- A. Configuration
- B. Business
- C. Master
- D. Organization
- E. Transaction

Answer: C,D,E

Explanation:
Comprehensive and Detailed In-Depth Explanation:
SAP S/4HANA Cloud, including EWM, manages various data types. Option A ("Transaction") is correct for operational data (e.g., warehouse tasks), option C ("Master") is correct for foundational data (e.g., material master), and option D ("Organization") is correct for structural data (e.g., warehouse number), all integral to EWM and configured via master data and transaction processing. Option B (configuration) is a setup activity, not a data type, and option E (business) is too vague.

- C. Control of rule-based determination of process steps
- D. Assignment as an intermediate storage group

Answer: B,D

Comprehensive and Detailed In-Depth Explanation:
A storage group in SAP EWM organizes storage types logically or physically. Option B ("Assignment as an intermediate storage group") is correct as it can act as a temporary grouping for putaway or picking, configured in SPRO: SCM Extended Warehouse Management > Master Data > Define Storage Groups. Option C ("Definition of a logical or physical breakdown of a storage type") is correct because it categorizes storage types (e.g., high rack vs. bulk).
