

Top Exam SC-401 Torrent 100% Pass | Valid SC-401: Administering Information Security in Microsoft 365 100% Pass

What's more, part of that ValidTorrent SC-401 dumps now are free: https://drive.google.com/open?id=10-ENeJ1-9SNoKdFz_OGASZdBbqMj-iA-

The third format of ValidTorrent product is the desktop Microsoft SC-401 practice exam software. You can access the Administering Information Security in Microsoft 365 (SC-401) practice exam after installing this software on your Windows computer or laptop. Specifications we have discussed in the paragraph of the web-based version are available in desktop SC-401 Practice Exam software.

The Administering Information Security in Microsoft 365 (SC-401) practice test questions are customizable which means that the customers can customize the time and SC-401 exam questions types according to their needs. These Microsoft SC-401 Practice Tests are based on real based examination scenarios which help the students practice under real SC-401 exam questions pressure and learn to control it.

Microsoft SC-401 New Braindumps Book | Download SC-401 Pdf

Many people worry about buying electronic products on Internet, like our SC-401 preparation quiz, we must emphasize that our SC-401 simulating materials are absolutely safe without viruses, if there is any doubt about this after the pre-sale, we provide remote online guidance installation of our SC-401 Exam Practice. It is worth noticing that some people who do not use professional anti-virus software will mistakenly report the virus.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
Topic 2	<ul style="list-style-type: none"> Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
Topic 3	<ul style="list-style-type: none"> Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.
Topic 4	<ul style="list-style-type: none"> Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q149-Q154):

NEW QUESTION # 149

You have a Microsoft S65 E5 subscription that contains two users named User1 and Admin1. Admin1 manages audit retention policies for the subscription.

You need to ensure that the audit logs of User1 will be retained for 10 years.

What should you do first?

- A. Assign a Microsoft Purview Audit (Premium) add-on license to User1.
- B. Assign a 10-year audit log retention add-on license to User1.**
- C. Assign a Microsoft Purview Audit (Premium) add-on license to Admin1.
- D. Assign a 10-year audit log retention add-on license to Admin1.

Answer: B

Explanation:

The scenario is about retaining audit logs for User1 for 10 years in Microsoft 365. Admin1 is responsible for managing audit retention policies, but the requirement specifically applies to User1's audit logs.

Key points:

Microsoft 365 E5 includes Audit (Premium) by default. This provides access to advanced auditing features and retention up to 1 year.

To retain audit logs for longer than 1 year (such as 10 years), Microsoft requires the 10-year Audit Log Retention Add-on license. This license must be assigned to the user whose activities need to be retained (User1), not the administrator (Admin1).

Admin1 only needs permissions to configure and manage retention policies, but the actual long-term retention is tied to the licensed users' activity.

Why other options are incorrect:

A). Assign a Microsoft Purview Audit (Premium) add-on license to User1: Not needed because E5 already includes Audit (Premium).

B). Assign a 10-year audit log retention add-on license to Admin1: Incorrect because Admin1 is not the user whose logs must be retained; the license applies to the user being audited, not the admin.

D). Assign a Microsoft Purview Audit (Premium) add-on license to Admin1: Again, unnecessary because E5 already includes Audit (Premium), and Admin1's license does not affect User1's log retention.

Reference:

Microsoft Learn: Audit (Premium) licensing and requirements

"To retain audit records for 10 years, assign the 10-year Audit Log Retention Add-on license to the users whose activities you want to retain."

NEW QUESTION # 150

You have a Microsoft 365 E5 subscription that contains four users named User1, User2, User3, and User4 and a file named File1.docx. File1 has a sensitivity label applied. The label is configured as shown in the following table.

Which users can summarize File1 by using Microsoft 365 Copilot?

- A. User1 and User2 only
- B. User1 only
- C. User1, User2, and User3 only
- D. User1, User2, User3, and User4

Answer: A

Explanation:

Step 1 - Understand the scenario

* We have a Microsoft 365 E5 subscription with Copilot available.

* File1.docx has a sensitivity label applied.

* The sensitivity label controls usage rights (Owner, Editor, Restricted Editor, Viewer).

* The question: Which users can summarize File1 with Microsoft 365 Copilot?

Step 2 - Sensitivity labels and usage rights

When a sensitivity label is configured to apply encryption with usage rights, each role has different levels of access:

* Owner: Full control (read, edit, reshare, extract, etc.).

* Editor: Can read, edit, and copy content.

* Restricted Editor: Can read and edit in place, but cannot copy, print, or extract content.

* Viewer: Can only read (view) the content.

Reference: Rights included in usage rights for sensitivity labels

Step 3 - Copilot's requirements for summarization

Microsoft 365 Copilot requires that the user has the ability to read and extract text from the document in order to generate a summary.

* Owners and Editors: # Can both read and extract # Copilot works.

* Restricted Editors: # Cannot copy/extract text # Copilot cannot summarize.

* Viewers: # Can only view # Copilot cannot process content for summarization.

Reference: Microsoft 365 Copilot and sensitivity labels

"Users must have extract and copy rights in order for Microsoft 365 Copilot to process and summarize labeled documents." Step 4

- Apply to the case

* User1 (Owner) # Can summarize.

* User2 (Editor) # Can summarize.

* User3 (Restricted Editor) # Cannot summarize.

* User4 (Viewer) # Cannot summarize.

NEW QUESTION # 151

You have a Microsoft 365 E5 subscription that contains a Microsoft Teams channel named Channel1. Channel1 contains research and development documents.

You plan to implement Microsoft 365 Copilot for the subscription.

You need to prevent the contents of files stored in Channel1 from being included in answers generated by Copilot and shown to unauthorized users.

What should you use?

- A. Microsoft Purview insider risk management
- B. communication compliance policy

- C. Microsoft Purview Information Barriers (IBs)
- **D. sensitivity labels**

Answer: D

Explanation:

Correct:

* sensitivity labels

To prevent the contents of files stored in Channel1 from being included in Microsoft 365 Copilot responses and ensure unauthorized users cannot access them, you should use Microsoft Purview Sensitivity Labels.

Sensitivity labels allow you to classify, protect, and restrict access to sensitive files. You can configure label-based encryption and access control policies to ensure that only authorized users can access or interact with the files in Channel1. Microsoft 365 Copilot respects sensitivity labels, meaning if a file is labeled with restricted permissions, Copilot will not use it in generated responses for unauthorized users.

Incorrect:

* communication compliance policy

* data loss prevention (DLP)

* Microsoft Purview Information Barriers (IBs)

* Microsoft Purview insider risk management

Note:

To prevent unauthorized access to channel file contents via Microsoft 365 Copilot, apply sensitivity labels with Data Loss Prevention (DLP) policies to restrict content processing.

Additionally, manage channel memberships, restrict sharing links in SharePoint, and enforce external access policies.

Use sensitivity labels and DLP policies

1. Apply labels: Assign sensitivity labels like "Confidential" to sensitive documents in the channel.

2. Create DLP policies: In Microsoft Purview, configure a policy to prevent Copilot from processing content that has specific sensitivity labels. This stops Copilot from summarizing sensitive files for unauthorized users.

NEW QUESTION # 152

You have a Microsoft 365 subscription. Auditing is enabled.

A user named User1 is a member of a dynamic security group named Group1.

You discover that User1 is no longer a member of Group1.

You need to search the audit log to identify why User1 was removed from Group1.

Which two activities should you use in the search? To answer, select the appropriate activities in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 153

You have a Microsoft 365 ES subscription

You plan to create an met data match (EDM) classifier named EDM1.

You need to grant permissions to hash and upload the sensitive
