GH-900 valid study dumps & GH-900 actual prep torrent

Experts at DumpsMaterials have also prepared Microsoft GH-900 practice exam software for your self-assessment. This is especially handy for preparation and revision. You will be provided with an examination environment and you will be presented with actual exam Microsoft GH-900 Exam Questions. This sort of preparation method enhances your knowledge which is crucial to excelling in the actual certification exam.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
Topic 2	<ul style="list-style-type: none">• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.

Topic 3	<ul style="list-style-type: none"> • Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.
Topic 4	<ul style="list-style-type: none"> • Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 5	<ul style="list-style-type: none"> • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 6	<ul style="list-style-type: none"> • Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Microsoft GitHub Foundations Sample Questions (Q24-Q29):

NEW QUESTION # 24

While maintaining the gist history, which of the following is the most efficient way to create a public gist based on another user's gist?

- A. Request to be added to the existing gist.
- B. Clone the gist.
- C. Create a new gist and copy the content from the existing gist.
- **D. Fork the gist.**

Answer: D

Explanation:

Forking a gist is the most efficient way to create a public gist based on another user's gist while maintaining the history of the original gist. When you fork a gist, you create a new gist in your own account that retains a link to the original, allowing you to track changes and contribute back if desired.

Forking a Gist:

Option A is correct because forking is a straightforward way to create your own copy of another user's gist while preserving the history and making it easy to track updates.

NEW QUESTION # 25

What is the difference between an organization member and an outside collaborator?

- A. Outside collaborators cannot be given the admin role on a repository.
- **B. Organization base permissions do not apply to outside collaborators.**
- C. Two-factor authentication (2FA) is not required for outside collaborators.
- D. Outside collaborators do not consume paid licenses.

Answer: B

Explanation:

In GitHub, an organization member is a user who has been added to an organization and is subject to the organization's base permissions and policies. An outside collaborator is a user who is not a member of the organization but has been granted access to one or more repositories within the organization.

Here's the difference between an organization member and an outside collaborator:

Organization Members:

Members are subject to the organization's base permissions, which apply across all repositories within the organization. These permissions might include read, write, or admin access, depending on what has been set as the default.

Members consume paid licenses if the organization is on a paid plan.

Members are required to have two-factor authentication (2FA) if the organization enforces it.

Outside Collaborators:

Outside collaborators do not have organization-wide permissions. They only have access to specific repositories to which they have been granted permission. This means organization base permissions do not apply to them (making option A correct).

Outside collaborators do not consume paid licenses. They are only counted toward the license if they are made organization members.

Outside collaborators can be granted any level of permission, including the admin role on specific repositories.

Two-factor authentication (2FA) can be enforced for outside collaborators at the repository level, depending on the organization's security settings.

Given this information, option A is the correct answer: "Organization base permissions do not apply to outside collaborators."

GitHub Documentation: About outside collaborators

GitHub Documentation: Managing repository access for your organization

NEW QUESTION # 26

Which of the following outcomes can be achieved with a branch protection rule?

- A. Block code pushes that contain hardcoded secrets.
- B. Restrict who can view the branch.
- C. Require two-factor authentication (2FA) by code contributors.
- **D. Require approval before merging changes.**

Answer: D

Explanation:

Managing a branch protection rule

You can create a branch protection rule to enforce certain workflows for one or more branches, such as requiring an approving review or passing status checks for all pull requests merged into the protected branch.

Reference:

<https://docs.github.com/en/repositories/configuring-branches-and-merges-in-your-repository/managing-protected-branches/managing-a-branch-protection-rule>

NEW QUESTION # 27

Which of the following keywords are used to link a pull request to an issue? (Choose three.)

- A. join
- **B. fix**
- **C. resolves**
- **D. closed**
- E. merge
- F. connects

Answer: B,C,D

Explanation:

Linking a pull request to an issue using a keyword

You can link a pull request to an issue by using a supported keyword in the pull request's description or in a commit message. The pull request must be on the default branch.

close

closes

closed [E]

fix [A]

fixes

fixed

resolve

resolves [B]

resolved

Reference:

<https://docs.github.com/en/issues/tracking-your-work-with-issues/using-issues/linking-a-pull-request-to-an-issue>

NEW QUESTION # 28

Why are GitHub pull request templates recommended for use? (Choose two.)

- A. to automatically trigger GitHub Actions workflows
- **B. to easily coerce existing pull requests into a standard format**
- C. to automatically label or assign newly created pull requests
- **D. to provide an easy-to-fill-out form for creating new pull requests**

Answer: B,D

Explanation:

With issue and pull request templates, you can customize and standardize the information you'd like contributors to include when they open issues and pull requests in your repository.

Pull request templates

When you add a pull request template to your repository, project contributors will automatically see the template's contents in the pull request body.

Reference:

<https://docs.github.com/en/communities/using-templates-to-encourage-useful-issues-and-pull-requests/about-issue-and-pull-request-templates>

NEW QUESTION # 29

.....

Studying from an updated practice material is necessary to get success in the Microsoft GH-900 certification test on the first try. If you don't adopt this strategy, you will not be able to clear the GitHub Foundations (GH-900) examination. Failure in the GitHub Foundations (GH-900) test will lead to loss of confidence, time, and money.
