

# Trustworthy AZ-305 Exam Content, AZ-305 Frenquent Update

2026 Latest PrepAwayTest AZ-305 PDF Dumps and AZ-305 Exam Engine Free Share: <https://drive.google.com/open?id=188TtPqIKbk-FCnvxhgp9lQF9dfly8kiZ>

With the help of our AZ-305 study guide, you can adjust yourself to the exam speed and stay alert according to the time-keeper that we set on our AZ-305 training materials. Therefore, you can trust on our AZ-305 exam materials for this effective simulation function will eventually improve your efficiency and assist you to succeed in the AZ-305 Exam. And we believe you will pass the AZ-305 exam just like the other people!

Microsoft AZ-305 Certification Exam has been designed to test the candidate's knowledge and skills in designing solutions for Azure infrastructure. AZ-305 exam covers a wide range of topics, including the design of Azure compute, storage, security, and networking services. Candidates are also tested on their ability to design solutions for high availability, disaster recovery, and scalability. Moreover, the exam tests their knowledge of Azure monitoring and management services, as well as their ability to design solutions that meet compliance requirements.

## AZ-305 Frenquent Update & Printable AZ-305 PDF

Would you like to register Microsoft AZ-305 certification test? Would you like to obtain AZ-305 certificate? Without having enough time to prepare for the exam, what should you do to pass your exam? In fact, there are techniques that can help. Even if you have a very difficult time preparing for the exam, you also can pass your exam successfully. How do you do that? The method is very simple, that is to use PrepAwayTest Microsoft AZ-305 Dumps to prepare for your exam.

Microsoft AZ-305 exam is an excellent opportunity for professionals to demonstrate their skills in designing solutions on the Azure infrastructure. Designing Microsoft Azure Infrastructure Solutions certification will help professionals advance their careers and demonstrate their expertise in Azure. Designing Microsoft Azure Infrastructure Solutions certification is also a valuable asset for organizations that are looking to hire professionals with skills in designing and implementing Azure solutions.

Microsoft AZ-305 exam is designed for professionals who want to demonstrate their expertise in designing Microsoft Azure infrastructure solutions. Designing Microsoft Azure Infrastructure Solutions certification exam is ideal for architects, engineers, and developers who want to validate their skills and knowledge in various aspects of Azure infrastructure, including compute, storage, networking, and security. Passing the AZ-305 Exam indicates that a candidate has the skills and expertise to design and implement robust Azure infrastructure solutions that meet the needs of organizations.

## Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q76-Q81):

### NEW QUESTION # 76

You have an Azure subscription that contains a virtual network named VNET1 and 10 virtual machines. The virtual machines are connected to VNET1.

You need to design a solution to manage the virtual machines from the internet. The solution must meet the following requirements:

- \* Incoming connections to the virtual machines must be authenticated by using Azure Multi-Factor Authentication (MFA) before network connectivity is allowed.
- \* Incoming connections must use TLS and connect to TCP port 443.
- \* The solution must support RDP and SSH.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Explanation:

### NEW QUESTION # 77

You plan to deploy an Azure web app named App1 that will use Azure Active Directory (Azure AD) authentication.

App1 will be accessed from the internet by the users at your company. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to recommend a solution to ensure that the users can connect to App1 without being prompted for authentication and can access App1 only from company-owned computers.

What should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/walkthrough-register-app-azure-active-directory#:~:text=Create%20an%20application%20registration%201%20Create%20an%20application,the%20options%20and%20click%20on%20Add%20permissions.%20>

#### NEW QUESTION # 78

You have the following projects;

\* Project1: The development of an app that processes scanned images stored in an Azure Blob Storage account

\* Project2: The migration of an on-premises app that processes log files as they arrive in an SMB file share

\* Project3: The migration of an on-premises app that processes PDF documents stored on a local file system The projects have the requirements shown in the following table.

Project3 does NOT support the use of containers.

You need to recommend a compute solution for the projects.

What should you include in the recommendation for each project? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

#### NEW QUESTION # 79

You are designing an Azure resource deployment that will use Azure Resource Manager templates. The deployment will use Azure Key Vault to store secrets.

You need to recommend a solution to meet the following requirements:

- Prevent the IT staff that will perform the deployment from retrieving the secrets directly from Key Vault.

- Use the principle of least privilege.

Which two actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a Key Vault access policy that allows all list key permissions, list secret permissions, and list certificate permissions.
- B. Assign the Key Vault Contributor role to the IT staff.
- C. Assign the IT staff a custom role that includes the Microsoft.KeyVault/Vaults/Deploy/Action permission.
- D. Create a Key Vault access policy that allows all get key permissions, get secret permissions, and get certificate permissions.
- E. From Access policies in Key Vault, enable access to the Azure Resource Manager for template deployment.

**Answer: C,E**

Explanation:

B: To access a key vault during template deployment, set `enabledForTemplateDeployment` on the key vault to true.

D: The user who deploys the template must have the `Microsoft.KeyVault/vaults/deploy/action` permission for the scope of the resource group and key vault.

Incorrect Answers:

E: To grant access to a user to manage key vaults, you assign a predefined key vault Contributor role to the user at a specific scope.

If a user has Contributor permissions to a key vault management plane, the user can grant themselves access to the data plane by setting a Key Vault access policy. You should tightly control who has Contributor role access to your key vaults. Ensure that only authorized persons can access and manage your key vaults, keys, secrets, and certificates.

<https://docs.microsoft.com/en-us/azure/key-vault/general/overview-security>

#### NEW QUESTION # 80

You need to recommend a solution to ensure that App1 can access the third-party credentials and access strings. The solution must meet the security requirements.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Scenario: Security Requirement

All secrets used by Azure services must be stored in Azure Key Vault.

Services that require credentials must have the credentials tied to the service instance. The credentials must NOT be shared between services.

Box 1: A service principal

A service principal is a type of security principal that identifies an application or service, which is to say, a piece of code rather than a user or group. A service principal's object ID is known as its client ID and acts like its username. The service principal's client secret acts like its password.

Note: Authentication with Key Vault works in conjunction with Azure Active Directory (Azure AD), which is responsible for authenticating the identity of any given security principal.

A security principal is an object that represents a user, group, service, or application that's requesting access to Azure resources. Azure assigns a unique object ID to every security principal.

Box 2: A role assignment

You can provide access to Key Vault keys, certificates, and secrets with an Azure role-based access control.
