be recommended to meet this requirement is Conditional Views.

Conditional Views allow the designer to create different paths within an OmniScript based on user responses or data values. User Roles are used to control access and visibility of OmniScripts based on user profiles or permissions. Script Configuration is used to define general settings and properties of an OmniScript. Script Profiles are used to assign different versions of an OmniScript to different user groups.

NEW QUESTION # 52

A company is beginning their first project using Calculation Procedures & Matrices. The developers on the team are concerned about learning the new tool and how they will test their calculation procedures. The consultant recommends that they use the built-in simulator.

In this scenario, what benefit should the consultant highlight to the developer team?

- A. It aggregates data elements that have been calculated separately.
- B. It generates sample input and output JSON that can be easily used to build DataRaptors.
- C. It allows developers to create what-if calculations.
- D. It verifies data types in the algebraic calculations of the calculation procedure.

Answer: B

NEW QUESTION # 53

.....

Without practice, you cannot crack the Plat-Con-201 exam. Lead2PassExam facilitates you in this purpose with its desktop Salesforce Plat-Con-201 practice exam software.
