## First-grade Plat-Dev-210 Technical Training Provide Prefect Assistance in Plat-Dev-210 Preparation

If you are still in colleges, it is a good chance to learn the knowledge of the Plat-Dev-210 study engine because you have much time. At present, many office workers are keen on learning our Plat-Dev-210 guide materials even if they are busy with their work. So you should never give up yourself as long as there has chances. In short, what you have learned on our Plat-Dev-210 study engine will benefit your career development.

## Salesforce Certified Omnistudio Developer Sample Questions (Q37-Q42):

### NEW QUESTION # 37

Refer to the exhibit below. What JSON from the DRGetContactDetails action would display all six values correctly shown? BlkCases is a Repeat Block, and the names of the elements are the same as the label names without spaces.

• A.

• B.

```

{
  "Cases": [
    {
      "CaseSubject": "Cannot track order",
      "CaseNumber": "00001234",
      "CaseStatus": "New"
    },
    {
      "CaseSubject": "Billing status",
      "CaseNumber": "00005678",
      "CaseStatus": "Closed"
    }
  ]
}

```

• C.

```

{
  "Cases": [
    {
      "CaseSubject": "Cannot track order",
      "CaseNumber": "00001234",
      "CaseStatus": "New"
    },
    {
      "CaseSubject": "Billing status",
      "CaseNumber": "00005678",
      "CaseStatus": "Closed"
    }
  ],
  "ContactName": "(123) 456-7890",
  "ContactPhone": "jane.doe@example.com",
  "ContactEmail": [
    {
      "CaseNumber": "00001234",
      "CaseSubject": "Billing Issue",
      "CaseStatus": "New"
    },
    {
      "CaseNumber": "00005678",
      "CaseSubject": "Product Inquiry",
      "CaseStatus": "Closed"
    }
  ]
}

```

• D.

**Answer: B**

Explanation:

According to the OmniScript Data JSON page, the OmniScript structure JSON defines the data elements and their properties that are used in an OmniScript. The exhibit shows an OmniScript structure JSON with six elements: ContactName, ContactPhone, ContactEmail, CaseNumber, CaseSubject, and CaseStatus. The DRGetContactDetails action is a DataRaptor Extract action that retrieves data from the Contact and Case objects in Salesforce. The BlkCases element is a Repeat Block that displays a list of cases related to the contact. Therefore, the JSON from the DRGetContactDetails action that would display all six values correctly shown is option A, which has the following structure:

```

{
  "ContactName": "Jane Doe",
  "ContactPhone": "(123) 456-7890",
  "ContactEmail": "jane.doe@example.com",
  "BlkCases": [
    {
      "CaseNumber": "00001234",
      "CaseSubject": "Billing Issue",
      "CaseStatus": "New"
    },
    {
      "CaseNumber": "00005678",
      "CaseSubject": "Product Inquiry",
      "CaseStatus": "Closed"
    }
  ]
}

```

The other options have different structures that do not match the OmniScript structure shown.

**NEW QUESTION # 38**

In an Integration Procedure, a developer needs to perform a multi-step calculation on every element of an array.

Based on best practices, what two methods are recommended?

Choose 2 answers

- A. Use a List Action to merge the array elements together.
- **B. Use a Calculation Action to call a Calculation Procedure.**
- **C. Use a Matrix Action to call a Calculation Matrix.**
- D. Use a Set Values Element inside a Loop Block.

**Answer: B,C**

Explanation:

According to the Integration Procedure Actions page, a Calculation Action can be used to "call a Calculation Procedure that performs calculations on input data" and a Matrix Action can be used to "call a Calculation Matrix that performs calculations on input data".

#### NEW QUESTION # 39

A developer has a requirement to create a child FlexCard that contains all of its parent FlexCard's records in a Data Table. How should the developer configure the parent FlexCard's Node?

- A. {Recorded}
- B. {Records Plat-Dev-210}
- **C. {Records}**
- D. {Params, records}

**Answer: C**

Explanation:

The Node field for the parent FlexCard should be set to {Records}, which is an array of all the records retrieved by the parent FlexCard data source. This will allow the child FlexCard to access the records and display them in a Data Table.

#### NEW QUESTION # 40

An integration procedure uses an HTTP action to make a REST API call. The response from the REST API must be converted into a specific XML structure before sending it as an input to another external web service.

How should the developer configure the Integration Procedure to meet this requirement?

- A. Use a Remote Action that calls the XMLStreamWriter class
- **B. Use a DataRaptor Transform to convert JSON to XML**
- C. Use a Remote Action that calls the XMLStreamReader class
- D. Use a DataRaptor Extract and check the XML checkbox on the Output JSON Path.

**Answer: B**

Explanation:

According to the OmniStudio Developer Guide, "DataRaptor Transform actions can convert JSON to XML and vice versa." Therefore, the correct answer is B.

#### NEW QUESTION # 41

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy via their Community portal. The developer on the project decides to use an OmniScript.

How should the developer configure the OmniScript to provide this functionality?

- A. Use an Edit Block element configured with SOQL statements.
- B. Use an Input Block element and a Data Mapper Post Action element.
- C. Use a Text Block element and a Remote Action element.
- **D. Use an Edit Block element configured with Remote Actions.**

**Answer: D**

Explanation:

In OmniStudio, the Edit Block element is purpose-built for allowing users to dynamically add, edit, or delete rows of related data, such as dependents under a policy. To save these changes, Remote Actions (typically backed by Apex or API) are used to process each record operation (Create/Update/Delete).

\* A. Use an Edit Block element configured with Remote Actions - Correct. This is the recommended and most scalable way to support CRUD operations in OmniScripts for collections (e.g., dependents).

The Edit Block provides UI-level support, while Remote Actions handle back-end interaction with Salesforce or external systems.

Incorrect Options:

\* B. Text Block is for display purposes and cannot manage data input or backend actions.

\* C. Input Block elements do not support row-level add/edit/delete functionality as Edit Blocks do.

\* D. SOQL is a read-only query language and cannot be used to update or delete records directly within an OmniScript.
