There are many advantages of our Cisco 300-710 pdf torrent: latest real questions, accurate answers, instantly download and high passing rate. You can totally trust our Cisco 300-710 Practice Test because all questions are created based on the requirements of the certification center.

Cisco 300-710 exam is designed for professionals who are interested in validating their knowledge and skills in securing networks with Cisco Firepower. Securing Networks with Cisco Firepower certification exam is part of the Cisco Certified Network Professional (CCNP) Security certification track and is intended for professionals who are responsible for configuring, deploying, and managing Cisco Firepower solutions. 300-710 Exam measures the candidate's ability to use Cisco Firepower Next-Generation Firewall (NGFW), Cisco Firepower Management Center (FMC), and Cisco Firepower Threat Defense (FTD) to secure networks.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q190-Q195):

NEW QUESTION # 190

An engineer is configuring two new Cisco Secure Firewall Threat Defense devices to replace the existing firewalls. Network traffic must be analyzed for intrusion events without impacting the traffic. What must the engineer implement next to accomplish the goal?

- A. ERSPAN Passive mode
- B. Inline Pair mode
- C. Passive mode
- D. Inline Pair in Tap mode

Answer: C

Explanation:

Passive mode allows the Cisco Secure Firewall Threat Defense device to analyze traffic for intrusion events without impacting or altering the traffic flow. This is ideal for monitoring environments where traffic inspection is needed but enforcement is not required.

NEW QUESTION # 191

Which two features can be used with Cisco Secure Firewall Threat Defense remote access VPN?

(Choose two.)

- A. support for Cisco Secure Firewall 4100 Series in cluster mode
- B. use of license utilization for zero-touch network deployment
- C. SSL remote access VPN supports port sharing with other Cisco FTD features using SSL port 443
- **D. support for Rapid Threat Containment using RADIUS dynamic authorization**
- **E. enable Duo two-factor authentication using LDAPS**

Answer: D,E

Explanation:

Cisco Secure Firewall Threat Defense supports integration with external authentication servers, including LDAP and RADIUS, which can be used to enable two-factor authentication solutions such as Duo for enhanced security during VPN login. FTD remote access VPN supports Rapid Threat Containment features by leveraging RADIUS Change of Authorization (CoA) or dynamic authorization to quickly isolate or remediate compromised VPN clients.

NEW QUESTION # 193

An administrator configures the interfaces of a Cisco Secure Firewall Threat Defense device in an inline IPS deployment. The administrator completes these actions:

- * identifies the device and the interfaces
- * sets the interface mode to inline
- * enables the interfaces

Which configuration step must the administrator take next to complete the implementation?

- A. Set the interface to Transparent mode.
- B. Set the interface to routed mode.
- **C. Configure an inline set**
- D. Enable spanning-tree PortFast on the interfaces.

Answer: C

Explanation:

After setting the interface mode to inline and enabling the interfaces on a Cisco Secure Firewall Threat Defense (FTD) device in an inline IPS deployment, the next step is to configure an inline set. An inline set groups two interfaces that work together to inspect traffic passing between them.

Steps to configure an inline set:

- * In FMC, navigate to Devices > Device Management.
- * Select the FTD device and configure the interfaces.
- * Create a new inline set, adding the relevant interfaces that have been set to inline mode.
- * Deploy the configuration to the FTD device.

Configuring an inline set ensures that the traffic between the specified interfaces is inspected and processed according to the IPS policies, completing the implementation of the inline IPS deployment.
