Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q31-Q36):

NEW QUESTION # 31
Which statement best describes the Digital Experience Monitor (DEM) feature on FortiSASE?

- A. It requires a separate DEM agent to be downloaded from the FortiSASE portal and installed on the endpoint.
- B. It can help IT and security teams ensure consistent security monitoring for remote users.
- C. It provides end-to-end network visibility from all the FortiSASE security PoPs to a specific SaaS application.
- D. It can be used to request a detailed analysis of the endpoint from the FortiGuard team.

Answer: C

Explanation:
The Digital Experience Monitor (DEM) feature in FortiSASE is designed to provide end-to-end network visibility by monitoring the performance and health of connections between FortiSASE security Points of Presence (PoPs) and specific SaaS applications. This ensures that administrators can identify and troubleshoot issues related to latency, jitter, packet loss, and other network performance metrics that could impact user experience when accessing cloud-based services.
Here's why the other options are incorrect:
B . It can be used to request a detailed analysis of the endpoint from the FortiGuard team: This is incorrect because DEM focuses on network performance monitoring, not endpoint analysis. Endpoint analysis would typically involve tools like FortiClient or FortiEDR, not DEM.
C . It requires a separate DEM agent to be downloaded from the FortiSASE portal and installed on the endpoint: This is incorrect because DEM operates at the network level and does not require an additional agent to be installed on endpoints.
D . It can help IT and security teams ensure consistent security monitoring for remote users: While DEM indirectly supports security by ensuring optimal network performance, its primary purpose is to monitor and improve the digital experience rather than enforce security policies.

NEW QUESTION # 33
Refer to the exhibit.
While reviewing the traffic logs, the FortiSASE administrator notices that the usernames are showing random characters.
Why are the usernames showing random characters?

- A. Users are using a shared single sign-on SSO username.

- B. Log anonymization is turned on to hash usernames.
- C. FortiSASE uses FortiClient unique identifiers for usernames.
- D. Special characters are used in usernames.

Answer: B

Explanation:
The usernames appear as random character strings because log anonymization is enabled in FortiSASE, which hashes sensitive user information such as usernames to protect privacy while still allowing log analysis.
