## Pass Guaranteed Quiz Efficient HCL Software Academy - HCL-DOM-AADM-12 - HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 New Test Materials

Our HCL-DOM-AADM-12 practice quiz will provide three different versions, the PDF version, the software version and the online version. The trait of the software version of our HCL-DOM-AADM-12 exam dump is very practical. Although this version can only be run on the windows operating system, the software version our HCL-DOM-AADM-12 Guide materials is not limited to the number of computers installed, you can install the software version in several computers. So you will like the software version, of course, you can also choose other versions of our HCL-DOM-AADM-12 study torrent if you need.

## HCL Software Academy HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 Sample Questions (Q67-Q72):

NEW QUESTION # 67

What is created when registering a new user using the Domino Administrator Client?

- A. Full-text index and ACL
- B. Group document and mailbox folder
- C. Server ID and connection document
- **D. Person document and Notes ID file**

**Answer: D**

Explanation:

In HCL Domino, the registration process is the primary way to establish a user's identity within the domain.

When an administrator uses the Domino Administrator Client to register a person, the system generates a Person document in the Domino Directory (names.nsf), which contains the user's public key and configuration. Simultaneously, it creates a Notes ID file, which stores the user's private key required for authentication and encryption. While a mail file is often created as part of this workflow, the document and ID file are the fundamental identity components.

---

---

#### **NEW QUESTION # 68**

Which database is used by Domino to store DDM event data?

- A. events4.nsf
- **B. ddm.nsf**
- C. names.nsf
- D. admin4.nsf

**Answer: B**

Explanation:

Domino Domain Monitoring (DDM) is a feature that centralizes the monitoring of multiple servers within a domain. All event data generated by DDM—such as probes that check server health or security—is stored in the ddm.nsf (Domino Domain Monitoring) database. Administrators use this database to view reports, track trends, and identify specific issues that require attention across their entire server infrastructure.

---

---

#### **NEW QUESTION # 69**

How can administrators be proactively alerted about issues in the Domino environment?

- A. By running the Domino Setup Utility daily
- **B. By configuring event generators in DDM**
- C. By updating the server notes.ini file
- D. By disabling SMTP routing

**Answer: B**

Explanation:

Domino Domain Monitoring (DDM) is the primary tool for proactive alerting within a Domino environment. By configuring event generators in DDM, administrators can set specific thresholds for server health, mail routing delays, and security events. When these thresholds are met, DDM generates an alert in the ddm.nsf database, which can then be configured to send notifications (such as emails) to administrators, allowing them to resolve issues before they impact end users.

#### **NEW QUESTION # 70**

Where are DAOS objects physically stored on the server?

- **A. In the designated DAOS base path directory**
- B. In the ddm.nsf file
- C. In the Domino Directory
- D. Inside the mail.box file

**Answer: A**

Explanation:

The Domino Attachment and Object Service (DAOS) works by extracting file attachments from standard NSF databases and storing them as separate objects. These objects (files with a .NLO extension) are physically stored in a designated DAOS base path directory on the server's file system. This path is defined in the Server document, and within it, DAOS creates a series of subdirectories to organize the objects efficiently and prevent any single folder from containing too many files.

---

#### **NEW QUESTION # 71**

What is the purpose of using a silent install method for Domino server installation?

- A. To require manual license key entry
- B. To allow interactive, real-time feedback during setup
- **C. To automate installation without user interaction**
- D. To enforce GUI-based configuration only

**Answer: C**

Explanation:

The Silent Install method is used to automate the installation of Domino binaries across one or many servers without requiring a person to manually click through the graphical interface. This is achieved by using a "response file" that contains all the necessary installation parameters. It is highly efficient for large-scale deployments or for installing Domino on remote servers where a graphical display (GUI) may not be available.

---

#### **NEW QUESTION # 72**

.....

Under the guidance of our HCL-DOM-AADM-12 preparation materials, you are able to be more productive and efficient, because we can provide tailor-made exam focus for different students, simplify the long and boring reference books by adding examples and diagrams and our experts will update HCL-DOM-AADM-12 Guide dumps on a daily basis to avoid the unchangeable matters. You can finish your daily task with our HCL-DOM-AADM-12 study materials more quickly and efficiently.
