Up to now, we have successfully issued three packages for you to choose. They are PDF version, online test engines and windows software of the CloudSec-Pro practice prep. The three packages can guarantee you to pass the exam for the first time. Though the content is the same with all versions of the CloudSec-Pro Study Materials, the displays are totally different. And every display has its advantage to cater to different people according to their interest and hobbies. You may choose the right version of our CloudSec-Pro exam questions.

Our CloudSec-Pro exam questions are compiled by experts and approved by the professionals with years of experiences. They are revised and updated according to the change of the syllabus and the latest development situation in the theory and practice. The language is easy to be understood which makes any learners have no obstacles and our CloudSec-Pro Guide Torrent is suitable for anyone. The content is easy to be mastered and has simplified the important information. Our CloudSec-Pro test torrents convey more important information with less questions and answers and thus make the learning relaxing and efficient.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.
Topic 2	<ul style="list-style-type: none"> • Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 3	<ul style="list-style-type: none"> • Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI • CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.
Topic 4	<ul style="list-style-type: none"> • Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI • ML and threat intelligence support incident response, categorization, and prioritization.
Topic 5	<ul style="list-style-type: none"> • Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.

Palo Alto Networks Cloud Security Professional Sample Questions (Q66-Q71):

NEW QUESTION # 66

Which resources can be added in scope while creating a vulnerability policy for continuous integration?

- A. Labels and AccountID
- B. Images and labels
- C. Images and containers
- D. Images and cluster

Answer: C

Explanation:

When creating a vulnerability policy for continuous integration within Prisma Cloud, the scope of the policy can include specific resources that are critical to the CI/CD pipeline, such as images and containers. These resources are central to the development and deployment processes in containerized environments. By focusing on images and containers, the policy can effectively identify and address vulnerabilities that might be present in container images before they are deployed or in running containers, thereby enhancing the security of the continuous integration and deployment pipeline. This approach ensures that only secure, compliant container images are used in production, reducing the risk of vulnerabilities being exploited.

NEW QUESTION # 67

What are two alarm types that are registered after alarms are enabled? (Choose two.)

- A. Onboarded Cloud Accounts status
- B. Compute resources
- C. External integrations status
- D. Resource status

Answer: A,C

Explanation:

Upon enabling alarms in Prisma Cloud, two critical alarm types that are registered are Onboarded Cloud Accounts status (A) and External integrations status (D). These alarms are pivotal for maintaining the health and security of the cloud environment. The Onboarded Cloud Accounts status alarms alert administrators about the connectivity and health of cloud accounts integrated with Prisma Cloud, ensuring continuous monitoring and security coverage. The External integrations status alarms provide notifications regarding the operational status of third-party services and tools integrated with Prisma Cloud, such as SIEMs, ticketing systems, or other security tools, ensuring that these integrations function correctly to support comprehensive security and incident response workflows.

NEW QUESTION # 68

Which two bot categories belong to unknown bots under Web-Application and API Security (WAAS) bot protection? (Choose two.)

- A. HTTP libraries
- B. News bots
- C. Web scrapers
- D. Search engine crawlers

Answer: A,C

Explanation:

Under Web-Application and API Security (WAAS) bot protection in Prisma Cloud, unknown bots are categorized based on their behavior and characteristics. Web scrapers and HTTP libraries fall into the category of unknown bots. Web scrapers are automated scripts or programs that extract data from websites, often without permission, while HTTP libraries are tools used for making HTTP requests. Both can be used benignly but may also be employed in malicious activities, hence their classification as unknown bots requiring further analysis.

NEW QUESTION # 69

A customer has serverless functions that are deployed in multiple clouds.

Which serverless cloud provider is covered by "overly permissive service access" compliance check?

- A. Azure
- B. GCP
- C. AWS
- D. Alibaba

Answer: C

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/compliance/serverless.html>

The serverless cloud provider covered by the "overly permissive service access" compliance check is AWS (Amazon Web Services). AWS Lambda, which is the serverless computing platform provided by AWS, may have functions that are assigned more permissions than they require to perform their operations, leading to security risks.

In the context of CSPM tools, such as Prisma Cloud, checks for overly permissive service access would typically include examining the policies attached to AWS Lambda functions to ensure that they adhere to the principle of least privilege. Such checks help identify and rectify overly broad permissions that could potentially be exploited by attackers.

The reference for this can be found in AWS best practices for Lambda security, which emphasize the importance of granting minimal privileges necessary for the Lambda function to perform its tasks, thereby reducing the potential attack surface.

NEW QUESTION # 70

On which cloud service providers can new API release information for Prisma Cloud be received?

- A. AWS. Azure. GCP, IBM
- B. AWS. Azure. GCP. Oracle, IBM
- C. AWS. Azure. GCP, IBM, Alibaba
- **D. AWS. Azure. GCP. Oracle, Alibaba**

Answer: D

Explanation:

Based on the information available in the provided documents, specifically from the "code-to-cloud- intelligence (1).pdf", Prisma Cloud by Palo Alto Networks offers integration with multiple cloud service providers. While the document does not explicitly mention the ability to receive new API release information for Prisma Cloud, it does list integrations with various cloud service providers such as AWS, Azure, Google Cloud (GCP), Oracle Cloud, and Alibaba Cloud. Therefore, the answer would be C: AWS, Azure, GCP, Oracle, Alibaba.

NEW QUESTION # 71

.....

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, so about how to get the test CloudSec-Pro certification didn't own a set of methods, and cost a lot of time to do something that has no value. With our CloudSec-Pro Exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. And you will be bound to pass the exam with our CloudSec-Pro learning guide!
