JUNIPER JN0-351 STUDY GUIDE PDF

Juniper JNCIS Routing and Switching Certification Questions & Answers

Details of the Exam-Syllabus-Questions

JN0-351

Juniper Networks Certified Specialist Enterprise Routing and Switching
65 Questions Exam – Variable (60-70% Approx.) Cut Score – Duration of 90 minutes

What's more, part of that PassLeaderVCE JN0-351 dumps now are free: <https://drive.google.com/open?id=1FIzZvX0mDPcQ0IUPPODmgfcw6Ms3u2hs>

The 24/7 support system is there for the students to assist them in the right way and solve their real issues quickly. The PassLeaderVCE Juniper JN0-351 can be used instantly after buying it from us. Free demos and up to 1 year of free updates are also available at SITE. Buy the PassLeaderVCE Juniper JN0-351 Now and Achieve Your Dreams With Us!

In this age of anxiety, everyone seems to have great pressure. If you are better, you will have a more relaxed life. JN0-351 guide materials allow you to increase the efficiency of your work. You can spend more time doing other things. Our JN0-351 study questions allow you to pass the exam in the shortest possible time. Just study with our JN0-351 exam braindumps 20 to 30 hours, and you will be able to pass the exam.

>> JN0-351 Exam Tips <<

Updated Juniper JN0-351 Practice Material In 1 year

Our JN0-351 exam guide is suitable for everyone whether you are a business man or a student, because you just need 20-30 hours to practice on our JN0-351 exam questions, then you can attend to your JN0-351 exam. There is no doubt that you can get a great grade. If you follow our JN0-351 learning pace, you will get unexpected surprises. What are you waiting for? Just choose JNCIS-ENT guide question to improve your knowledge to pass JN0-351 exam, which is your testimony of competence. You will get what you are dreaming for.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 exam.
Topic 2	<ul style="list-style-type: none"> • Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
Topic 3	<ul style="list-style-type: none"> • Spanning Tree: Networking professionals explore the principles and advantages of the Spanning Tree Protocol (STP) to ensure loop-free topologies in Layer 2 networks.
Topic 4	<ul style="list-style-type: none"> • Layer 2 Security: This topic introduces Layer 2 protection mechanisms and firewall filters to fortify network security. Practical skills in configuring, monitoring, and troubleshooting these features prepare candidates to address exam objectives and real-world challenges effectively.
Topic 5	<ul style="list-style-type: none"> • IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.
Topic 6	<ul style="list-style-type: none"> • OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which two statements are correct about IS-IS? (Choose two.)

- A. IS-IS has two metric types and Junos sends both by default.
- B. IS-IS sends a maximum metric value of 63 by default.
- C. IS-IS only allows you to configure two areas.
- D. IS-IS uses IPv6 as its transport protocol in the Junos OS implementation.

Answer: A,B

NEW QUESTION # 69

What are two reasons for creating multiple areas in OSPF? (Choose two.)

- A. to reduce the convergence time
- B. to increase the number of adjacencies in the backbone
- C. to reduce LSA flooding across the network
- D. to increase the size of the LSDB

Answer: A,C

Explanation:

Explanation

Option A is correct. Creating multiple areas in OSPF can help to reduce the convergence time . This is because changes in one area do not affect other areas, so fewer routers need to run the SPF algorithm in response to a change.

Option D is correct. Creating multiple areas in OSPF can help to reduce Link State Advertisement (LSA) flooding across the network. This is because LSAs are not flooded out of their area of origin.

NEW QUESTION # 70

What are two characteristics of RSTP alternate ports? (Choose two.)

- A. RSTP alternate ports provide an alternate lower cost path to the root bridge.
- B. RSTP alternate ports are active ports used to forward frames toward the root bridge.
- C. RSTP alternate ports block traffic while receiving superior BPDUs from a neighboring switch.
- D. RSTP alternate ports provide an alternate higher cost path to the root bridge.

Answer: C,D

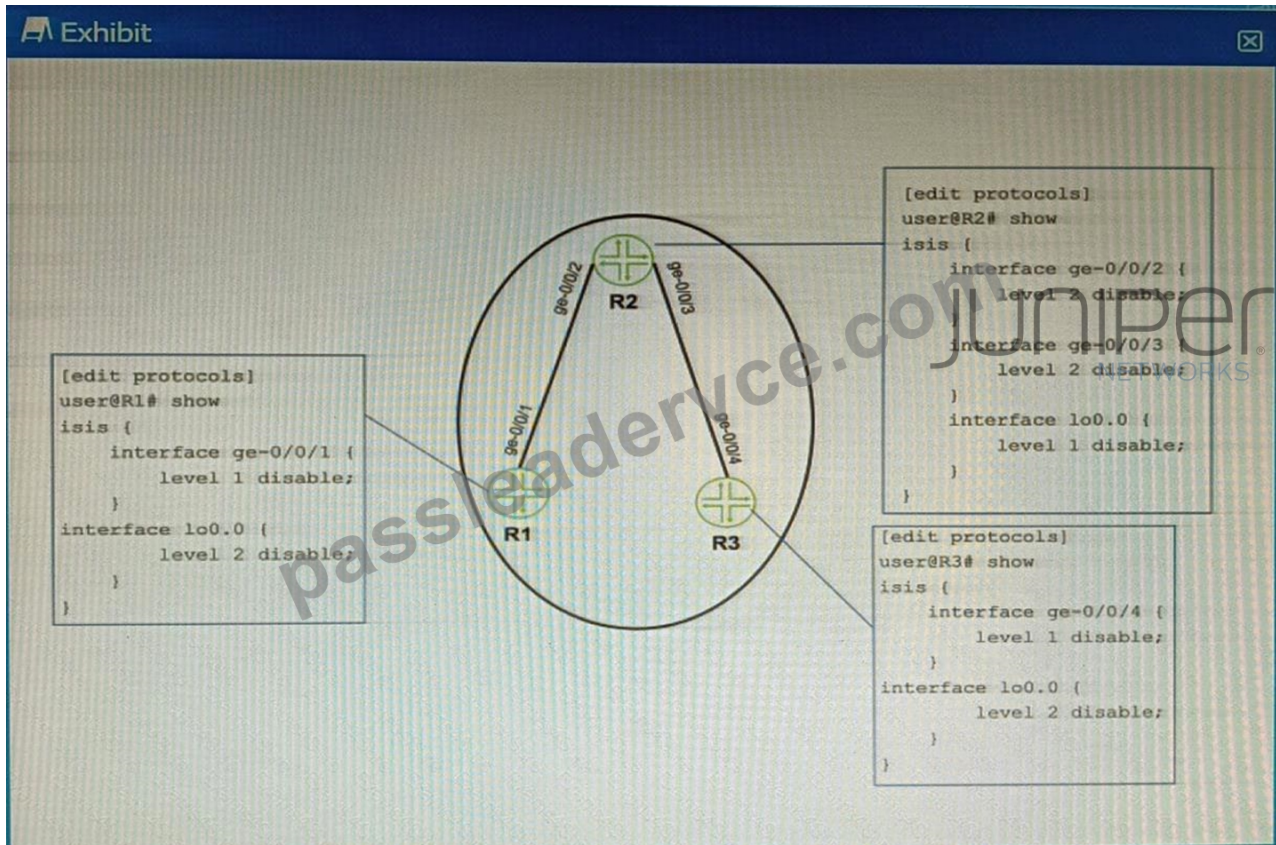

Explanation:

A is correct because RSTP alternate ports block traffic while receiving superior BPDUs from a neighboring switch. An alternate port is a backup port for a root port, which means it receives better BPDUs from another bridge than the current root port1. However, an alternate port does not forward any traffic, as it is in a discarding state2. It only listens to BPDUs and waits for the root port to fail. If the root port fails, the alternate port can immediately transition to a forwarding state and become the new root port1.

C is correct because RSTP alternate ports provide an alternate higher cost path to the root bridge. An alternate port is selected based on the same criteria as the root port, which are the lowest bridge ID, the lowest path cost, the lowest sender port ID, and the lowest receiver port ID3. However, an alternate port receives a higher cost BPDU than the root port, otherwise it would be the root port itself1. Therefore, an alternate port provides an alternate higher cost path to the root bridge than the root port.

NEW QUESTION # 71

Exhibit

Referring to the exhibit, which two configuration changes must you apply for packets to reach from R1 to R3 using IS-IS? (Choose two.)

- A. On R3 enable Level 1 on the ge-0/0/4 interface
- B. On R3 disable Level 2 on the ge-0/0/4 interface.
- C. On R1, enable Level 1 on the ge-0/0/1 interface.
- D. On R1, disable Level 2 on the ge-0/0/1 interface.

Answer: A,C

Explanation:

Explanation

A: On R1, enable Level 1 on the ge-0/0/1 interface. In IS-IS, both levels (Level 1 and Level 2) are enabled by default when you enable IS-IS on an interface¹. Level 1 systems route within an area². If the destination is outside an area, Level 1 systems route toward a Level 2 system². Therefore, enabling Level 1 on the ge-0/0/1 interface on R1 would allow packets to reach from R1 to R3.

D: On R3 enable Level 1 on the ge-0/0/4 interface Similarly, enabling Level 1 on the ge-0/0/4 interface on R3 would allow packets to reach from R1 to R3.

These explanations are based on the IS-IS configuration documents and learning resources available at Juniper Networks¹ and Cisco^{3,4}.

NEW QUESTION # 72

Which statement about aggregate routes is correct?

- A. Aggregate routes are used for advertising summarized network prefixes.
- B. Aggregate routes can only be used for static routing but not for dynamic routing protocols.
- C. Aggregate routes are automatically generated for all of the subnets in a routing table.
- D. Aggregate routes are always preferred over more specific routes, even when the specific routes have a better path.

Answer: A

Explanation:

Explanation

Aggregate routes are used for advertising summarized network prefixes^{1,2}. They help minimize the number of routing tables in an IP network by consolidating selected multiple routes into a single route advertisement¹. This approach is in contrast to non-aggregation routing, in which every routing table contains a unique entry for each route¹.

Therefore, option D is correct. Options A, B, and C are not correct because:

Aggregate routes can be used with both static routing and dynamic routing protocols¹.

Aggregate routes are not automatically generated for all of the subnets in a routing table. They need to be manually configured¹.

Aggregate routes are not always preferred over more specific routes. The route selection process in Junos OS considers several factors, including route preference and metric, before determining the active route¹.

NEW QUESTION # 73

.....

These latest Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) Questions were made by PassLeaderVCE professionals after working day and night so that users can prepare for the Juniper JN0-351 exam successfully. PassLeaderVCE even guarantees you that you can pass the Juniper JN0-351 Certification test on the first try with your untiring efforts.
