

New NCP-CI-Azure Exam Fee & NCP-CI-Azure Dump Torrent

What's more, part of that BraindumpsPrep NCP-CI-Azure dumps now are free: <https://drive.google.com/open?id=1oJ6i09JjETAnAHGHUMLN9crJUDUDv-S>

You will identify both your strengths and shortcomings when you utilize Nutanix NCP-CI-Azure practice exam software. You will also face your doubts and apprehensions related to the Nutanix NCP-CI-Azure exam. Our Nutanix NCP-CI-Azure practice test software is the most distinguished source for the Nutanix NCP-CI-Azure Exam all over the world because it facilitates your practice in the practical form of the Nutanix NCP-CI-Azure certification exam.

Nutanix NCP-CI-Azure Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing an NC2 on Azure Environment: This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.
Topic 2	<ul style="list-style-type: none">Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.
Topic 3	<ul style="list-style-type: none">Planning an NC2 on Azure Deployment: This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.

Topic 4	<ul style="list-style-type: none"> • Configuring an NC2 on Azure Environment: This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.

NCP-CI-Azure Dump Torrent - NCP-CI-Azure Reliable Learning Materials

Improving your efficiency and saving your time has always been the goal of our NCP-CI-Azure preparation exam. If you are willing to try our NCP-CI-Azure study materials, we believe you will not regret your choice. With our NCP-CI-Azure Practice Engine for 20 to 30 hours, we can claim that you will be quite confident to attend you exam and pass it for sure for we have high pass rate as 98% to 100% which is unmatched in the market.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q42-Q47):

NEW QUESTION # 42

A company wants to start using Nutanix Cloud Clusters (NC2) in Azure. The company has large spend commitments as part of a Microsoft Azure Consumption Commitment (MACC) totaling \$15 million.

What approach should the administrator take to ensure the Nutanix licensing costs apply to the MACC?

- A. Leverage existing Nutanix licenses
- B. Purchase Nutanix licenses directly from Nutanix and contact Microsoft support.
- **C. Purchase Nutanix licenses through the Azure Marketplace.**
- D. Request a trial directly from Nutanix.

Answer: C

Explanation:

* Microsoft Azure Consumption Commitment (MACC): To ensure that the Nutanix licensing costs apply to the MACC, the company needs to make purchases that are recognized by Azure's billing system.

* Azure Marketplace Purchases: By purchasing Nutanix licenses through the Azure Marketplace, the costs will be included in the Azure billing and count towards the MACC, thereby leveraging the committed spend.

NEW QUESTION # 43

Which action should the administrator take to troubleshoot the error shown in the exhibit?

- **A. Check the Azure AD App registration Client Secret.**
- B. Check the Azure subnet delegation status.
- C. Check the NC2 organization permissions.
- D. Check the PC VNet is peered correctly.

Answer: A

Explanation:

To troubleshoot the error shown in the exhibit where Azure credentials are not valid and the creation of the resource group failed, the administrator should:

* Verify that the Azure AD App registration has been correctly configured, especially the Client Secret.

* Ensure that the Client Secret is valid, has not expired, and matches what has been entered in the configuration.

This step is crucial because an invalid or expired Client Secret would prevent the validation of Azure credentials and the creation of necessary resources.

- * Azure AD App Registration and Secrets Management
- * Nutanix Cluster Configuration Documentation

NEW QUESTION # 44

An organization want to use existing Azure resources to deploy NC2.
What is a valid requirement to use existing Azure resources for this task?

- A. More than two DNS servers must be used.
- **B. The fastpathenabled tag must be added after creating a NAT gateway.**
- C. Azure NAT gateway must be attached to the cluster management, Prism Central, and external Flow Gateway subnets.
- D. A new Azure resource group must be created where all resources, such as VNets must be created.

Answer: B

Explanation:

Resource Group Requirement: When deploying NC2 on Azure, it is essential to organize resources such as VNets, subnets, and other components in a dedicated resource group. This helps in managing and maintaining the resources efficiently.

New Resource Group: Creating a new Azure resource group ensures that all the necessary NC2 resources are isolated and managed together, avoiding conflicts with existing resources and providing a clear separation for administration and billing purposes.

NEW QUESTION # 45

An administrator must ensure that certain NC2 VMs can access Azure resources. The NC2 VM traffic must not traverse the internet.

How would the administrator achieve this?

- A. By creating an Azure Private Endpoint for VMs in the host-mgmt subnet.
- B. By creating an Azure Private Endpoint for VMs in a NAT network via vWAN.
- **C. By creating an Azure Private Endpoint for VMs in a Delegated Subnet**
- D. By creating an Azure Private Endpoint for VMs in a No-NAT network via vWAN.

Answer: C

Explanation:

Azure Private Endpoint: A Private Endpoint provides secure connectivity to Azure resources by enabling private access through the Azure backbone network. This ensures that the traffic does not traverse the internet, providing enhanced security and performance.

Delegated Subnet: By creating an Azure Private Endpoint for VMs in a delegated subnet, the administrator ensures that the VMs can access Azure resources directly and securely without using the public internet.

NEW QUESTION # 46

An administrator is deploying an NC2 cluster in Azure and observes on NC2 console that nodes will not progress and continue in a Booting state.

What is the most likely cause for the node not continuing to deploy?

- A. The Azure account does not have an active subscription.
- B. A private DNS server is being used that is not reachable.
- C. An Azure Support case must first be submitted for allowlisting the Azure subscription.
- **D. The subscription has not been validated to be allowlisted by Microsoft.**

Answer: D

Explanation:

* Azure Subscription Validation: When deploying an NC2 cluster, the Azure subscription must be validated and allowlisted by
