

Test JN0-481 Guide Online & JN0-481 Real Braindumps

Our experts have experience of the exam for over ten years. So our JN0-481 practice materials are their masterpiece full of professional knowledge and sophistication to cope with the JN0-481 exam. They have sublime devotion to their career just like you, and make progress ceaselessly. By keeping close eyes on the current changes in this field, they make new updates of JN0-481 Study Guide constantly and when there is any new, we will keep you noticed to offer help more carefully.

The Juniper JN0-481 practice exam software will provide you with feedback on your performance. The Juniper JN0-481 practice test software also includes a built-in timer and score tracker so students can monitor their progress. JN0-481 Practice Exam enables applicants to practice time management, answer strategies, and all other elements of the final Juniper JN0-481 certification exam and can check their scores.

JN0-481 Real Braindumps | New JN0-481 Dumps

The ActualTestsIT is a trusted and reliable platform that has been offering real, valid, and verified JN0-481 exam questions. These ActualTestsIT JN0-481 exam questions are designed and checked by the Juniper subject matter experts. They check each ActualTestsIT JN0-481 Exam Practice question thoroughly and ensure the top standard of ActualTestsIT JN0-481 exam questions all the time.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q57-Q62):

NEW QUESTION # 57

You have designed your fabric in Juniper Apstra prior to deploying the network devices. Which Apstra element in the Staged tab would be used to assist the team that is installing and cabling the devices?

- A. Connectivity Templates
- **B. Links table**
- C. Virtual Networks table
- D. Managed Devices list

Answer: B

Explanation:

The Links table in the Staged tab shows the physical connections between the devices in the fabric. It provides information such as the source and destination device names, hostnames, serial numbers, roles, interfaces, and link status. The Links table can be used to assist the team that is installing and cabling the devices by verifying that the devices are connected correctly and that the links are operational. The Links table can also be used to troubleshoot any connectivity issues that may arise during the installation process.

NEW QUESTION # 58

You are working to build an ESI-LAG for a multihomed server. The ESI-LAG is not coming up as multihomed. Referring to the exhibit, what are two solutions to this problem? (Choose two.)

- A. The gateway IP addresses on both devices must be different.
- B. The loopback IP addresses on both devices must be the same.
- C. The ESI ID on both devices must be the same.
- D. The LACP system ID on both devices must be the same.

Answer: C,D

Explanation:

An ESI-LAG is a link aggregation group (LAG) that spans two or more devices and is identified by an Ethernet segment identifier (ESI). An ESI-LAG provides redundancy and load balancing for a multihomed server in an EVPN-VXLAN network. To configure an ESI-LAG, you need to ensure that the following requirements are met:

The LACP system ID on both devices must be the same. This ensures that the LACP protocol can negotiate the LAG parameters and form a single logical interface for the server.

The ESI ID on both devices must be the same. This ensures that the EVPN control plane can advertise the ESI-LAG as a single Ethernet segment and synchronize the MAC and IP addresses of the server across the devices.

The VLAN ID and VNI on both devices must be the same. This ensures that the server can communicate with other hosts in the same virtual network and that the VXLAN encapsulation and decapsulation can work properly.

In the exhibit, the LACP system ID and the ESI ID on both devices are different, which prevents the ESI-LAG from coming up as multihomed. Therefore, the correct answer is B and D. The LACP system ID on both devices must be the same and the ESI ID on both devices must be the same.

NEW QUESTION # 59

Which protocol is used to advertise EVPN routes?

- A. IS-IS
- B. BGP
- C. RIP
- D. OSPF

Answer: B

Explanation:

BGP is the protocol used to advertise EVPN routes. EVPN routes are a new type of BGP network layer reachability information (NLRI) that carry MAC address and IP prefix information for Ethernet VPNs. EVPN routes are exchanged between PEs using BGP multiprotocol extensions (MP-BGP) over MPLS, VXLAN, SR, or SRv6 tunnels. EVPN routes enable PEs to learn the reachability of MAC addresses and IP prefixes of different sites within the same EVPN instance.

EVPN routes also support various features such as fast convergence, redundancy, aliasing, and inter-subnet routing.

NEW QUESTION # 60

You have a virtual network that needs controlled access to other virtual networks in the same routing zone. Using the Juniper Apstra UI, which feature would be used to accomplish this task?

- A. interface policy
- B. anti-affinity policy
- C. routing policy
- D. security policy

Answer: D

Explanation:

A security policy is the feature that would be used to accomplish the task of controlling access to other virtual networks in the same routing zone using the Juniper Apstra UI. A security policy allows you to define rules that specify which traffic is allowed or denied between different virtual networks, IP endpoints, or routing zones. A security policy can be applied to one or more virtual networks in the same routing zone, and it can use various criteria to match the traffic, such as source and destination IP addresses, protocols, ports, or tags. A security policy can also support DHCP relay, which enables the forwarding of DHCP requests from one virtual network to another.

NEW QUESTION # 61

You are receiving cable, interface, and BGP anomalies from several devices within the data center fabric. In Juniper Apstra, how would you troubleshoot these types of errors?

- A. In the UI, go to Devices and confirm that agent connectivity is fine.
- B. In the UI, go to Time Voyager and revert to the last working version.
- **C. In the UI, verify device connectivity by consulting the cable map.**
- D. In the UI, access the console to the devices and review the interface states.

Answer: C

Explanation:

The cable map is a graphical representation of the physical connections between the devices in the data center fabric. It shows the status of the cables, interfaces, and BGP sessions for each device. You can use the cable map to identify and troubleshoot any cable, interface, or BGP anomalies that may occur in the fabric. You can also filter the cable map by device name, device type, device role, device state, cable state, interface state, or BGP state.

NEW QUESTION # 62

.....

Our JN0-481 Research materials design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our JN0-481 Learning Materials provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality.

JN0-481 Real Braindumps: <https://www.actualtestsit.com/Juniper/JN0-481-exam-prep-dumps.html>

The astonishing success rate of JN0-481 clients is enough to prove the quality and benefit of the study questions of JN0-481, We would like to benefit our customers from different countries who decide to choose our JN0-481 study guide in the long run, so we cooperation with the leading experts in the field to renew and update our JN0-481 learning materials, This JN0-481 exam questions and answers are designed to fully prepare you to pass your JN0-481 exam in the first try.

Click the Sign Up button, It is an operating system, comparable to Windows, The astonishing success rate of JN0-481 clients is enough to prove the quality and benefit of the study questions of JN0-481.

Test JN0-481 Guide Online - 2026 First-grade Juniper JN0-481 Real Braindumps 100% Pass

We would like to benefit our customers from different countries who decide to choose our JN0-481 study guide in the long run, so we cooperation with the leading experts in the field to renew and update our JN0-481 learning materials.

This JN0-481 exam questions and answers are designed to fully prepare you to pass your JN0-481 exam in the first try, We have online chat service, and if you have any questions for JN0-481 training materials, you can consult us.

Numerous guides and their regular online updates of JN0-481 the training material make sure that the candidates are good to take exam at stage in their lives.
