**Answer: B**

### **NEW QUESTION # 163**

A company is planning to deploy a new cloud management solution that will allow business users to deploy servers via a self-service portal.

After the initial discovery workshop with the new service owner, the architect has gained the following key information about the project:

- In an effort to increase user experience, the IT Manager has requested that all deployments do not rely on manual approvals.
- The current IT team is made up of five engineers but only one engineer has any experience writing scripts or automating server deployments.
- The current version of the CMDB solution has no API available to create or destroy configuration items (CI) and there is no budget for upgrades.

- Currently all CMDB activities are completed manually via service request with an SLA of 4 hours.
- The customer has one data center with a requirement of protection against data center failure.
- The expected availability SLA (measured monthly) will be 99.5%.
- The deployment of a server is expected to take no longer than 2 hours.

Given the information provided, which two risks should the architect document within the design?  
(Choose two.)

- A. The customer only has a single data center location.
- **B. The end to end server deployment cannot be achieved in the time window.**
