SAP Certified Associate - Security Administrator Sample Questions (Q67-Q72):

NEW QUESTION # 67
Which of the following services does the Identity Authentication Service provide? Note: There are 2 correct answers to this question.

- A. Policy refinement
- B. Single Sign-On
- C. Central User Repository
- D. Authentication

Answer: B,D

Explanation:
The SAP Identity Authentication Service provides Authentication and Single Sign-On (SSO) services.
Authentication verifies user identities by validating credentials, such as usernames and passwords, or integrating with external identity providers, ensuring secure access to SAP cloud applications. Single Sign-On enables users to access multiple SAP and non-SAP systems with a single set of credentials, streamlining user experience and reducing authentication overhead while maintaining security. These services are core to the Identity Authentication Service's role in SAP's cloud ecosystem, supporting secure and efficient access management. Policy refinement is not a function of this service, as it focuses on policy enforcement rather than creation. A Central User Repository is typically managed by other systems, like SAP Cloud Identity Services, not the Identity Authentication Service. By offering Authentication and SSO, the service ensures robust identity verification and seamless access across cloud-based SAP solutions, aligning with modern security standards and enhancing user productivity.

NEW QUESTION # 70
Which of the following functions within SAP GRC Access Control support access certification and review?
Note: There are 2 correct answers to this question.

- A. Role Reaffirm
- B. SOD Review
- C. Role Review
- D. User Reaffirm

Answer: B,D

Explanation:
In SAP GRC Access Control, the functions that support access certification and review are SOD Review and User Reaffirm. SOD (Segregation of Duties) Review enables organizations to analyze roles and user assignments for potential conflicts, ensuring that access does not violate SoD policies. This review process involves certifying that roles or users do not have conflicting permissions, supporting compliance with security standards. User Reaffirm is used to periodically certify user access, requiring managers or administrators to confirm that users' assigned roles and permissions remain appropriate for their job functions. This reaffirmation process is critical for access governance, ensuring ongoing compliance and security. Role Review, while related to role maintenance, is not a specific GRC function for access certification, and Role Reaffirm is not a standard term in SAP GRC. By leveraging SOD Review and User Reaffirm, SAP GRC Access Control provides robust tools for maintaining secure and compliant access management, addressing both role-based and user-based risks.
