NEW QUESTION # 42

A Platform Engineer is preparing to deploy an NKP cluster in an air-gapped environment.

The NKP cluster will be deployed on Nutanix infrastructure using the CAPI Nutanix provisioner (CAPX).

The engineer has decided to create the bootstrap cluster first, then NIB-prepare an Ubuntu 22.04 OS image that the Linux engineering team has provided in Prism Central.

After that, the engineer will deploy the NKP cluster. However, during the first step of creating a bootstrap cluster, the engineer received the error shown in the exhibit.

What could be the reason?

Refer to the exhibit.

```
bovan@laptop-GRMCY8R:~/nkp-v2.12.9/cli$ ./nkp create bootstrap
/ Creating a bootstrap cluster
Failed to create bootstrap cluster: failed to pull image "mesosphere/kommanderdata/ubuntu-22.04": command "docker pull mesosphere/kommanderdata/ubuntu-22.04" failed with error: exit status 1
bovan@laptop-GRMCY8R:~/nkp-v2.12.9/cli$ |
```

- A. The CAPI provisioning method needs to be specified as part of the command `nkp create bootstrap nutanix`.

- B. The Ubuntu 22.04 OS image needs to be NIB-prepped prior to creating the bootstrap.
- C. The nkp create bootstrap command needs to be executed as root.
- D. The bootstrap cluster image needs to be loaded prior to creating the bootstrap cluster.

- A. Execute `nkp install kommander --init` to an output file. Disable Velero in the output file and set the custom specs for the components to be modified. Deploy the NKP applications using the `nkp install kommander` command, specifying the output file.
- B. Execute `nkp config kommander --init` to an output file. Disable Velero in the output file and set the custom specs for the components to be modified. Deploy the applications using the `helm install` command, specifying the output file.
- C. Execute `nkp install kommander --init` to an output file. Set the custom specs for the components to be modified in the output file.
