CompTIA Security+ Certification Exam Sample Questions (Q366-Q371):

NEW QUESTION # 366
Which of the following are common VoIP-associated vulnerabilities? (Choose two).

- A. VLAN hopping
- B. Tailgating
- C. DHCP snooping
- D. SPIM
- E. Vishing
- F. Phishing

Answer: D,E

Explanation:
SPIM (Spam over Internet Messaging) poses a threat to VoIP systems by consuming bandwidth, diverting resources, and potentially causing denial of service attacks. The influx of SPIM messages can degrade the quality of VoIP calls, overload servers, and serve as a platform for social engineering attacks, jeopardizing the security of VoIP users. To mitigate these risks, organizations should implement spam filters, intrusion detection systems, and regular software updates while also educating users to recognize and avoid potential threats associated with SPIM.

NEW QUESTION # 367
Which security controls is a company implementing by deploying HIPS? (Select two)

- A. Physical
- B. Preventive
- C. Detective
- D. Directive
- E. Corrective
- F. Compensating

Answer: B,C

Explanation:
A Host-Based Intrusion Prevention System (HIPS) provides preventive and detective security controls.
Security+ SY0-701 explains that:
* As a preventive control (B), HIPS actively blocks malicious behavior, stops unauthorized changes, prevents exploit execution, and enforces host-level protection. It prevents malware, intrusions, and unauthorized actions before they occur.

* As a detective control (F), HIPS monitors host activity, detects suspicious patterns, logs events, and alerts administrators when threats are observed.
Directive controls (A) involve policy, not technical tools. Physical controls (C) include barriers and locks.
Corrective controls (D) restore systems after incidents. Compensating controls (E) are alternatives when primary controls aren't available.
Therefore, the correct answers are B (Preventive) and F (Detective).

NEW QUESTION # 368
Which of the following control types involves restricting IP connectivity to a router's web management interface to protect it from being exploited by a vulnerability?

- A. Managerial
- B. Physical
- C. Preventive
- D. Corrective

Answer: C

Explanation:
Restricting access to a router's web management interface is apreventive control (C). This type of control is implementedbefore a threat occursto reduce the likelihood of exploitation.
CompTIA Security+ SY0-701listspreventive controlssuch asIP whitelisting, ACLs, and firewallsunder Domain 1.4: Security controls.

NEW QUESTION # 369
A penetration test identifies that an SMBv1 is enabled on multiple servers across an organization.
The organization wants to remediate this vulnerability in the most efficient way possible. Which of the following should the organization use for this purpose?

- A. DLP
- B. SFTP
- C. ACL
- D. GPO

Answer: D

NEW QUESTION # 370
Users at a company are reporting they are unable to access the URL for a new retail website because it is flagged as gambling and is being blocked.
Which of the following changes would allow users to access the site?

- A. Tuning the DLP rule that detects credit card data
- B. Updating the categorization in the content filter
- C. Creating a firewall rule to allow HTTPS traffic
- D. Configuring the IPS to allow shopping

Answer: B

Explanation:
Explanation
A content filter is a device or software that blocks or allows access to web content based on predefined rules or categories. In this case, the new retail website is mistakenly categorized as gambling by the content filter, which prevents users from accessing it. To resolve this issue, the content filter's categorization needs to be updated to reflect the correct category of the website, such as shopping or retail. This will allow the content filter to allow access to the website instead of blocking it.
