Practice AZ-120 Exam Fee & New AZ-120 Exam Format

We offer you free update for one year after you purchase AZ-120 study guide from us, namely, in the following year, you can get the update version for free. And our system will automatically send the latest version to your email address. Moreover, AZ-120 exam dumps of us are compiled by experienced experts of the field, and they are quite familiar with dynamics of the exam center, therefore the quality and accuracy of the AZ-120 Study Guide can be guaranteed. You just need to choose us, and we will help you pass the exam successfully.

Microsoft Azure has become one of the most popular cloud computing platforms available today. It is fast, reliable, and highly scalable, which makes it an ideal choice for businesses looking to host their applications and services in the cloud. However, deploying and managing enterprise-level applications like SAP workloads on Azure requires specialized skills and knowledge. To address this need, Microsoft has introduced the AZ-120 Exam, which is designed to test the skills and knowledge required to plan and administer SAP workloads on Azure.

Planning and Administering Microsoft Azure for SAP Workloads Valid Exam Reference & AZ-120 Free Training Pdf & Planning and Administering Microsoft Azure for SAP Workloads Latest Practice Questions

Fortunately, there's no need to worry anymore. Now you can access and analyze your AZ-120 exam dumps by using the resourceful and well-researched Planning and Administering Microsoft Azure for SAP Workloads exam questions that is available only on ExamTorrent. This easy-to-use AZ-120 practice material encompasses the whole syllabus and its users find it very competitive as its Real AZ-120 Questions are specially ExamTorrent in this field. Each candidate has a different style of learning and preparation. They find it beneficial to pursue their desired study pattern for improved results.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q65-Q70):

NEW QUESTION # 65
You plan to migrate an SAP environment to Azure.
You need to design an Azure network infrastructure to meet the following requirements:
* Prevent end users from accessing the database servers.
* Isolate the application servers from the database servers.
* Ensure that end users can access the SAP systems over the Internet.
* Minimize the costs associated to the communications between the application servers and database servers.
Which two actions should you include in the solution? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. Create a site-to-site VPN between the on-premises network and Azure.
- B. Segregate the SAP application servers and database servers by using Azure virtual networks.
- C. Configure Azure Traffic Manager to route incoming connections.
- D. In the same Azure virtual network, segregate the SAP application servers and database servers by using different subnets and network security groups.
- E. Configure an internal Azure Standard Load Balancer for incoming connections.

Answer: A,D

NEW QUESTION # 66
You plan to deploy an SAP landscape that will have virtual machines deployed to multiple Azure regions.
You need to ensure that the virtual machines can communicate across the regions.
What should you configure?

- A. virtual network peering in Azure
- B. local network gateways
- C. Azure Bastion hosts
- D. Azure Relay

Answer: A

Explanation:
Depending on the rules and restrictions you want to apply between the different virtual networks hosting VMs of different SAP systems, you should peer those virtual network Note: Virtual network peering enables you to seamlessly connect two or more Virtual Networks in Azure. The virtual networks appear as one for connectivity purposes. The traffic between virtual machines in peered virtual networks uses the Microsoft backbone infrastructure. Like traffic between virtual machines in the same network, traffic is routed through Microsoft's private network only.
Azure supports the following types of peering:
Virtual network peering: Connect virtual networks within the same Azure region.
Global virtual network peering: Connecting virtual networks across Azure regions.

NEW QUESTION # 67
You need to connect SAP HANA on Azure (Large Instances) to an Azure Log Analytics workspace.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Answer Area

Configure a Log Analytics....
Install the log....

1 - Configure a Log Analytics....
2 - Install the log....

NEW QUESTION # 68

You have an Azure AD tenant named contoso.com that syncs to an Active Directory domain hosted on an Azure virtual machine.

You plan to deploy an SAP NetWeaver landscape on Azure that will use SUSE Linux Enterprise Server (SLES).

You need to recommend an authentication solution for the following, scenarios. The solution must support Azure Multi-Factor Authentication (MFA);

* Administrators sign in to SLES Azure virtual machines.
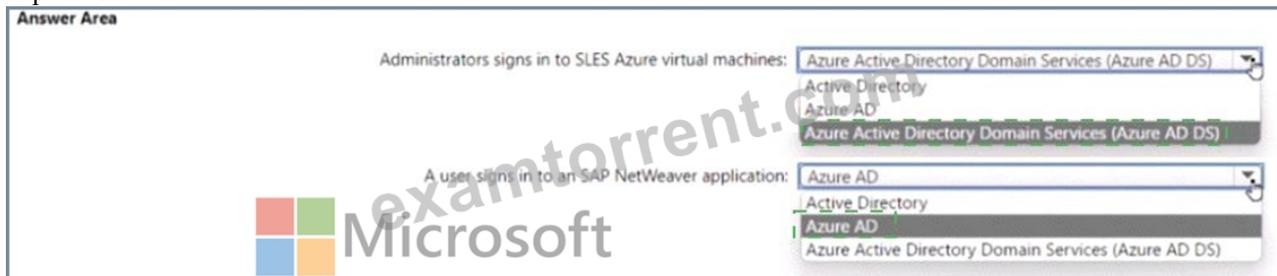

* A user signs in to an SAP NetWeaver application.

What should you recommend for each scenario? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Administrators signs in to SLES Azure virtual machines: Azure Active Directory Domain Services (Azure AD DS)
 Active Directory
 Azure AD
 Azure Active Directory Domain Services (Azure AD DS)

A user signs in to an SAP NetWeaver application: Azure AD
 Active Directory
 Azure AD
 Azure Active Directory Domain Services (Azure AD DS)

Answer:

Explanation:

Answer Area

Administrators signs in to SLES Azure virtual machines: Azure Active Directory Domain Services (Azure AD DS)
 Active Directory
 Azure AD
 Azure Active Directory Domain Services (Azure AD DS)

A user signs in to an SAP NetWeaver application: Azure AD
 Active Directory
 Azure AD
 Azure Active Directory Domain Services (Azure AD DS)

Explanation

Answer Area

Administrators signs in to SLES Azure virtual machines: Azure Active Directory Domain Services (Azure AD DS)

A user signs in to an SAP NetWeaver application: Azure AD

NEW QUESTION # 69

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
The Azure Enhanced Monitoring Extension for SAP stores performance data in an Azure Storage account.	○	○
You can enable the Azure Enhanced Monitoring Extension for SAP on a SUSE Linux Enterprise Server 12 (SLES 12) server by running the Set-AzVMAEMExtension cmdlet.	○	○
You can enable the Azure Enhanced Monitoring Extension for SAP on a server that runs Windows Server 2016 by running the Set-AzVMAEMExtension cmdlet.	○	○

Answer:

Explanation:

Statements	Yes	No
The Azure Enhanced Monitoring Extension for SAP stores performance data in an Azure Storage account.	☑	○
You can enable the Azure Enhanced Monitoring Extension for SAP on a SUSE Linux Enterprise Server 12 (SLES 12) server by running the Set-AzVMAEMExtension cmdlet.	☑	○
You can enable the Azure Enhanced Monitoring Extension for SAP on a server that runs Windows Server 2016 by running the Set-AzVMAEMExtension cmdlet.	☑	○
