## 有效的考試認證資料Microsoft AZ-800在線題庫是由Microsoft公司專業認證培訓師認真研發的

想更快的通過AZ-800認證考試嗎？快速拿到該證書嗎？PDFExamDumps考古題可以幫助您，幾乎包含了AZ-800考試所有知識點，由專業的認證專家團隊提供100%正確的答案。他們一直致力於為考生提供最好的學習資料，以確保您獲得的是最有價值的Microsoft AZ-800考古題。我們不斷的更新AZ-800考題資料，以保證其高通過率，是大家值得選擇的最新、最準確的Microsoft AZ-800學習資料產品。

為了準備AZ-800考試，候選人應該對Windows Server管理、虛擬化技術和混合雲環境有著深入的理解。他們還應該具有與Microsoft Azure一起工作的經驗，並熟悉實施安全控制和合規性政策。該考試由多個選擇題、場景題和基於表現的任務組成，要求候選人展示其在管理Windows Server基礎架構方面的實踐技能。通過AZ-800考試驗證候選人在管理Windows Server混合核心基礎架構方面的熟練程度，並使他們有資格獲得Microsoft Certified: Azure Stack HCI Administrator Associate認證。

## 最新的 Windows Server AZ-800 免費考試真題 (Q231-Q236):

問題 #231

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. Group writeback is enabled in Azure AD Connect.

The AD DS domain contains a server named Server1. Server1 contains a shared folder named share1.

You have an Azure Storage account named storage2 that uses Azure AD-based access control.

The storage2 account contains a share named share2.

You need to create a security group that meets the following requirements:

- Can contain users from the AD DS domain
- Can be used to authorize user access to share1 and share2

What should you do?

- A. in the Azure AD Tenant create a security group that has dynamic membership.
- B. in the Azure AD tenant create a Microsoft 365 group
- **C. in the Azure AD tenant create a security group that has assigned membership**
- D. in the AD DS domain, create a universal security group

答案: C

解題說明:

Group Writeback is enabled so it can access Azure File Share and on-prem share with Azure AD group.

#### 問題 #232

You have on-premises file servers that run Windows Server as shown in the following table.

| Name    | Relevant folder        |
|---------|------------------------|
| Server1 | D:\Folder1, E:\Folder2 |
| Server2 | D:\Data                |

You have the Azure file shares shown in the following table.

| Name   | Location |
|--------|----------|
| share1 | East US  |
| share2 | East US  |

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.

You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

| Statements                                                          | Yes                   | No                    |
|---------------------------------------------------------------------|-----------------------|-----------------------|
| You can add share2 as a cloud endpoint in Group1.                   | <input type="radio"/> | <input type="radio"/> |
| You can add E:\Folder2 from Server1 as a server endpoint in Group1. | <input type="radio"/> | <input type="radio"/> |
| You can add D:\Data from Server2 as a server endpoint in Group1.    | <input type="radio"/> | <input type="radio"/> |

答案:

解題說明:

## Statements

Yes

No

You can add share2 as a cloud endpoint in Group1.

☐☒

You can add E:\Folder2 from Server1 as a server endpoint in Group1.

☒☐

You can add D:\Data from Server2 as a server endpoint in Group1.

☒☐

Reference:

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning>

## 問題 #233

### SIMULATION

You need to ensure that you can manage SRV1 remotely by using PowerShell.  
To complete this task, sign in to the required computer or computers.

答案:

解題說明:

Configure remote Management in Server Manager

To enable Server Manager remote management by using the Windows interface Step 1: On the computer that you want to manage remotely, open Server Manager, if it is not already open. On the Windows taskbar, click Server Manager. On the start screen, click the Server Manager tile.

Step 2: In the Properties area of the Local Servers page, click the hyperlinked value for the remote management property.

Step 3: Do one of the following, and then click OK.

To let this computer be managed remotely by using Server Manager or Windows PowerShell, select Enable remote management of this server from other computers.

(To prevent this computer from being managed remotely by using Server Manager (or Windows PowerShell if it is installed), clear the Enable remote management of this server from other computers check box.) Reference:

<https://learn.microsoft.com/en-us/windows-server/administration/server-manager/configure-remote-management-in-server-manager>

## 問題 #234

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

| Name | IP address    |
|------|---------------|
| VPN1 | 172.16.0.254  |
| VPN2 | 131.10.15.254 |
| VPN3 | 172.16.1.254  |

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

|                       |                   |
|-----------------------|-------------------|
| Name                  | : NPSclient1      |
| Address               | : 172.16.0.254    |
| AuthAttributeRequired | : False           |
| SharedSecret          | : Pa55w.rd        |
| VendorName            | : RADIUS Standard |
| Enabled               | : False           |
| Name                  | : NPSclient2      |
| Address               | : 131.10.15.254   |
| AuthAttributeRequired | : False           |
| SharedSecret          | : Pa55w.rd        |
| VendorName            | : RADIUS Standard |
| Enabled               | : True            |
| Name                  | : NPSclient3      |
| Address               | : 172.16.1.254    |
| AuthAttributeRequired | : False           |
| SharedSecret          | : Pa55w.rd        |
| VendorName            | : RADIUS Standard |
| Enabled               | : True            |

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

| Statements                                                                                        | Yes                   | No                    |
|---------------------------------------------------------------------------------------------------|-----------------------|-----------------------|
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1. | <input type="radio"/> | <input type="radio"/> |
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2. | <input type="radio"/> | <input type="radio"/> |
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3. | <input type="radio"/> | <input type="radio"/> |

答案:

解題說明:

**Answer Area**

| Statements                                                                                        | Yes                              | No                               |
|---------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1. | <input type="radio"/>            | <input checked="" type="radio"/> |
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2. | <input checked="" type="radio"/> | <input type="radio"/>            |
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3. | <input type="radio"/>            | <input checked="" type="radio"/> |

### 問題 #235

You have an onpremises DNS server named Server1 that runs Windows Server. Server 1 hosts a DNS zone named fabrikam.com. You have an Azure subscription that contains the resources shown in the following table.

| Name        | Type             | Description                                                                |
|-------------|------------------|----------------------------------------------------------------------------|
| Vnet1       | Virtual network  | Connects to the on-premises network by using a Site-to-Site VPN            |
| VM1         | Virtual machine  | Runs Windows Server and has the DNS Server role installed                  |
| contoso.com | Private DNS zone | Linked to Vnet1                                                            |
| contoso.com | Public DNS zone  | Contains the DNS records of all the platform as a service (PaaS) resources |

**Answer Area**

On Vnet1:

- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

答案:

解題說明:

**Answer Area**

On Vnet1:

- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.
