Total Number of Questions in the ISC CISSP exam

The number of questions is 100-150.

ISC CISSP certification exam is a rigorous exam that tests the knowledge of candidates in various areas of information security. CISSP exam covers eight domains, including security and risk management, asset security, security engineering, communications and network security, identity and access management, security assessment and testing, security operations, and software development security. Candidates must demonstrate their proficiency in each of these domains to earn the certification.

The CISSP certification exam is a comprehensive exam that covers eight domains of information security. These domains include security and risk management, asset security, security engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security. CISSP Exam consists of 250 multiple-choice questions and is designed to test the candidate's knowledge, skills, and abilities in each of these domains. Passing the CISSP certification exam requires a score of at least 700 out of 1000 points and a minimum of five years of professional experience in the information security field.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1805-Q1810):

NEW QUESTION # 1805

A health care provider is considering Internet access for their employees and patients.

Which of the following is the organization's MOST secure solution for protection of data?

- A. User ID and password
- **B. Public Key Infrastructure (PKI) and digital signatures**
- C. Asymmetric encryption and User ID
- D. Trusted server certificates and passphrases

Answer: B

NEW QUESTION # 1806

Which of the following statements pertaining to access control is FALSE?

- **A. If access is not explicitly denied, it should be implicitly allowed.**
- B. Users should only access data on a need-to-know basis.
- C. Access rights should be granted based on the level of trust a company has on a subject.
- D. Roles can be an efficient way to assign rights to a type of user who performs certain tasks.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

This answer is false as access control mechanisms should default to no access. The correct statement is that if access is not explicitly allowed, it should be implicitly denied.

Incorrect Answers:

A, C: Access rights should be granted to users based on their level of trust and their need-to-know.

D: Using roles is an effective method of assigning rights to a certain user who executes a specific task.

NEW QUESTION # 1807

What is the primary purpose of the stakeholder needs and requirements definition process in support of systems security engineering?

- A. Define the functional requirements for a system that can provide the capabilities needed by processing resources in a defined environment
- **B. Define the objective requirements for a system that can provide the capabilities needed by applications in a defined environment**
- C. Define the stakeholder requirement for a system that can provide the capabilities needed by users and other stakeholders in an environment

- D. Define the security requirements for a system that can provide the capabilities needed by users and other stakeholders in a defined environment

Answer: B

NEW QUESTION # 1808

Which of the following statements is true regarding value boundary analysis as a functional software testing technique

- A. It is useful for testing communication protocols and graphical user interfaces
- B. An entire partition can be covered by considering one representative value from that partition
- C. Test inputs are obtained from the derived threshold of the given functional specifications
- D. It is characterized by the stateless behavior of a process implemented in a function

Answer: C

NEW QUESTION # 1809

The number of violations that will be accepted or forgiven before a violation record is produced is called which of the following?

- A. Acceptance level
- B. Logging level
- C. Forgiveness level
- D. Clipping level

Answer: D

Explanation:

Explanation/Reference:

Explanation:

The correct answer is "clipping level". This is the point at which a system decides to take some sort of action when an action repeats a preset number of times.

In order to limit the amount of audit information flagged and reported by automated violation analysis and reporting mechanisms, clipping levels can be set. Using clipping levels refers to setting allowable thresholds on a reported activity. For example, a clipping level of three can be set for reporting failed log-on attempts at a workstation. Thus, three or fewer log-on attempts by an individual at a workstation will not be reported as a violation, thus eliminating the need for reviewing normal log-on entry errors.

Incorrect Answers:

B: Acceptance level is not the correct term for the number of violations that will be accepted or forgiven before a violation record is produced.

C: Forgiveness level is not the correct term for the number of violations that will be accepted or forgiven before a violation record is produced.

D: Logging level is a term used to describe what types of events are logged. It is not the correct term for the number of violations that will be accepted or forgiven before a violation record is produced.
