## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q354-Q359):

### NEW QUESTION # 354

Which of the following best defines a vulnerability assessment in the context of cybersecurity?

- A. A process that identifies potential cybersecurity threats in an organization.
- B. A process that mitigates the impact of cybersecurity incidents on an organization.
- **C. A process that identifies potential security flaws or weaknesses in a system.**
- D. A process that determines the level of risk associated with a cybersecurity incident.

**Answer: C**

**Explanation:**

A vulnerability assessment is a systematic process that identifies potential security flaws or weaknesses in a system, network, or

application. It focuses on identifying vulnerabilities that could be exploited by attackers. It involves scanning and testing for known vulnerabilities and vulnerabilities resulting from misconfigurations or poor security practices. The assessment provides valuable information for organizations to prioritize their efforts in remediating identified vulnerabilities and improving their overall security posture.

#### NEW QUESTION # 355

Which of the following best describes an incident handler's primary responsibility during the incident handling process?

- A. Assessing the root cause of the incident
- B. Implementing preventive measures to avoid future incidents
- C. Collecting evidence to support legal actions
- D. Restoring affected systems to their normal operations

**Answer: D**

Explanation:

The primary responsibility of an incident handler during the incident handling process is to restore affected systems to their normal operations. While collecting evidence, assessing the root cause, and implementing preventive measures are also important tasks, the immediate focus should be on reducing the impact of the incident and restoring normal functionality to minimize downtime and disruption.

#### NEW QUESTION # 356

What is smishing?

- A. A physical attack where an unauthorized person gains entry to a restricted area by following closely behind an authorized person.
- B. A form of social engineering attack that uses SMS or text messages to trick victims into revealing sensitive information.
- C. A cyber attack where an attacker manipulates and deceives an individual to reveal sensitive information.
- D. A type of phishing attack that targets specific individuals or organizations.

**Answer: B**

Explanation:

Smishing, short for SMS phishing, is a social engineering attack that utilizes SMS or text messages to deceive individuals into disclosing sensitive information or performing certain actions. These messages often mimic legitimate sources, such as banks or service providers, and typically contain links or phone numbers that, when accessed or called, lead to malicious activities. Smishing takes advantage of the ubiquity of mobile devices and users' tendency to trust text messages.

#### NEW QUESTION # 357

What is the purpose of app distribution in cybersecurity?

- A. Configuring access control policies
- B. Testing the security of applications
- C. Deploying network firewalls
- D. Distributing security patches and updates

**Answer: D**

Explanation:

App distribution in cybersecurity refers to the process of distributing security patches and updates for applications. This is vital in maintaining the security of software and preventing vulnerabilities from being exploited. By regularly distributing and installing updates, organizations can address known security flaws, improve application performance, and ensure that their systems remain protected against emerging threats.

#### NEW QUESTION # 358

Which command-line tool is used to query DNS records and obtain information about domain names?

- A. traceroute
- B. tcpdump
- C. netstat
- D. nslookup

**Answer: D**

Explanation:

The correct command-line tool for querying DNS records and obtaining information about domain names is nslookup. It can be used to check the security assessment information related to DNS configurations, verify the correct mapping of domain names to IP addresses, and troubleshoot any DNS-related issues.

## NEW QUESTION # 359
