## Salesforce Certified B2C Commerce Architect Sample Questions (Q66-Q71):

### NEW QUESTION # 66

A third party survey provider offers both an API endpoint for individual survey data and an SFTP server endpoint that can accept batch survey data. The initial implementation of the integration includes

1. Marking the order as requiring a survey before order placement
2. On the order confirmation page, the survey form is displayed for the customer to fill
3. The data is sent to the survey provider API, and the order is marked as not requiring a survey. Later it was identified that this solution is not fit for purpose as the following issues and additional requirements were identified:
  1. If the API call fails, the corresponding survey data is lost. The Business requires to avoid data loss.
  2. Some customers skipped the form. The Business require sending a survey email to such customers.
  3. The Order Management System (OMS) uses a non-standard XML parser and did not manage to parse orders with the survey, until

the survey attribute was manually removed from the xml.

How should the Architect address the issues and requirements described above?

- A. Create a custom session attribute when the survey is required. Send to the API endpoint in real-time. On failure, capture the survey data in the session and reprocess, use me session attribute to send emails for the cases when survey was skipped.
- B. Send the survey data to the API endpoint in real-time until the survey data is successfully captured.  
Instruct the OMS development team to update their XML parser, use the Order survey attribute to send emails for the cases when the survey was skipped.
- C. Create a custom object to store the survey data. Send to the API endpoint using a job. On success, remove the custom object. On failure, send the survey data with API from the next execution of the same job. Use the custom object to send emails for the cases when the survey was skipped.
- D. Create a custom object when the survey is required Send to the API endpoint in real-time. On success, remove the object. On failure, capture the survey data in the custom object and later reprocess with a job. Use the custom object to send emails for the cases when survey was skipped.

**Answer: A**

#### NEW QUESTION # 67

During the testing of the login form, QA finds out that the first time the user can log in, but every other login attempt from another computer leads to the homepage and the basket being emptied. Developers tried to debug the issue, but when they add a breakpoint to the login action, it is not hit by the debugger.

What should the Architect recommend developers to check?

- A. Add disable cache page in the template ISML - <iscache status="--off"/>.
- B. Check Login Form and any included templates for includes that enable page caching.
- C. Remove CSRF protection from Login Form Action.
- D. Add remote include for the login page

**Answer: B**

#### NEW QUESTION # 68

A developer is checking for Cross Site Scripting (XSS) and found that the quick search is not escaped (allows inclusion of Javascript) in the following script:

□ How would the developer resolve this issue?

- A. Use <toprint value="\${searchPhrase}" />
- B. Replace ' with double Quote\*
- C. Use <isprint value='\${searchPhrase}' encoding='jsblock' />
- D. Use <isprint value="\${searchPhrase}" encoding='jshtm' />

**Answer: C**

#### NEW QUESTION # 69

Given the SFRA Controller below:

□ Why would a JavaScript debugger, that is stopped at line 06, fail to show the viewdata variable in the inspection tool?

- A. viewdata is assigned but not declared.
- B. viewdata is a B2C Script reserved name.
- C. cache. applyDefaultCache is not a valid middleware.
- D. viewdata is declared but not assigned.

**Answer: A**

#### NEW QUESTION # 70

The client provided these business requirements:

\* The B2C Commerce platform will integrate with the Client's Order Management System (OMS).

\* The OMS supports Integration using REST services.

\* The OMS is hosted on the Clients infrastructure.

What configurations are needed for this integration with the OMS?

- A service configuration, a service profile configuration, and a user credential configuration.
- B. A service configuration, a hostname alias configuration, and a user credential configuration.
- C. A service profile configuration, a WAF configuration, and a service credential configuration.
- D. A service configuration, a service profile configuration, and a service credential configuration.

**Answer: D**

Explanation:

For integrating the B2C Commerce platform with the client's OMS using REST services, the required configurations include:

Service Configuration: This specifies the service endpoints, HTTP methods, and any other service-specific settings necessary for the integration.

Service Profile Configuration: This defines the behavior of the service such as timeout settings, retry logic, and cache settings.

Service Credential Configuration: This involves setting up the credentials that will be used to authenticate the requests to the client's OMS. These credentials are often managed securely through encrypted storage and retrieval mechanisms.

These configurations ensure secure, efficient, and reliable communication between the B2C Commerce platform and the client's OMS, adhering to best practices in web service integration.
