First-grade Valid C_DBADM_2404 Cram Materials – Find Shortcut to Pass C_DBADM_2404 Exam

Consider sitting for an SAP Certified Associate - Database Administrator - SAP HANA exam and discovering that the practice materials you've been using are incorrect and useless. The technical staff at ActualVCE has gone through the SAP certification process and knows the need to be realistic and exact. Hundreds of professionals worldwide examine and test every SAP C_DBADM_2404 Practice Exam regularly. These practice tools are developed by professionals who work in fields impacting SAP SAP Certified Associate - Database Administrator - SAP HANA, giving them a foundation of knowledge and actual competence. Our SAP C_DBADM_2404 exam questions are created and curated by industry specialists.

SAP C_DBADM_2404 Exam Syllabus Topics:

Topic	Details

Topic 1	• Backup and Recovery: This topic discusses configuring and performing SAP HANA database system backups and restores.
Topic 2	• SAP HANA Architecture: In this topic, questions about describing SAP HANA database system architecture appear.
Topic 3	• Provisioning SAP HANA: This topic discusses how to accomplish sizing and provisioning tasks for different SAP HANA deployment options.

SAP Certified Associate - Database Administrator - SAP HANA Sample Questions (Q45-Q50):

NEW QUESTION # 45
Which system privilege must you have to restrict features for tenant databases in the SAP HANA cockpit?

- A. RESOURCE ADMIN
- B. INIFILE ADMIN
- C. DATABASE ADMIN
- D. SERVICE ADMIN

Answer: B

NEW QUESTION # 46
You want to change a standard user account into a restricted user account. Which attributes do you need to adjust?
Note: There are 3 correct answers to this question.

- A. Disable ODBC/JDBC Access must be set to "Yes".
- B. PUBLIC role must be set to "No".
- C. Creation of Objects in Own Schema must be set to "No".
- D. User Group must be set to "Restricted".
- E. Authorization method must be set to "LDAP".

Answer: A,B,C

Explanation:
Changing a standard user account to a restricted user account in SAP HANA involves modifying specific attributes to limit the user's capabilities and access within the database:
* Disable ODBC/JDBC Access must be set to "Yes" (A): This prevents the user from connecting to the database using ODBC or JDBC, which are common connectivity methods for external applications and development environments.
* Creation of Objects in Own Schema must be set to "No" (C): Restricted users should not have the privilege to create new objects in their schema, ensuring that their activities are limited to predefined tasks and roles.
* PUBLIC role must be set to "No" (E): Removing the PUBLIC role restricts the user from inheriting any privileges that are generally available to all database users, further limiting their access and capabilities. The options related to Authorization method being set to "LDAP" (B) and User Group must be set to "Restricted" (D) arenot directly related to changing the user account type in SAP HANA but pertain to different aspects of user authentication and group categorization.
References= The conversion between standard and restricted user types is detailed in the SAP HANA security and user administration documentation, highlighting the attribute adjustments necessary for enforcing stricter access controls.
User Management

NEW QUESTION # 47
Which user is automatically created when you add a data lake to an SAP HANA Cloud, SAP HANA database?

- A. DBA
- B. HDLADMIN
- C. DBADMIN
- D. SAPSA

Answer: B

NEW QUESTION # 48
Which data stores are activated by default when you provision an SAP HANA Cloud, SAP HANA database?
Note: There are 2 correct answers to this question.

- A. In-memory
- B. Native storage extension
- C. Hadoop distributed file system
- D. Data lake

Answer: A,B

Explanation:
Provisioning SAP HANA
The default activated data stores when provisioning an SAP HANA Cloud, SAP HANA database are:
* In-memory: The primary storage technology used by SAP HANA, where data is stored in RAM for high-speed access.
* Native storage extension: Provides the ability to manage large data volumes in a cost-efficient manner while keeping frequently accessed data in-memory.
References=SAP HANA Cloud documentation and provisioning guides typically include information on the storage

NEW QUESTION # 49
What options do you have when deploying an SAP HANA Cloud, SAP HANA database with an integrated data lake? Note: There are 2 correct answers to this question.

- A. Create an SAP HANA Cloud database with the data lake on premise.
- B. Create an SAP HANA Cloud database and include a data lake in one step.
- C. Create an SAP HANA Cloud database and later add a data lake.
- D. Create an SAP HANA Cloud database with a separate data lake.

Answer: B,C

NEW QUESTION # 50
......

Evaluate your own mistakes each time you attempt the desktop SAP Certified Associate - Database Administrator - SAP HANA (C_DBADM_2404) practice exam.
