## C\_SIGDA\_2403 Exam Certification Cost - C\_SIGDA\_2403 Training Pdf

If you take a little snack, you will find that young people are now different. They made higher demands on themselves. This is a change in one's own mentality and it is also a requirement of the times! Whether you want it or not, you must start working hard! And our C\_SIGDA\_2403 exam materials may slightly reduce your stress. With our C\_SIGDA\_2403 study braidumps for 20 to 30 hours, we can proudly claim that you can pass the exam easily just as a piece of cake. And as long as you try our C\_SIGDA\_2403 practice questions, you will love it!

## SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q21-Q26):

### NEW QUESTION # 21

Which of the following areas are part of the lifecycle of a business process? Note: There are 3 correct answers to this question.

**Answer:**

Explanation:

A.C.D

### NEW QUESTION # 22

What is the benefit of an Event-based Gateway?

- A. It reacts immediately to external occasions when they occur.
- B. It allows tasks to be done simultaneously.
- **C. It ensures that all tasks have been completed.**
- D. It limits the outgoing conditions to a maximum of three.

**Answer: C**

### NEW QUESTION # 23

What are the main capabilities of Process Mining?

- A. Process Discovery, Process Conformance, Process Documentation
- **B. Process Discovery, Process Conformance, Process Performance**
- C. Process Performance, Process Improvement, Process Automation
- D. Process Conformance, Process Performance, Process Execution

**Answer: B**

Explanation:

Process Mining in SAP Signavio provides a set of core capabilities to analyze and optimize business processes based on event log data. The SAP Signavio documentation outlines these capabilities explicitly:

\* Exact Extract: "SAP Signavio Process Intelligence supports three main Process Mining capabilities:

\* Process Discovery: Automatically reconstructs process models from event logs to visualize the actual process flow.

\* Process Conformance: Compares actual process execution against a reference model (e.g., BPMN) to identify deviations and non-compliance.

\* Process Performance: Analyzes key performance indicators (KPIs) such as cycle time, cost, or bottlenecks to assess process efficiency." (SAP Signavio Process Intelligence Overview, section on "Core Capabilities of Process Mining").

\* Explanation:

\* Option B (Process Discovery, Process Conformance, Process Performance): This is correct as it matches the three primary capabilities of Process Mining in SAP Signavio. Process Discovery reveals the as-is process, Process Conformance ensures alignment with standards, and Process Performance evaluates efficiency metrics.

\* Option A (Process Discovery, Process Conformance, Process Documentation) is incorrect because Process Documentation is a feature of SAP Signavio Process Manager, not a core Process Mining capability.

\* Option C (Process Performance, Process Improvement, Process Automation) is incorrect as Process Improvement and Process Automation are outcomes or subsequent steps, not direct Process Mining capabilities.

\* Option D (Process Conformance, Process Performance, Process Execution) is incorrect because Process Execution is not a recognized Process Mining capability; it refers to process runtime, not analysis.

Reference: SAP Signavio Process Intelligence Overview, section on "Core Capabilities of Process Mining"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 5: Process Mining Features.

### NEW QUESTION # 24

What is the first step in starting an analysis in SAP Signavio Process Intelligence?
