Training Databricks-Certified-Data-Analyst-Associate Material - Databricks-Certified-Data-Analyst-Associate Practice Test Fee

What's more, part of that PassSureExam Databricks-Certified-Data-Analyst-Associate dumps now are free: https://drive.google.com/open?id=11n5jQ91APRf3luLTp2f8LHMBL9U8yb9d

Now you do not need to worry about the relevancy and top standard of PassSureExam Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) exam questions. These Databricks Databricks-Certified-Data-Analyst-Associate dumps are designed and verified by qualified Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) exam trainers. Now you can trust PassSureExam Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) practice questions and start preparation without wasting further time.

Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	• Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.
Topic 2	• Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints • warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint • warehouses, trade-off between cluster size and cost for Databricks SQL endpoints • warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.
Topic 3	• Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.

Topic 4	• SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.
Topic 5	• Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moroever, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.

Databricks-Certified-Data-Analyst-Associate Practice Test Fee - Technical Databricks-Certified-Data-Analyst-Associate Training

Just download the Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) PDF dumps file and start the Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) exam questions preparation right now. Whereas the other two Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) practice test software is concerned, both are the mock Databricks Databricks-Certified-Data-Analyst-Associate Exam Dumps and help you to provide the real-time Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) exam environment for preparation.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22
A data analyst creates a Databricks SQL Query where the result set has the following schema:
region STRING
number_of_customer INT
When the analyst clicks on the "Add visualization" button on the SQL Editor page, which of the following types of visualizations will be selected by default?

- A. Histogram
- B. Line Chart
- C. There is no default. The user must choose a visualization type.
- D. Violin Chart
- E. IBar Chart

Answer: E

Explanation:
According to the Databricks SQL documentation, when a data analyst clicks on the "Add visualization" button on the SQL Editor page, the default visualization type is Bar Chart. This is because the result set has two columns: one of type STRING and one of type INT. The Bar Chart visualization automatically assigns the STRING column to the X-axis and the INT column to the Y-axis. The Bar Chart visualization is suitable for showing the distribution of a numeric variable across different categories. Reference: Visualization in Databricks SQL, Visualization types

NEW QUESTION # 23
What is used as a compute resource for Databricks SQL?

- A. Single-node clusters
- B. Standard clusters
- C. SQL warehouses
- D. Downstream BI tools integrated with Databricks SQL

Answer: C

NEW QUESTION # 24
What does Partner Connect do when connecting Power Bl and Tableau?

- A. Downloads a configuration file for connection by Power Bl or Tableau to a SQL Warehouse (formerly known as a SQL Endpoint).
- B. Creates a Personal Access Token. downloads and installs an ODBC driver, and downloads a configuration file for connection by Power Bl or Tableau to a SQL Warehouse (formerly known as a SQL Endpoint).
- C. Creates a Personal Access Token for authentication into Databricks SQL and emails it to you.
- D. Downloads and installs an ODBC driver.

Answer: B

Explanation:
When connecting Power BI and Tableau through Databricks Partner Connect, the system automates several steps to streamline the integration process:
Personal Access Token Creation: Partner Connect generates a Databricks personal access token, which is essential for authenticating and establishing a secure connection between Databricks and the BI tools.
ODBC Driver Installation: The appropriate ODBC driver is downloaded and installed. This driver facilitates communication between the BI tools and Databricks, ensuring compatibility and optimal performance.
Configuration File Download: A configuration file tailored for the selected BI tool (Power BI or Tableau) is provided. This file contains the necessary connection details, simplifying the setup process within the BI tool.
By automating these steps, Partner Connect ensures a seamless and efficient integration, reducing manual configuration efforts and potential errors.

NEW QUESTION # 25
A data analyst is attempting to drop a table my_table. The analyst wants to delete all table metadata and data.
They run the following command:
DROP TABLE IF EXISTS my_table;
While the object no longer appears when they run SHOW TABLES, the data files still exist.
Which of the following describes why the data files still exist and the metadata files were deleted?

- A. The table was managed
- B. The table's data was smaller than 10 GB
- C. The table was external
- D. The table did not have a location
- E. The table's data was larger than 10 GB

Answer: C

Explanation:
An external table is a table that is defined in the metastore, but its data is stored outside of the Databricks environment, such as in S3, ADLS, or GCS. When an external table is dropped, only the metadata is deleted from the metastore, but the data files are not affected. This is different from a managed table, which is a table whose data is stored in the Databricks environment, and whose data files are deleted when the table is dropped. To delete the data files of an external table, the analyst needs to specify the PURGE option in the DROP TABLE command, or manually delete the files from the storage system. Reference: DROP TABLE, Drop Delta table features, Best practices for dropping a managed Delta Lake table

NEW QUESTION # 26
A data team has been given a series of projects by a consultant that need to be implemented in the Databricks Lakehouse Platform. Which of the following projects should be completed in Databricks SQL?

- A. Automating complex notebook-based workflows with multiple tasks
- B. Testing the quality of data as it is imported from a source
- C. Tracking usage of feature variables for machine learning projects
- D. Segmenting customers into like groups using a clustering algorithm
- E. Combining two data sources into a single, comprehensive dataset

Answer: E

Explanation:
Databricks SQL is a service that allows users to query data in the lakehouse using SQL and create visualizations and dashboards1. One of the common use cases for Databricks SQL is to combine data from different sources and formats into a single, comprehensive dataset that can be used for further analysis or reporting2. For example, a data analyst can use Databricks SQL to join data from a CSV file and a Parquet file, or from a Delta table and a JDBC table, and create a new table or view that contains the combined data3. This can help simplify the data management and governance, as well as improve the data quality and consistency. Reference:
