

Avail [Updated 2026]! IBM C1000-189 Exam Questions | Alleviate Exam Stress

2026 Latest PassExamDumps C1000-189 PDF Dumps and C1000-189 Exam Engine Free Share: https://drive.google.com/open?id=1f-GpZ3OWJzFhYEXYV4wuxP_Dtkn0P7yG

If you want to demonstrate your expertise in solving complex IBM real-life problems, then you need to pass the IBM C1000-189 certification exam. However, passing this exam is not an easy task. It requires you to master complicated subjects related to IBM Instana Observability v1.0.277 Administrator - Professional. To help you prepare for this exam, PassExamDumps offers verified IBM C1000-189 Exam Questions that are ruling the preparation world.

IBM C1000-189 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">• Security and Compliance: This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards. |
| Topic 2 | <ul style="list-style-type: none">• Operations: This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance. |
| Topic 3 | <ul style="list-style-type: none">• Troubleshooting: This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments. |

2026 C1000-189 – 100% Free New Test Braindumps | High-quality IBM Instana Observability v1.0.277 Administrator - Professional Latest Braindumps Pdf

We have gained high appraisal for the high quality C1000-189 guide question and considerate serves. All content is well approved

by experts who are arduous and hardworking to offer help. They eliminate banal knowledge and exam questions out of our C1000-189 real materials and add new and essential parts into them. And they also fully analyzed your needs of C1000-189 exam dumps all the time. Our after sales services are also considerate. If you get any questions with our C1000-189 guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the C1000-189 Exam, we will make up to you and relieve you of any loss. Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our C1000-189 real materials. So all operations are conducted to help you pass the exam with efficiency.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which environment requires an air-gapped Instana installation?

- A. An environment with firewall and proxy restrictions that disable access to Instana's auto update
- B. An environment that allows unrestricted data transfer internally
- C. An environment with high-speed internet connectivity
- **D. An environment with restricted or no access to any external network or internet**

Answer: D

Explanation:

According to the IBM Instana Observability documentation, an air-gapped installation is required when your environment is disconnected from the internet or has no access to external networks. The documentation states: "Air-gapped and restricted environments require deploying Instana without any connection to public repositories or backend services, assuring full isolation for compliance and regulatory requirements." The air-gapped setup ensures sensitive data or system configurations are never exposed outside the organization's internal trusted boundaries, making it mandatory for government, defense, or tightly regulated industries. Standard installation processes, including auto-update features and remote license verification, are replaced in air-gapped deployments with manual artifact and key management, as file transfers and package updates must be handled strictly within the controlled environment. The option described in B (high-speed internet) or D (unrestricted internal transfer) does not trigger air-gapping, while option A may require proxy or firewall configuration but is not entirely air-gapped unless full external access is blocked.

NEW QUESTION # 12

What prevents Ansible actions from manual deletion within Instana?

- A. Actions have been imported.
- B. The action is active.
- C. There is no name specified on the action.
- **D. Default Actions cannot be deleted.**

Answer: D

Explanation:

IBM Instana documentation is explicit: some action definitions, including default and built-in (such as Ansible) actions supplied by the platform, cannot be manually deleted by users or admins. It states: "Default Actions-including Ansible integration actions pre-defined by Instana-are protected from manual deletion to ensure availability and platform integrity." This ensures that core automation integrations remain functional and the baseline for remediations, regardless of user error or misconfiguration. Custom or imported actions can be removed, but defaults-tagged as such in the UI-are non-removable, safeguarding operational continuity and maintaining standardized integrations across manual and automated workflows. Active status or name presence does not impact deletion ability; it is the default/built-in status (D) that enforces this lock.

NEW QUESTION # 13

Which SDK can be used for Instana HTTP tracing?

- A. Haskell
- **B. Trace Web**

- C. Configure Web
- D. Programmatic Web

Answer: B

Explanation:

IBM explicitly identifies Trace Web SDK as the framework component for implementing HTTP tracing within Instana's observability ecosystem. The latest content in the IBM Instana documentation (v1.0.307, aligning to v1.0.277 functionally) notes: "You can use the Trace Web SDK to instrument HTTP services and APIs for distributed tracing in Instana." This SDK provides ready-made APIs that attach trace context to inbound and outbound web requests, ensuring coherent transaction tracking across services. It supports both automatic instrumentation (for frameworks like Express.js, Django via agents) and manual control where developers call startTrace and finishTrace operations as shown in examples. Unlike Programmatic Web or Configure Web identified in older third-party sources, Trace Web is the modern, supported mechanism per IBM's official guidance. Haskell is unsupported as an SDK target. Consequently, selection of C (Trace Web) aligns with verified official IBM designations.

NEW QUESTION # 14

Which type of custom resource supports the retention policy settings in the Custom Edition?

- A. ConfigYaml
- **B. CoreSpec**
- C. UnitProp
- D. StorageConf

Answer: B

Explanation:

According to the official IBM Instana Observability documentation (v1.0.304), retention policy settings in Custom Edition are NOT configured in a custom resource called "StorageConf." Instead, they are configured as properties within the CoreSpec of the Core custom resource. The documentation explicitly states: "Overwriting the default retention settings is optional and should only be done consciously. These retention setting values are configured as properties in the CoreSpec." The actual configuration looks like this:

text

kind: Core

metadata:

name: instana-core

namespace: instana-core

spec:

properties:

- name: retention.metrics.rollup5

value: "86400"

- name: config.appdata.shortterm.retention.days

value: "7"

- name: config.synthetic.retention.days

value: "60"

The retention policies for infrastructure metrics, application data, and synthetic monitoring are all configured as properties within the Core spec, not in a separate "StorageConf" custom resource. "StorageConf" refers to storage configurations for raw spans (S3, GCS, Azure), not retention policies.

NEW QUESTION # 15

For Instana Standard Edition, in which file should the salesKey be updated?

- A. download.pl
- B. config.yaml
- **C. license.json**
- D. Gui.api

Answer: C

Explanation:

Licensing in Instana is controlled by a key called "salesKey," which must be placed in the license.json file for Standard Edition. Per

IBM Instana Observability documentation, "The salesKey is part of the license.json file, which must be updated to activate the Instana Standard Edition license." This file is checked at startup and authorizes agent/server deployment, binding entitlement and features to the account. Instana's licensing model relies on proper key management within license.json for compliance and support tracking. The config.yaml file manages agent technical configuration, not licensing. Download.pl and gui.api files are not associated with salesKey or licensing. Any update to the license must be done within license.json and validated by Instana's backend for activation completeness-this procedure is outlined step-by-step in the installation and onboarding guides.

NEW QUESTION # 16

.....

It is known to us that more and more companies start to pay high attention to the C1000-189 certification of the candidates. Because these leaders of company have difficulty in having a deep understanding of these candidates, may it is the best and fast way for all leaders to choose the excellent workers for their company by the C1000-189 Certification that the candidates have gained. More and more workers have to spend a lot of time on meeting the challenge of gaining the C1000-189 certification by sitting for an exam.
