

# D-PWF-OE-00 Exam Details, D-PWF-OE-00 Lead2pass Review

We have livechat to wipe out your doubts about our D-PWF-OE-00 exam materials. You can ask any question about our Dell PowerFlex Operate Exam study materials. All of our online workers are going through special training. They are familiar with all details of D-PWF-OE-00 practice guide. Also, you have easy access to Dell PowerFlex Operate Exam free demo, and you are available for our free updated version of the D-PWF-OE-00 Real Exam. Whenever you have problems about our D-PWF-OE-00 study materials, you can contact our online workers via email. We warmly welcome you to experience our considerate service.

If you are the first time to prepare the D-PWF-OE-00 exam, it is better to choose a type of good study materials. After all, you cannot understand the test syllabus of the D-PWF-OE-00 exam in the whole round. It is important to predicate the tendency of the D-PWF-OE-00 study materials if you want to easily pass the exam. And our D-PWF-OE-00 Exam Questions are the one which can exactly cover the latest information of the exam in the first time for our professionals are good at this subject and you can totally rely on us.

## D-PWF-OE-00 Lead2pass Review & Brindumps D-PWF-OE-00 Pdf

These EMC D-PWF-OE-00 exam practice questions will greatly help you to prepare well for the final D-PWF-OE-00 certification exam. EMC D-PWF-OE-00 exam preparation and boost your confidence to pass the D-PWF-OE-00 Exam. All EMC D-PWF-OE-00 exam practice test questions contain the real and updated EMC D-PWF-OE-00 exam practice test questions.

### EMC D-PWF-OE-00 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>Expanding a PowerFlex Cluster: This domain focuses on cluster expansion and maintenance including using maintenance modes, adding nodes, configuring Storage Data Servers and Meta Data Managers, and understanding PowerFlex integration with APEX.</li></ul> |

|         |   |
|---------|---|
| Topic 2 | <ul style="list-style-type: none"> <li>• PowerFlex Security: This section addresses security administration through managing user accounts and access privileges, integrating CloudLink for encryption, and configuring system alerting.</li> </ul>   |
| Topic 3 | <ul style="list-style-type: none"> <li>• Protecting PowerFlex Storage: This section covers data protection through snapshot technology for point-in-time copies and volume replication between clusters for disaster recovery.</li> </ul>   |
| Topic 4 | <ul style="list-style-type: none"> <li>• PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.</li> </ul>  |
| Topic 5 | <ul style="list-style-type: none"> <li>• PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.</li> </ul> |

## EMC Dell PowerFlex Operate Exam Sample Questions (Q70-Q75):

### NEW QUESTION # 70

What steps are required to configure secure user accounts in PowerFlex? (Choose two).

- A. Enable multi-factor authentication
- B. Configure password policies
- C. Assign VLANs to user accounts
- D. Integrate PowerFlex with LDAP

**Answer: B,D**

Explanation:

Securing access to the management interface is a critical step in the "Day 0" or "Day 1" configuration.

\* Integrate PowerFlex with LDAP (Option A): For enterprise environments, managing local users on every system is inefficient and insecure. PowerFlex supports integration with Lightweight Directory Access Protocol (LDAP) servers (like Active Directory). This allows administrators to centralize user management and map Active Directory groups to PowerFlex roles (e.g., Admin, Monitor).

\* Configure password policies (Option C): For local user accounts (which are necessary for emergency access if LDAP is down), PowerFlex allows the definition of strict password policies. This includes setting requirements for password complexity (length, special characters), expiration intervals, and history (preventing reuse of old passwords).

Incorrect Options: VLANs (B) are network constructs, not user account settings. While MFA (D) is highly recommended, it is typically enforced at the Identity Provider (IdP) level (like Keycloak within PowerFlex Manager) rather than being a simple checkbox "step" inside the core SDS configuration.

### NEW QUESTION # 71

Before starting a PowerFlex upgrade, which step is essential to ensure the process completes successfully?

- A. Enable deduplication on all volumes
- B. Disable SNMP traps
- C. Verify cluster health and resolve any critical issues
- D. Reset all storage pools to default settings

**Answer: C**

Explanation:

Verifying cluster health is the absolute prerequisite before attempting any upgrade or maintenance activity.

An upgrade involves taking nodes offline (rebooting) sequentially. When a node goes offline, the cluster relies on the remaining nodes to serve I/O and maintain data redundancy.

\* If the cluster is already in a Degraded state (e.g., a drive is failed, or capacity is nearly full), taking a node offline could result in Data Unavailable (DU) or Data Loss (DL).

\* PowerFlex Manager and the CLI provide "Pre-upgrade Health Checks." These checks validate:

\* No active rebuilds or rebalances are running.

\* All SDS and MDM components are connected and synchronized.

\* There is sufficient spare capacity to handle a node failure or maintenance mode.

Resetting pools (Option A) creates data loss. Deduplication (Option C) is a feature choice, not an upgrade requirement.

### NEW QUESTION # 72

Which feature of PowerFlex is leveraged to expand storage capacity in a cluster?

- A. Dynamic Node Addition
- B. Snapshots
- C. Fault Sets
- D. Shared File Systems

**Answer: A**

Explanation:

PowerFlex is a scale-out architecture.

\* Dynamic Node Addition (Option B): This refers to the ability to add new x86 servers (nodes) to the cluster on the fly. When you add a node with local drives, the PowerFlex software automatically recognizes the new capacity. It then initiates a Rebalance operation, moving data chunks from existing full nodes to the new empty node until usage is uniform across the cluster. This process increases both Storage Capacity and Performance (IOPS/Bandwidth) linearly.

Incorrect Options:

\* Fault Sets (A) organize nodes for availability, they do not add capacity.

\* Snapshots (C) consume capacity.

\* Shared File Systems (D) manage how capacity is accessed (NAS), not the expansion of the raw block layer.

### NEW QUESTION # 73

PowerFlex upgrades require all nodes to be in Maintenance Mode. True. False.

- A. False
- B. True

**Answer: A,B**

Explanation:

PowerFlex is designed for Non-Disruptive Upgrades (NDU). Requiring all nodes to be in maintenance mode simultaneously would cause a complete cluster outage (Data Unavailable), which defeats the purpose of the architecture.

The upgrade process is rolling.

\* Node 1 enters Maintenance Mode (data is safe on other nodes).

\* Node 1 is upgraded and rebooted.

\* Node 1 rejoins the cluster and syncs data.

\* The system moves to Node 2.

At no point is the entire cluster in maintenance mode. The cluster remains online and serves I/O throughout the entire process.

### NEW QUESTION # 74

Which task is a valid operation for manipulating volumes in PowerFlex?

- A. Configure VLAN tagging for the volume
- B. Add volumes to metadata managers
- C. Create snapshots of the volume
- D. Assign volumes to fault sets

**Answer: C**

Explanation:

Administrators perform various operations on Volumes to manage data lifecycles.

\* Create snapshots of the volume (Option B): This is a standard Day-2 operation. A user can select a volume and trigger a snapshot (or a consistency group snapshot). This creates a point-in-time, writable copy of the volume instantly.

\* Why others are incorrect:

\* Fault Sets (A): Volumes are not assigned to Fault Sets. SDS nodes are assigned to Fault Sets.

Volumes live in Storage Pools.

\* VLAN tagging (C): VLANs are configured on the SDC (client) network interfaces or the switch, not on the storage volume itself.

\* Add to MDM (D): The MDM manages the volume map, but you do not manually "add" a volume to an MDM; you create a

volume via the MDM.

## NEW QUESTION # 75

.....

We hope you can find the information you need at any time while using our D-PWF-OE-00 study materials. In addition to the content updates, our system will also be updated for the D-PWF-OE-00 training materials. If you have any opinions, you can tell us that our common goal is to create a product that users are satisfied with. We have three different D-PWF-OE-00 Exam Braindumps for you to choose: the PDF, Software and APP online. And the varied displays can help you study at any time and condition.
