PMI CPMAI_v7 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">CPMAI Methodology: This domain measures the skills of a Project Manager and outlines the distinctive characteristics of AI projects compared to traditional software development. It investigates failure drivers, ROI justification, data quantity and quality challenges, proof-of-concept issues, real-world deployment barriers, lifecycle continuity, vendor mismatches, stakeholder misalignment, and adaptation of waterfall, lean, and agile approaches through the six phases of the CPMAI framework.
Topic 2	<ul style="list-style-type: none">Managing AI: This section is for the Project Manager and involves assessing model performance through quality assurance practices, validation techniques, overfitting and underfitting strategies, alignment with KPIs, and iterative refinements. It additionally covers the deployment of AI from training to inference, operationalization in production environments, on-premise or cloud resource selection, data lifecycle management, version control, and the choice of appropriate machine learning services.
Topic 3	<ul style="list-style-type: none">Machine Learning: This section is aimed at the DataAI Lead and addresses practical machine learning applications. It begins with classification, clustering, and reinforcement algorithms, including ensemble methods and evaluation against business needs. Afterwards, it examines neural network architecture design and deep learning implementation across multiple problem types. Generative AI and LLMs follow, covering use-case suitability, limitations, operation explanations, prompt engineering, fine-tuning, and integrating these technologies into augmented intelligence solutions.

PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q71-Q76):

NEW QUESTION # 71

You're in charge of marketing at your organization and you've been tasked with using AI to help create marketing images. What's a good solution for this need?

- A. Generative AI solutions for content generation
- B. Image and object detection and recognition systems
- C. Autonomous patterns and process automation
- D. Decision tree and Random Forest approaches

Answer: A

Explanation:

Generative AI is defined in the CPMAI Glossary as "AI systems that create new data (e.g., text, images, music) based on patterns learned from existing data." Using Generative AI for content generation directly addresses the need to produce marketing images automatically.

NEW QUESTION # 72

In what way would you be using Generative AI if you used the results of the Generative AI solution to improve and accelerate your job?

- A. As an autonomous system removing the human from the loop
- B. As a programmatic approach for automation
- C. Used for Hyperpersonalization
- D. As an Augmented Intelligence system

Answer: D

Explanation:

The CPMAI Glossary defines Augmented Intelligence as "enhancing human abilities with AI," where AI outputs are leveraged by humans to improve decision-making or productivity. Using Generative AI to accelerate or improve your own work is precisely an Augmented Intelligence use case, distinct from full autonomy or simple automation .

NEW QUESTION # 73

You have been receiving customer data for the past six months. However recently you notice that this data has drastically changed due to the upcoming holiday season.

What seems to be taking place?

- A. An incomplete milestone list
- **B. Data Drift**
- C. Model Drift
- D. Lack of stakeholder support

Answer: B

Explanation:

A sudden shift in the incoming data distribution-such as seasonal changes in customer behavior-is known as data drift. CPMAI defines model drift as "degradation in a model's performance over time as the underlying data distribution changes," implying that the root cause is the data itself shifting. Recognizing data drift is the first step in adapting both data pipelines and models to maintain performance .

NEW QUESTION # 74

You're being told by upper management that you need to manage a new AI project. You need to determine the AI project fit to make sure you're actually solving a real business problem.

During Phase I: Business Understanding, you should consider at least one of the following (Select all that apply):

- A. Explores a proof of concept for an AI project
- **B. Solves an already solved problem but does it better and cheaper**
- C. Has the "cool" factor
- **D. Solves a previously unsolved problem**
- **E. Enhance revenue**
- **F. Improve company competitiveness in the market**

Answer: B,D,E,F

Explanation:

Phase I begins with Determine Business Objectives to ensure the AI initiative aligns to real business needs.

Teams evaluate whether the solution will enhance revenue, solve a previously unsolved problem, improve competitive positioning, or "provide enough ROI/impact...and be better/more impactful than the current, non- cognitive, heuristic approach" (i.e., do something already addressed but do it better and cheaper). Proof-of- concepts (A) and "cool" factors (E) are not valid business objectives under CPMAI's Business Understanding tasks.

NEW QUESTION # 75

One of the key elements of a data-centric methodology is the data requirements phase. During CPMAI Phase II, several unexpected issues have developed and are now threatening the data collection efforts.

What course of action might make the issue worse?

- A. See if you can adjust the scope of this interaction to continue with the project
- B. See if you can purchase the data needed to continue with the project
- C. See if you already have access to enough data to continue with the project
- **D. See if you can expand the scope to continue with the project**

Answer: D

Explanation:

In Phase II: Data Understanding, CPMAI urges teams to rigorously assess data feasibility-asking whether the data is available, sufficient in quality, and properly aligned with business goals-and to perform a Go/No- Go decision before proceeding . Expanding project scope in the face of data issues violates the methodology's iterative, scope-controlled approach. Instead, CPMAI

recommends either down-scoping (Option C), verifying existing data sufficiency (Option B), or identifying necessary data sources (Option D) to resolve issues without amplifying risk.
