最新的 Associate Level EAPA_2025 免費考試真題 (Q26-Q31):

問題 #26

A GIS analyst is about to run analysis using multiple feature layers from the current map. They want to do one final check to ensure which feature classes do and do not have definition queries as expected.

How should the analyst check this most efficiently?

- A. Select layers in Contents > Feature Layer - Data tab > Definition Query
- **B. Contents pane > Filter > Active Definition Query**
- C. Right-click layer in Contents > Properties > Definition Query

答案：B

解題說明：

ArcGIS Pro allows filtering of layers in the Contents pane using various filters. The most efficient way to check which layers have definition queries applied is to use the filter option "Active Definition Query" directly in the Contents pane. This instantly shows only those layers that have active definition queries, allowing rapid verification across multiple layers without needing to click through each layer's properties individually.

- * Option A requires selecting each layer one-by-one.
 - * Option C also requires manual inspection of each layer's properties.
 - * Option B provides a batch view directly within the Contents pane.
- Therefore, the correct answer is B.

問題 #27

A GIS specialist is spending too much time editing text (for example, formatting and placement) associated with specific dynamic features in a series of maps they create regularly. The specialist wants to have fine-grain control of each feature's associated text. Which method is most efficient?

- A. Graphic text
- B. Text map notes
- C. Annotation

答案： C

解題說明：

Annotation allows for feature-linked or standard text placement with fine control over positioning, symbology, and formatting. It maintains a link to spatial features when necessary, ensuring consistent updates and control across multiple map products.

* Graphic text (Option A) is map layout-specific and not dynamic or feature-aware.

* Map notes (Option C) are simple text features often used for temporary mapping tasks and lack fine control for production mapping.

Therefore, the correct answer is B.

-

問題 #28

Which ArcGIS Pro tab gives a user the option to export a map layout to a file?

- A. Project
- B. Map
- C. Share

答案： C

解題說明：

The Share tab in ArcGIS Pro contains all options related to exporting maps, layouts, and sharing data. Export Layout options for formats like PDF, PNG, and others are found here.

* Project tab is used for application-level settings.

* Map tab is for map design and editing.

* Share tab includes all export and sharing options for layouts.

Therefore, the correct answer is C.

問題 #29

A GIS technician wants to perform spatial analysis for an area of interest extending in an east-to-west orientation. The technician needs to preserve the shape of the data.

Which projection should the technician use to minimize distortion?

- A. Hotine oblique Mercator
- B. Transverse Mercator
- C. Lambert conformal conic

答案： C

解題說明：

Lambert Conformal Conic is best suited for regions that extend predominantly in an east-west direction. This projection minimizes distortion in shape (conformal property) for such areas and is widely used for mapping large areas like states, countries, or continents that are wider than they are tall.

* Transverse Mercator (Option A) is better for north-south-oriented regions.

* Hotine Oblique Mercator (Option C) is used for areas that are obliquely oriented along a particular great circle path. Therefore, the correct answer is B.

-

問題 #30

A GIS analyst is trying to buffer single point features one at a time within a feature class by interactively selecting it in a map before buffering. Multiple points are being selected, although one row in the attribute table is highlighted. The analyst does not want to modify the original data.

Which tool should be used to solve this issue?

- A. Multipart To Singlepart
- B. Explode
- C. Split

答案：A

解題說明：

The Multipart To Singlepart tool separates multipart features into individual single-part features. This ensures that when selecting a feature, only the intended single feature is selected, rather than selecting multiple points grouped in a multipart feature.

* Explode (Option A) is not a valid geoprocessing tool for this scenario.

* Split (Option C) is used for dividing features, not separating multipart features.

Therefore, the correct answer is B.
