Axis Network Video Exam Sample Questions (Q95-Q100):

NEW QUESTION # 95

A customer is not getting the storage retention they had expected while using H.264 with an AXIS Q6034-E PTZ camera on a continuous guard tour. What is the most likely cause of the problem?

- A. The estimations were done in MPEG-4 and they should change the AXIS Q6034-E to run in MPEG-4 instead of H.264
- B. Using continuous guard tour does not let H.264 save as much on the compression
- C. The estimation was only planned for a 720p HDTV PTZ
- D. Because most of the areas in the guard tour are empty. H.264 cannot save as much on the compression

Answer: B

NEW QUESTION # 96

The first time an Axis camera's Live View is accessed the user is prompted to do which of the following?

- A. Configure a root password
- B. Select a resolution
- C. Assign IP address
- D. Enter a camera name

Answer: A

Explanation:

The first time an Axis camera's Live View is accessed, the user is prompted to configure a root password. This step is essential for securing the camera and preventing unauthorized access. Setting a strong root password ensures that only authorized users can modify the camera's settings and view the video stream.

NEW QUESTION # 97

How can existing coaxial cable be leveraged when installing network cameras?

- A. Coax cannot be leveraged for network cameras
- B. They can be used but are normally in bad shape, making them futile to use
- C. By using a media converter
- D. They are excellent for power transmission

Answer: C

NEW QUESTION # 98

If your PoE switch is unable to supply sufficient power to the network device, which of the following should be used?

- A. PoE extender
- B. A layer 3 switch
- C. A UPS
- D. A midspan

Answer: D

Explanation:

If a PoE (Power over Ethernet) switch is unable to supply sufficient power to a network device, a midspan, also known as a PoE injector, should be used. A midspan is an external device that adds power to the Ethernet cable, thus providing the necessary power to the network device. This is particularly useful when existing network infrastructure cannot be upgraded to meet power requirements. According to Axis documentation, midspans are recommended to ensure adequate power delivery for network devices that require PoE.

NEW QUESTION # 99

In an Ethernet network, broadcast traffic is received and processed by

- A. Only those devices that have registered with the server to receive the traffic, making it suitable for network video since the network load would be kept reasonable.
- B. **All devices on the network, making it unsuitable for network video since the network load would be unacceptable.**
- C. Only those devices that have registered with the server to receive the traffic, making it unsuitable for network video, due to the overhead from establishing a separate connection to the server.
- D. All devices on the network, making it suitable for network video since any device can access the video without any overhead from establishing a separate connection to the server.

Answer: B

NEW QUESTION # 100

A good brand is not a cheap product, but a brand that goes well beyond its users' expectations.
