

HPE7-A02 Test Assessment | New HPE7-A02 Braindumps Questions

OXFORD TEST OF ENGLISH

B2 Practice Test 3

Answer key

Speaking Part 1 Interview Page 3

- 1 Students' own answers
- 2 Students' own answers

3 Sample answer

My English teacher is called Isobel, and she comes from Scotland. She has been teaching me English for three years and I really enjoy her classes. She is always positive and encouraging, and I find that really important.

4 Sample answer

I find I need to write new words down and keep repeating them. I then need to test myself straight away, then the next day and then again, a few days later. It's very important to repeat these tests several times.

5 Sample answer

I think most tourists like to try speaking Italian, and they can say things like hello or goodbye, but that's it. But a lot of tourists just assume that they can speak to you in English and that you will understand.

6 Sample answer

I have a brother and a sister, but I am closest to my sister. She is a year and a half older than me, so we do a lot of things together. My brother is seven years older than me, so I don't see him much.

7 Sample answer

Our last big family get together was my cousin's 18th birthday. She invited me, my sister and all her other cousins, and we had an amazing party in the garden of her house.

8 Sample answer

I prefer to be with my family when we have traditional celebrations like Christmas, because these are important family events. I prefer to be with friends when I'm doing something new or exciting like having a party on the beach or camping in the mountains.

Speaking Part 2 Voice message 1 Page 3

Sample answer

Hi! My name's Jason Smith, and I'm a friend of Emily Watson, who's in your Wednesday painting class. I'd really like to join the class. I did some painting as part of my Art GCSE. However, I'm keen to develop my technique. Emily's told me the class is full at the moment, but could you put me on a waiting list and contact me if a place becomes available? Many thanks.

Speaking Part 2 Voice message 2 Page 3

Sample answer

Hi Jim, I'm well, thank you. That's great news about your new house - how exciting! Where is it and how big is it? I want to know everything! Unfortunately, I'm not free next Thursday, I have to work all day at the restaurant. My sister is free that day, though, and I'm sure she would be happy to help. You should give her a call.

New HPE7-A02 Braindumps Questions - Valid HPE7-A02 Test Sims

Since it was founded, our PrepAwayTest has more and more perfect system, more rich questiondumps, more payment security, and better customer service. Now the HPE7-A02 exam dumps provided by PrepAwayTest have been recognized by masses of customers, but we will not stop the service after you buy. We will inform you at the first time once the HPE7-A02 Exam software

updates, and if you can't fail the HPE7-A02 exam we will full refund to you and we are responsible for your loss.

HP Aruba Certified Network Security Professional Exam Sample Questions (Q113-Q118):

NEW QUESTION # 113

What is a use case for the HPE Aruba Networking ClearPass OnGuard dissolvable agent?

- A. Periodically scanning Linux clients for security issues
- B. Continuously monitoring Windows domain clients for compliance
- **C. Implementing a one-time compliance scan**
- D. Auto-remediating posture issues on clients

Answer: C

Explanation:

The use case for the HPE Aruba Networking ClearPass OnGuard dissolvable agent is implementing a one-time compliance scan. The dissolvable agent is designed to perform a compliance check without requiring a permanent installation on the client device. This is ideal for environments where a quick, temporary assessment of the device's security posture is needed without the overhead of a persistent agent.

1.Dissolvable Agent: The dissolvable agent is downloaded and executed on the client device for a single session, performing the necessary compliance checks before being removed automatically.

2.One-time Compliance Scan: This method is particularly useful for guest or unmanaged devices where a temporary compliance scan is sufficient to ensure security standards are met.

3.Minimal Impact: Since the agent does not persist on the client device, it minimizes the impact on the user's system and does not require ongoing maintenance or updates.

NEW QUESTION # 114

You are setting up an HPE Aruba Networking VIA solution for a company. You have already created a VPN pool with IP addresses for the remote clients. During tests, however, the clients do not receive IP addresses from that pool.

What is one setting to check?

- A. That the pool uses valid, public IP addresses that are assigned to the company
- B. That the pool is referenced in the clients' VIA Connection Profile
- **C. That the pool is associated with the role to which the VIA clients are being assigned**
- D. That the pool uses an IP subnet that is different from any subnet configured on the VPNC

Answer: C

Explanation:

If VIA clients are not receiving IP addresses from the configured VPN pool, one setting to check is whether the pool is associated with the role to which the VIA clients are being assigned. The association between the IP pool and the role ensures that clients assigned to that role receive IP addresses from the correct pool.

1.Role Association: Each role can be associated with a specific IP pool, ensuring that clients assigned to the role receive addresses from the intended pool.

2.IP Allocation: Proper configuration of the IP pool and its association with the role is crucial for correct IP address allocation.

3.VIA Configuration: Ensuring that all settings, including IP pool associations, are correctly configured, facilitates seamless client connectivity.

Reference: Aruba's VIA configuration guides provide detailed steps for setting up VPN pools and associating them with client roles to ensure correct IP address allocation.

NEW QUESTION # 115

A company has AOS-CX switches and HPE Aruba Networking ClearPass Policy Manager (CPPM). The company wants switches to implement 802.1X authentication to CPPM and download user roles.

What is one task that you must complete on the switches to support this use case?

- A. Configure empty user-roles with names that match enforcement profile names on CPPM.
- B. Specify a ClearPass username and password that match the name and RADIUS secret in a CPPM network device entry.

- C. Install the root CA certificate for CPPM's RADIUS certificate in a TA profile on the switches.
- D. Specify CPPM as the RADIUS server with the exact CN in CPPM's HTTPS certificate.

Answer: C

Explanation:

To support 802.1X authentication and download user roles from HPE Aruba Networking ClearPass Policy Manager (CPPM) on AOS-CX switches, you must install the root CA certificate for CPPM's RADIUS certificate in a Trust Anchor (TA) profile on the switches. This ensures that the switches trust the RADIUS server certificate presented by CPPM during the authentication process.

1. Root CA Certificate: Installing the root CA certificate ensures that the switch can verify the authenticity of the RADIUS server certificate provided by CPPM.
2. Trust Anchor Profile: The TA profile on the switch holds the root CA certificate, establishing a trust relationship between the switch and the CPPM RADIUS server.
3. Secure Authentication: This setup is essential for securing the 802.1X authentication process and enabling the download of user roles.

NEW QUESTION # 116

An AOS-CX switch has this admin user account configured on it:
netadmin in the operators group.

You have configured these commands on an AOS-CX switch:

```
tacacs-server host cp.example.com key plaintext &12xl,powmay7855
```

```
aaa authentication login ssh group tacacs local
```

```
aaa authentication allow-fail-through
```

A user accesses the switch with SSH and logs in as netadmin with the correct password. When the switch sends a TACACS+ request to the ClearPass server at cp.example.com, the server does not send a response.

Authentication times out.

What happens?

- A. The user is logged in and allowed to enter auditor commands only.
- B. The user is logged in and granted administrators access.
- C. The user is not allowed to log in.
- D. The user is logged in and granted operator access.

Answer: D

Explanation:

Comprehensive Detailed Explanation

The configuration includes the command `aaa authentication allow-fail-through`, which specifies that if the TACACS+ server fails to respond (e.g., times out), the switch will proceed to the next authentication method in the sequence, which is local. In this scenario:

- * The switch first attempts to authenticate the user against the TACACS+ server.
- * When the TACACS+ server fails to respond, the switch falls back to local authentication.
- * The user netadmin is a local account configured on the switch and belongs to the operators group.
- * As a result, the user is successfully authenticated locally and is granted operator level access.

References

- * Aruba AOS-CX User Guide: Authentication fallback mechanisms.
- * TACACS+ fallback behavior for HPE Aruba switches.

NEW QUESTION # 117

You have installed an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch to monitor a particular function.

Which additional step must you complete to start the monitoring?

- A. Enable NAE, which is disabled by default.
- B. Reboot the switch.
- C. Create an agent from the script.
- D. Edit the script to define monitor parameters.

Answer: C

Explanation:

After installing an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch, the additional step required to start the monitoring is to create an agent from the script. The agent is responsible for executing the script and collecting the monitoring data as defined by the script parameters.

1. Script Installation: Installing the script provides the logic and parameters for monitoring.

2. Agent Creation: Creating an agent from the script activates the monitoring process, allowing the NAE to begin tracking the specified function.

3. Operational Step: This step ensures that the monitoring logic is applied and the data collection starts as per the script's configuration.

Reference: Aruba AOS-CX documentation and Network Analytics Engine guides outline the process of script installation and the necessity of creating an agent to activate monitoring.

NEW QUESTION # 118

.....

If you fail HPE7-A02 exam with our HPE7-A02 exam dumps, we will full refund the cost that you purchased our HPE7-A02 exam dumps. However, our promise of "No help, full refund" doesn't shows our no confidence to our products; oppositely, it expresses our most sincere and responsible attitude to reassure our customers. With our professional HPE7-A02 Exam software, you will be at ease about your HPE7-A02 exam, and you will be satisfied with our after-sale service after you have purchased our HPE7-A02 exam software.
