

2Pass4sure Offers Three Formats of Updated Guidewire InsuranceSuite-Analyst Exam Questions

Guidewire InsuranceSuite-Analyst Fundamentals

Study online at https://iqidat.com/_j3738

- 1. What are the four main areas of configuration in a Guidewire application?:** -
User Interface
- Data Model
- Application Logic
- Integration
- 2. What are some of the technologies used in InsuranceSuite applications?:** - Page
Configuration Format (PCF) files
- Gosu (programming language)
- 3. What are some of the reasons for a non-developer to understand the technology stack?:** - To determine what data is stored and if new requirements need additional data elements
- To know how and where data is used
- To communicate what data may be needed beyond what is in the base configuration
- To determine valid values or circumstances for the new data
- 4. What are some examples of what can be configured in the User Interface?:** -
The order of fields, change labels regroup fields (simple change)
- Fields on a screen (moderate change)
- Screens (complex change)
- Screen-based logic (complex change)
- 5. What are some examples of what can be configured in the Data Model?:** -
Information that the base application does not store (add passport number)
- Values for a Typelist (add valid values for AddressType or PhoneType)
- Data to support regulatory requirements
- 6. What are the two main components of the data model:** - Entities
- Typelists
- 7. What is the purpose of the Data Dictionary:** It shows the data elements that belong to entities and typelists.
- 8. What are some of the relationships between entities:** - Foreign keys: a link to a single row in another entity
- Array keys: a link to multiple rows in another entity
- Type keys: a link to a specific value in a typelist

2Pass4sure is the leader in the latest Guidewire InsuranceSuite-Analyst Exam Certification and exam preparation provider. Our resources are constantly being revised and updated, with a close correlation. If you prepare Guidewire InsuranceSuite-Analyst certification, you will want to begin your training, so as to guarantee to pass your exam. As most of our exam questions are updated monthly, you will get the best resources with market-fresh quality and reliability assurance.

Never stop challenging your limitations. If you want to dig out your potentials, just keep trying. Repeated attempts will sharpen your minds. Maybe our InsuranceSuite-Analyst learning quiz is suitable for you. We strongly advise you to have a brave attempt. You will own a wonderful experience after you learning our InsuranceSuite-Analyst Guide practice. As the leader in this career, we have been considered as the most popular exam materials provider. And our InsuranceSuite-Analyst practice questions will bring you 100% success on your exam.

Valid InsuranceSuite-Analyst Study Materials | InsuranceSuite-Analyst Exam Dumps Collection

As long as you have a try on our products you will find that both the language and the content of our InsuranceSuite-Analyst practice braindumps are simple. The language of our InsuranceSuite-Analyst study materials is easy to be understood and suitable for any learners. The content emphasizes the focus and seizes the key to use refined InsuranceSuite-Analyst Exam Questions And Answers to let the learners master the most important information by using the least amount of them.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

The objectives of Elaboration sessions during Inception are to _____ and _____.

- A. demonstrate product features, update the backlog with new stories
- B. schedule work, define participants
- C. define detailed requirements, describe story details
- D. identify project resources, refine scope

Answer: A

Explanation:

In a Guidewire InsuranceSuite implementation, the Inception phase establishes the foundation for the entire project. One of the most important activities within this phase is conducting Elaboration sessions, which help ensure alignment between business stakeholders, analysts, and the delivery team. These sessions are intentionally designed to focus on understanding the solution through interaction with the product rather than exhaustive documentation.

The primary objectives of Elaboration sessions during Inception are to demonstrate product features and update the backlog with new stories, making Option A the correct answer. During these sessions, analysts and implementation teams showcase Guidewire out-of-the-box functionality to business users. This enables stakeholders to see how core processes, such as policy lifecycle, claims handling, or billing operations, are supported by InsuranceSuite. Visual demonstrations help validate assumptions, clarify expectations, and reduce misunderstandings early in the project.

As product features are demonstrated, stakeholders often identify new requirements, adjustments, or enhancements. These findings are captured as new user stories or refinements to existing backlog items.

The backlog evolves based on real system capabilities rather than theoretical requirements, ensuring it reflects business value and feasibility.

The other options do not align with the purpose of Elaboration sessions. Scheduling work and defining participants (Option B) are project management activities. Defining detailed requirements and story-level specifications (Option C) typically occurs during later iterations when development begins. Identifying project resources and refining scope (Option D) are broader inception planning activities, not the focus of elaboration.

Overall, Elaboration sessions during Inception support a Guidewire-recommended, iterative approach, emphasizing early validation, stakeholder engagement, and a well-informed backlog that drives successful project delivery.

NEW QUESTION # 35

Which resource provides specific guidance to Business Analysts on how to document User Story Cards?

- A. SurePath collateral - User Story Handbook
- B. Miro - Business Analyst Handbook
- C. SurePath collateral - User Story Guide
- D. Miro - User Story Job Aid

Answer: A

Explanation:

In Guidewire SurePath methodology, documenting high-quality User Story Cards is a critical responsibility of the Business Analyst. To support this, Guidewire provides standardized collateral that defines how stories should be written, structured, and refined to ensure consistency and clarity across implementations. The correct resource for this purpose is the SurePath collateral - User Story Handbook, making Option B the correct answer.

The User Story Handbook is specifically designed for Business Analysts working on Guidewire projects. It provides detailed guidance on how to document user stories, including recommended story formats, required elements, and examples aligned with Guidewire best practices. The handbook explains how to capture business intent, define scope boundaries, and write clear, testable acceptance criteria that support Agile delivery.

This resource also aligns user stories with Guidewire out-of-the-box (OOTB) functionality, helping analysts avoid unnecessary

customization and ensuring that requirements are value-driven. It supports consistency across teams by establishing a shared understanding of what constitutes a "ready" story before it enters development.

The other options are incorrect. Miro-based resources (Options A and D) may be used as collaboration or visualization tools but are not official Guidewire guidance for documenting user stories. The "User Story Guide" (Option C) is not the recognized SurePath resource; the User Story Handbook is the authoritative reference.

By using the SurePath User Story Handbook, Business Analysts ensure that stories are well-structured, aligned with Agile principles, and ready for elaboration, story huddles, and successful implementation within Guidewire InsuranceSuite.

NEW QUESTION # 36

Success factors for a cross-functional team are: (Choose two)

- A. Weekly status reports
- B. Empowered decision making
- C. Active business involvement
- D. Collaboration software

Answer: B,C

Explanation:

Cross-functional teams are central to successful Guidewire implementations, bringing together business, technical, and quality perspectives. Two of the most critical success factors are active business involvement and empowered decision making, making Options A and D correct.

Active business involvement (Option A) ensures that requirements, priorities, and decisions remain aligned with real business needs. When business stakeholders are consistently engaged, teams can quickly validate assumptions, clarify requirements, and make informed trade-offs during elaboration and development.

Empowered decision making (Option D) allows the team to move efficiently without excessive escalation.

When the team is trusted to make decisions within defined boundaries, delivery becomes faster and more predictable. This empowerment is a cornerstone of Agile and Guidewire SurePath practices.

The remaining options are supportive but not core success factors. Collaboration software (Option B) is a tool, not a driver of success. Weekly status reports (Option C) support communication but do not directly enable effective cross-functional collaboration.

NEW QUESTION # 37

A project team is tasked with implementing several common integration patterns for their new Guidewire Cloud application. They want to maximize efficiency and leverage existing Guidewire resources to provide a strong starting point for development efforts. Which resources should the team prioritize utilizing as pre-built starting points for these solutions?

- A. User Story Cards for requirements elaboration
- B. Application logic configuration files
- C. Accelerators
- D. Guidewire Cloud Standards for compliance
- E. RACI matrices for roles and responsibilities

Answer: C

Explanation:

When implementing common integration patterns in a Guidewire Cloud project, teams are encouraged to reuse proven assets rather than building solutions from scratch. The most appropriate pre-built starting points are Guidewire Accelerators, making Option E correct.

Accelerators are reusable tools, templates, utilities, and reference implementations provided through the Guidewire Marketplace or Professional Services. They are specifically designed to speed up implementation by addressing common needs such as integrations, data migration, configuration utilities, and testing support.

By using accelerators, teams reduce development effort, lower risk, and ensure alignment with Guidewire Cloud Standards and best practices. Accelerators also improve consistency across projects and help maintain upgradeability.

The other options do not serve as pre-built integration starting points. Cloud Standards (Option C) define compliance rules but do not provide solution assets. User Story Cards (Option D) capture requirements but do not accelerate development. RACI matrices (Option B) and configuration files (Option A) are not reusable integration solutions.

NEW QUESTION # 38

According to SurePath Best Practices, which of these are key activities in the Inception Phase of the project? (Select two)

- A. Estimate the Backlog
- B. Elaborate Requirements
- C. Benefit-mapping Workshop
- D. Foundational Configuration
- E. Build Solutions

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation (250-300 words):

The Inception Phase in Guidewire SurePath focuses on alignment, planning, and validation rather than building solutions.

A Benefit-mapping workshop (Option B) is used to align business objectives with expected outcomes and prioritize value delivery. Estimating the backlog (Option D) is another key activity, helping teams understand scope, effort, and feasibility early in the project.

Foundational configuration and solution building occur later, while requirement elaboration spans inception and iteration phases but is not the primary inception activity.

NEW QUESTION # 39

.....

2Pass4sure's InsuranceSuite-Analyst exam certification training materials are not only with high accuracy and wide coverage, but also with a reasonable price. After you buy our InsuranceSuite-Analyst certification exam training materials, we also provide one year free renewable service for you. We promise, when you buy the InsuranceSuite-Analyst Exam Certification training materials, if there are any quality problems or you fail InsuranceSuite-Analyst certification exam, we will give a full refund immediately.
