최신 Usability Testing CT-UT 무료 샘플문제 (Q12-Q17):

질문 # 12

Usability reviews aim to identify potential usability problems based on certain criteria. Which of the following is a reasonable criterion for a usability review?

- A. Functional requirements
- B. Usability standards
- C. Statutory Code of Practice
- D. Opinion of the management

정답: B

설명:

Usability reviews evaluate a system or interface against established usability principles or standards to identify potential issues before user testing. A recognized criterion for such reviews includes adherence to usability standards such as ISO 9241 or the Web Content Accessibility Guidelines (WCAG). These standards are derived from years of research and user-centered design principles. Options A and C do not directly relate to usability. Functional requirements (option B) refer to what the system should do, not how usable it is.

Hence, option D is correct as usability standards provide a consistent, objective basis for evaluating usability.

질문 # 13

Which of the following statements best describe Rapid Iterative Testing and Evaluation?

- A. Testing is quantitative
- B. Testing is informal and many potential users can be accessed
- C. Testing focuses on instant redesigns and confirming made changes
- D. Testing happens on a regular basis, e.g. each Monday

정답: C

설명:

Rapid Iterative Testing and Evaluation (RITE) is a usability method in which usability issues are identified and addressed in short cycles. Unlike traditional usability testing, RITE allows for immediate redesigns and retesting of the improved version within the same study. The goal is to refine the design quickly based on observed usability issues. Option A confuses scheduling with methodology, B is too vague, and D inaccurately characterizes RITE as quantitative, while it is typically qualitative. Therefore, C accurately reflects the purpose and approach of RITE.

질문 # 14

Why are positive usability findings of high importance? Which of the following statements is wrong?

- A. Positive usability findings allow a better view of the usability of the product.
- **B. Positive findings are of high importance because they can be used in the report to justify the costs of the test.**
- C. Positive usability findings should be used to communicate to the development team which features should not be modified or deleted.
- D. Positive usability findings make it easier to sell the need for correcting usability problems by giving a balanced view.

정답: B

설명:

Positive usability findings play a key role in reinforcing what is working well in the user interface. They help:

A: Build developer confidence and soften criticism when pointing out issues.

C: Provide a complete picture of usability strengths and weaknesses.

D: Inform developers what should remain unchanged during redesign.

However, B is incorrect because justifying usability test costs should not rely solely on positive findings. Cost justification should come from the overall impact of usability on user satisfaction, performance, and business outcomes-not just good results.

질문 # 15

Which of the following is the highest WCAG conformance level, promising the most accessible content?

- A. Quadruple A (AAAA)
- B. Double A (AA)
- C. Single A (A)
- **D. Triple A (AAA)**

정답: D

설명:

The Web Content Accessibility Guidelines (WCAG) define three levels of conformance for web content accessibility:

Level A (Single A) is the minimum level of compliance.

Level AA (Double A) is the standard recommended for most websites, balancing accessibility and design.

Level AAA (Triple A) is the highest and most comprehensive level of accessibility, covering the widest range of needs.

There is no such level as "Quadruple A (AAAA)," making option D invalid.

Thus, WCAG Triple A (AAA) promises the most accessible content, even though it may not always be practically achievable for all types of content.

질문 # 16

What is good accessibility?

- A. Good usability of a software product on all devices (smart phone, computer, etc.)
- B. Good usability regardless of disturbances like bright sunlight, noise or wind
- C. Good usability of a software product by people with limited knowledge of the software
- D. Good usability of a software product by people with limited vision, hearing, dexterity, cognition or physical mobility

정답: D

설명:

Accessibility refers to designing products so that people with disabilities or limitations (permanent or temporary) can use them effectively. According to the Web Content Accessibility Guidelines (WCAG) and ISO standards, accessibility focuses on ensuring that users with vision, hearing, cognitive, or mobility impairments can access digital interfaces. Option D captures this intent accurately. The other options relate to general usability or responsiveness (e.g., device adaptability or user experience in noisy environments) but do not address the inclusive nature of accessibility as defined by official guidelines.
