Passing the AD0-E725 exam is your best career opportunity. The rich experience with relevant certificates is important for enterprises to open up a series of professional vacancies for your choices. Our website's AD0-E725 learning quiz bank and learning materials look up the Latest AD0-E725 Questions and answers based on the topics you choose. This choice will serve as a breakthrough of your entire career, so prepared to be amazed by high quality and accuracy rate of our AD0-E725 study guide.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
Topic 2	<ul style="list-style-type: none">• External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I• O events and webhooks to create automated and connected business processes.

Topic 3	<ul style="list-style-type: none"> Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Topic 4	<ul style="list-style-type: none"> Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

Test AD0-E725 Free & Latest AD0-E725 Version

To eliminate the chances of mistakes and prepare well for exams you must use AD0-E725 practice test software. There are two types of Adobe Commerce Developer Expert AD0-E725 practice test software: You can install Adobe AD0-E725 practice test software on all window-based PCs. On the other hand, a web-based Adobe Commerce Developer Expert Networking Solutions AD0-E725 practice test can be used without the installation of any software. Practicing with these AD0-E725 practice exams software seems like you are taking a Real AD0-E725 Exam. This software allows you to take multiple Adobe AD0-E725 exam attempts. At the end of each Adobe Commerce Developer Expert AD0-E725 exam attempt, you can check your progress. These Adobe AD0-E725 practice tests assist you to know how to manage your time and complete the Adobe Commerce Developer Expert AD0-E725 exam within the specified time limit. Thus, Using these AD0-E725 practice tests software will be beneficial if you want to achieve the highest score in the exam.

Adobe Commerce Developer Expert Sample Questions (Q43-Q48):

NEW QUESTION # 43

A client reports an issue with indexers that are failing and remain stuck. The client asks a Developer to solve this issue. What recommended solution should the Developer use?

- A. In `app/etc/env.php` `indexer_sync_mode` -> `false` under `indexer` node.
- B. Create a cronjob that runs `bin/magento indexer:reindex` periodically.
- C. Run `bin/magento indexer:set-mode realtime <indexer_list>`.

Answer: A

NEW QUESTION # 44

An Adobe Commerce Developer is implementing asynchronous communication with a third-party system using RabbitMQ. The XML files used must be able to configure a local queue and consume messages published by the third-party system. Which files should the Developer use?

- A. `queue_topology.xml` and `queue_publisher.xml`
- B. `communication.xml`, `queue_topology.xml`, and `queue_publisher.xml`
- C. `queue_topology.xml` and `queue_consumer.xml`
- D. `communication.xml`, `queue_topology.xml`, and `queue_consumer.xml`

Answer: C

Explanation:

To consume messages from a third-party system in RabbitMQ:

`queue_topology.xml` # defines queues and exchanges (topology).

`queue_consumer.xml` # defines consumers that listen to the queues.

A/D: `communication.xml` is used for defining topics for Adobe Commerce modules, not needed when consuming third-party messages directly.

C: `queue_publisher.xml` is used for publishing messages, not consuming them.

Reference:

Adobe Commerce DevDocs - Message queues

NEW QUESTION # 45

A client reports an issue with indexers that are failing and remain stuck. The client asks a Developer to solve this issue. What recommended solution should the Developer use?

- A. Create a cron job that runs `bin/magento indexer:reindex` periodically.
- **B. In `app/etc/env.php` set `indexer_sync_mode -> false` under the `indexer` node.**
- C. Run `bin/magento indexer:set-mode realtime <indexer_list>`.

Answer: B

Explanation:

Adobe Commerce recommends running indexers in asynchronous (scheduled) mode, not realtime mode.

This is because:

* Realtime mode (Option C) updates indexers every time related data changes, which causes performance issues and potential indexer lockups under high load.

* Manual cron job (Option A) is not recommended since Adobe Commerce already has a built-in cron system that manages indexers efficiently when properly configured.

* Setting `indexer_sync_mode -> false` in `app/etc/env.php` (Option B) ensures that indexers run in "scheduled" mode, meaning they are updated via cron jobs in the background. This prevents them from becoming stuck in the "processing" state and aligns with Adobe's best practices for production environments.

This configuration change tells Magento to defer indexing operations to scheduled jobs, which helps avoid race conditions and long-running lock issues.

Official Documentation Extracts:

* "Adobe recommends running indexers on schedule (asynchronous mode). This is controlled by the indexer configuration in the `app/etc/env.php` file."- Adobe Commerce DevDocs: Configure indexers

* "To enable scheduled (asynchronous) indexing, set `indexer_sync_mode` to `false` in `app/etc/env.php`.

This is the recommended mode for production systems."- Adobe Commerce Configuration Reference

NEW QUESTION # 46

An Adobe Commerce Developer creates a module that adds a product attribute via a data patch.

Adhering to best practices, how should the Developer remove this product attribute when the module is uninstalled?

- A. Create a new CLI command that needs to be executed before the `bin/magento module:uninstall Vendor_ModuleName`.
- B. Delete the custom attribute directly from the database.
- **C. Make the patch implement `Magento\Framework\Setup\Patch\PatchRevertableInterface` with the `revert()` method in it.**

Answer: C

NEW QUESTION # 47

In an Adobe Commerce store, there is a product attribute called `external_service_id`. A Developer must ensure the attribute is only available for specific users via the API.

How should the Developer achieve the required permissions?

- **A. Setup a custom permission control at the attribute level because it is not supported out of the box.**
- B. Implement an `afterGet` plugin and exclude the attribute for non-authorized users.
- C. Configure the access control list (ACL) resource for the `external_service_id` attribute via etc `/extension_attributes.xml`.

Answer: A

Explanation:

Out of the box, Adobe Commerce does not support per-attribute ACL permissions. ACL resources can restrict access to API endpoints or modules, but not individual product attributes.

Therefore, to restrict access to a specific attribute like `external_service_id`, the developer must implement custom permission control logic.
